At the center of Design

Cosentino C·Top Design

The epicenter of inspiration & collaboration with design professionals.

C·Top Design is our value proposition for interior designers and architecture professionals. This program was born with the purpose of honoring a profession that is key in the present and future of Cosentino.

C·Top Design represents a shared and innovative vision, a center of ideas to accompany professionals in the definition of the new design paradigm: high-impact, value-adding spaces for contemporary society.

Through a shared code, we will amplify the designer's work and maximize exposure in the media, giving projects relevance and visibility.

C·Top Design was ideated as a publication vehicle for activities and exclusive events for the design community, through our Cosentino Cities.

C·Top Design intends to be an exposure platform for top designers and a valuable resource to foster collaboration and propel our connection with the world of design.

C·Top Design englobes a wide range of benefits, including exclusive bonuses, personalized digital services, and assistance from our specialized teams.

Here & Now

Cosentino's Digital Universe

We created a digital universe integrating two platforms that give designers access to services, inspiration, exposure, and generate demand among end consumers.

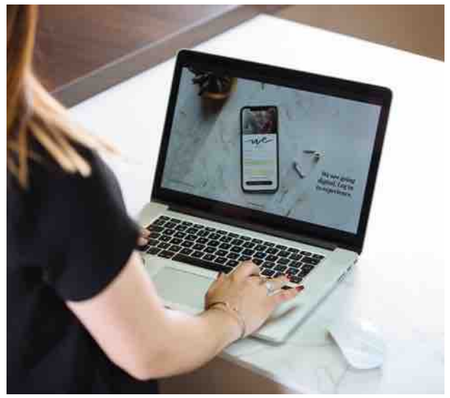

pro.cosentino.com

pro.cosentino.com is a digital platform with multiple services and advantages to be closer to you and honor your work.

At Cosentino, we want to be an ally in the world of design, be close to designers in their work dynamic and assist them in the diverse needs their creative tasks demand.

With this objective in mind, we launched Cosentino Pro: a digital platform that makes designer's day-to-day life, easier.

→ pro.cosentino.com

Request Samples 24/7

Request samples and product novelties in a simple and agile way. Anywhere in the world, available to you in 48 hours.

Inspiration

Ideas and creative proposals to join you in your interior design projects.

Price calculator

Calculate prices in a simple and intuitive way.

Resources and documentation

A complete downloadable repository of files and technical documentation.

Sales percentage bonus

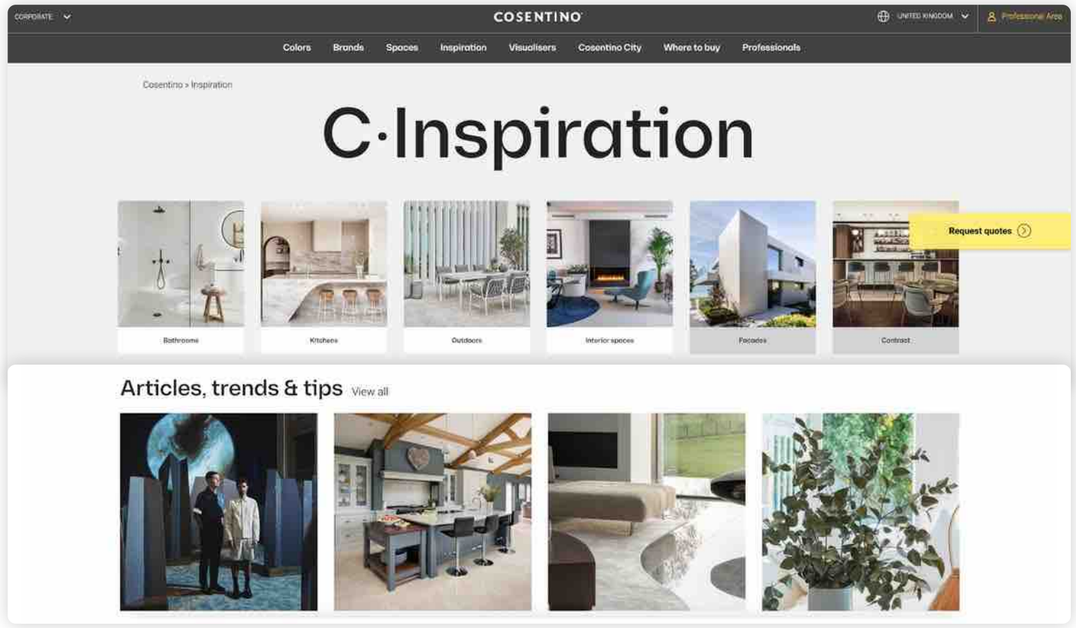

Discounts and exclusive bonuses for specifying Cosentino products.

Expert commercial advice

Pricing counseling and support which you can share with your clients.

cosentino.com

Cosentino.com is our digital platform to inspire through interior design projects and maximize visibility for our designers, generating demand among end users.

Corporate purpose

Meaningful Design to Inspire People's Lives

Meaningful

We strive to live in harmony and responsibility with nature and the environment in which we live. To practice a philosophy of life that is coherent and reasonable.

Design

We live and create spaces with character, pleasant homes and environments for healthy living.

to Inspire

We inspire and get inspired to create beautiful and functional designs that come to life.

People's

People are at the heart of our business and we aim to improve their lives and contribute to their well-being.

Lives

There is only one life and it can be lived in many different ways. That is why our products are designed to adapt to and anticipate the real needs of society.

We are Cosentino

Safety, Sustainability and Quality

Certifications

Cosentino is deeply committed to exceeding the needs of our customers and suppliers with respect for the environment though responsible resource management, guaranteeing innovation and continuous improvement of our processes, products, and services globally.

Collective Commitment

Sustainability

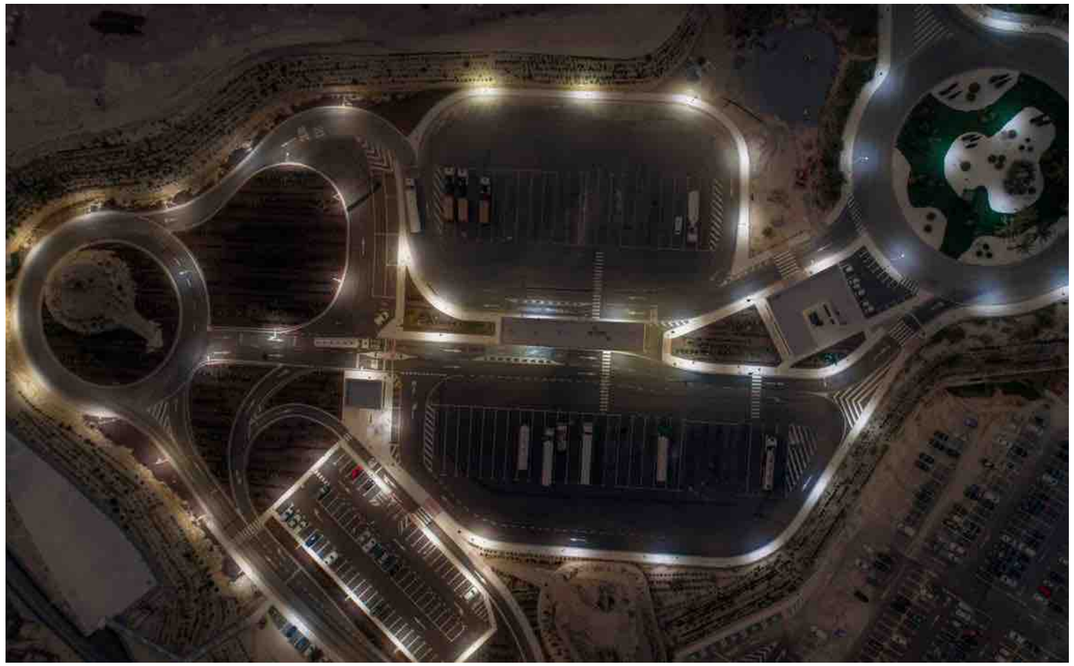

At Cosentino, we approach sustainability as a collective commitment that stems from the individual involvement of those that are a part of Cosentino.

Our continuous improvement efforts involve constant analysis of our entire value chain - from the acquisition of raw materials to the delivery of the final product of consumers.

We are firmly aligned with the United Nations' 2030 Agenda. As a global leader in the manufacturing and distribution of innovative surfaces from our headquarters in Almeria Spain, we are committed to driving the path towards local and global sustainability.

→ LED lighting throughout the Cosentino industrial park.

→ Olives in Cosentino industrial park.

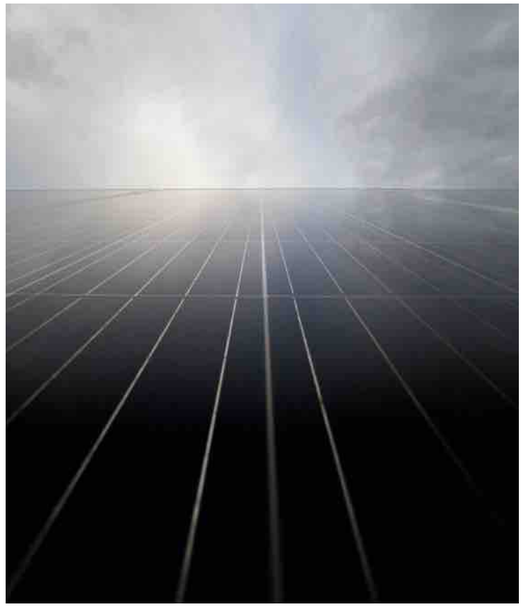

Energy

Energy efficiency and the use of renewable energy sources are the two key elements of our strategy to minimize the impact of our activities.

100% of our energy consumption comes from renewable energy sources.

On the other hand, the constant improvement of our processes and machinery allows us to reach a high level of energy efficiency, which translates in an 8% decrease of our electrical consumption in our production processes.

→ Photovoltaic installations at Cosentino

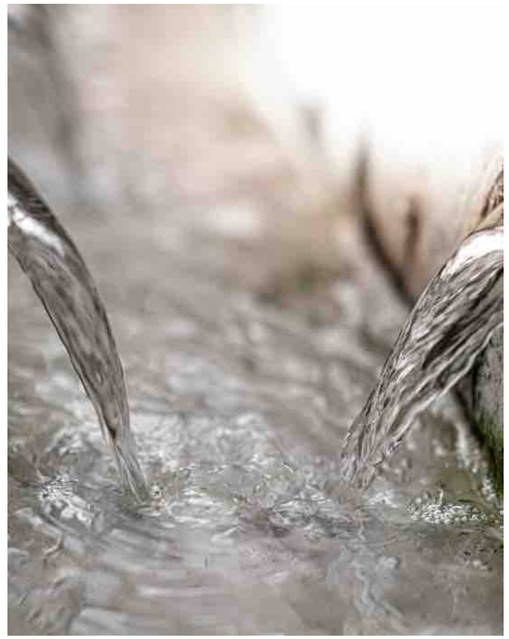

Water

Since our inception, we have valued the importance and understood the challenges of proper water management.

It has motivated us to implement a sustainable use policy maximizing the efficient use of water resources in the different production processes.

We use cutting-edge technology to achieve 99% recycled water in all our processes in the Cosentino Industrial Park.

In addition, we use 100% of the surplus water to irrigate green areas.

Materials

We are committed to making the most of the materials we work with throughout the value chain.

In recent years we embarked on an ambitious R&D project called "Circularity" to reuse the materials from which we make our products.

Another action is the disruptive Hybriq+® technology that brings about the new generation of Silestone. Hybriq+® incorporates a minimum of 20% recycled materials and is manufactured with 100% renewable energy and 99% recycled water.

Carbon neutrality: Sustainable design

COSENTINO
CO2
NEUTRAL
Cradle to Grave

Cosentino Group considers sustainable development as an essential commitment in the company's growth strategy, with regard to the respect and protection of the environment.

We address aspects related to the efficient use of natural resources, proper waste management, atmospheric emissions, discharges and other potential impacts in order to make sustainable use of natural resources and protect biodiversity and ecosystems.

At Cosentino we are strongly committed to the 2030 Agenda promoted by the United Nations and the Local Action Plan promoted by the Spanish Government.

As a demonstration of our commitment, we have managed to offset the 42,532 tonnes of CO_2 emissions resulting from one year of Dekton production, thus obtaining the Zero Carbon Footprint label for the entire product life cycle in 2019 for all Dekton brand products.

In addition, the Sunlit Days series by Silestone is the brand's first collection to achieve this certification.

CO2
NEUTRAL

We reduce our impact

We are committed to energy efficiency, emissions reduction and sustainable mobility to minimise our impact.

- **Energy efficiency:** it is a priority objective for Cosentino to reduce energy consumption in the production process and in the general group activity, which is why we have managed to obtain 100% of the electricity we use from renewable sources.
- **Emission reduction:** 2.8 million euros have been invested in the implementation of an energy management and monitoring system for the heat systems, which allows heat from the Dekton furnaces to be recovered and used in the dryers, thus reducing emissions.
- **Sustainable mobility:** we have recently joined the 'Plan Sumamos Salud + Economía' under which we have a Mobility Policy that helped us to avoid 230 TCO_2 in 2018.

We calculate our carbon footprint

It is an external body that verifies the calculation and the results of the carbon footprint that are submitted to the Spanish Ministry for Ecological Transition and Demographic Challenge (MITECO, in Spanish), which is responsible for approving and registering our Footprint, becoming part of the **'Spanish registry of carbon footprint, offsetting and carbon dioxide absorption projects'** of the Spanish Climate Change Office (OECC, in Spanish), whose results are made public as an exercise in transparency.

This calculation uses energy and/or fuel consumption data, as well as raw material consumption data collected from all **Group subsidiaries** (Centres, Workshops, Cities, HUBs, HQ, etc.) with a view to offset these emissions.

We offset our emissions

To achieve carbon neutrality in Dekton, at Cosentino **we offset our emissions over the entire product life cycle** (scopes 1+2+3) by investing in GHG emission reduction projects.

For this purpose, we identify those projects that meet the requirements for responsible offsetting and that, in turn, have a strong social dimension that contribute to the achievement of the **Sustainable Development Goals of the UN's 2030 Agenda.**

The project selected to offset the 42,532 tonnes of CO_2 emissions, resulting from one year of Dekton production, has a direct impact on sustainable development by **supporting the local economy, providing training and job opportunities.**

Dekton

25 Year Warranty DEKTON

DEKTON®
Designed by COSENTINO

The Ultracompact Surface

Dekton is the ultracompact surface. Our exclusive technological process, SPT, replicates what nature takes thousands of years to create in just a few hours, altering the internal structure of mineral particles through advanced technological enhancements, to create a superior ultracompact porcelanic surface.

Its strength, variety of formats, sizes and installation options make it perfect for all types of applications and construction solutions. Dekton is a multi-purpose material for the world of architecture and design.

→ Worktop and flooring Dekton VK03 Grigio

→ Island kitchen, countertop and cladding Dekton TK05 Sabbia/ Island kitchen and countertop Dekton VK04 Grafite

→ Bath worktop Dekton Halo / Cladding Dekton Slim Zenith furniture cladding Dekton Slim Kreta

Sintered Particle Technology

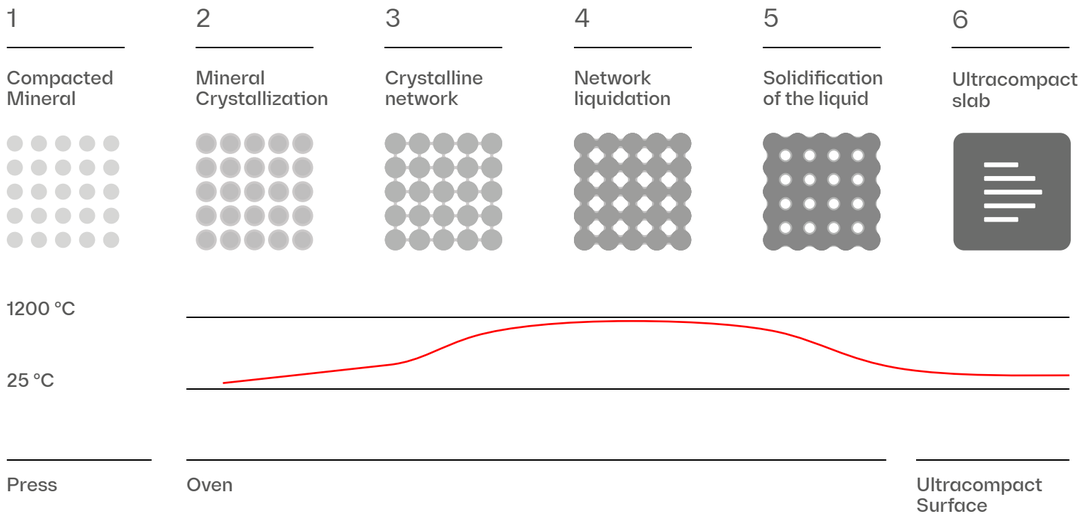

Dekton uses an exclusive SPT in its manufacturing, capable of sintering mineral particles, bonding them together and compacting their internal structure. This innovative technological process mimics and accelerates the processes that surface undergoes when exposed to high pressures and temperatures for millenia.

Dekton emulates in a few hours what nature takes millennia to do, thanks to the exclusive SPT technology.

- → The furnace has a length of 180 metres (196 yards).
- → Temperatures reach approximately 1250°C (2300°F).
- → Total processing time depends on the thickness of the slab (about 4 hours).

Safety in facades and cladding

In order to reinforce safety in ventilated facades and interior cladding, there is the possibility of adhering a safety mesh behind the Dekton slab, specially developed to prevent falls due to breakage. It is a 300 g/m² fiberglass mesh adhered to the material with epoxy resin. Safety is one of Cosentino's main concerns.

Dekton features

Dekton
Product features

Dekton meets all the technical specifications required in a high-resistance surface to materialize any interior and exterior residential design project.

Low water absorption

The water absorption of Dekton is negligible; therefore, it does not undergo expansion movements.

High resistance to UV rays

Dekton is highly resistant to ultraviolet light (UV rays) and will not fade or degrade over time in any outdoor application.

Superior mechanical strength

The wide variety of Dekton thicknesses allows its use in applications where a high wind or impact resistance are a requirement of the project.

Fireproof material

Dekton can withstand the highest temperatures without burning, charring, or cracking. The estandar European tests EN 13501 y ASTM E84 qualify the ultracompact surface as non-combustible.

Durable Color

The control of pigmentation and decoration in the manufacture of Dekton gives the material better color uniformity for each slab, resulting in a long-lasting product that does not fade over time.

Resistant to scratches

Dekton is one of the most scratch resistant surfaces on the market today. It has a rating of seven (7/10) on the Mohs scale of mineral hardness.

Dimensional stability

The expansion of Dekton is minimal: the panels can be installed with thin joints. These joints will retain their width under all conditions.

Freeze and thaw resistance

The resistance that Dekton has demonstrated in durability tests under freezing and thawing situations in various conditions proves its high performance.

Abrasion resistance

Dekton is even more resistant to abrasion than granite and porcelain, being the ideal surface for facades or floors subjected to high activity in commercial applications.

Maximum fire and heat resistance

Dekton has been successfully installed in facades located in areas exposed to high temperatures.

Easy cleaning and minimal maintenance

It is easy to remove Dekton graffiti with standard cleaning products. Reduced maintenance costs.

Resistance to stains

Dekton is a material that is resistant to stains from different sources so that they will not be permanent.

Dekton Slim

DEKTON® SL|M
Designed by COSENTINO

High aesthetic value and performance in vertical cladding and furnishings.

Minimum Thickness of 4mm ⇢|⇠ Large Format & Performance

01 → Large format and minimum number of joints

Its large format of up to 320 x 144 cm covers large surfaces avoiding as much as possible the number of joints and therefore, dirt.

02 → Easy installation

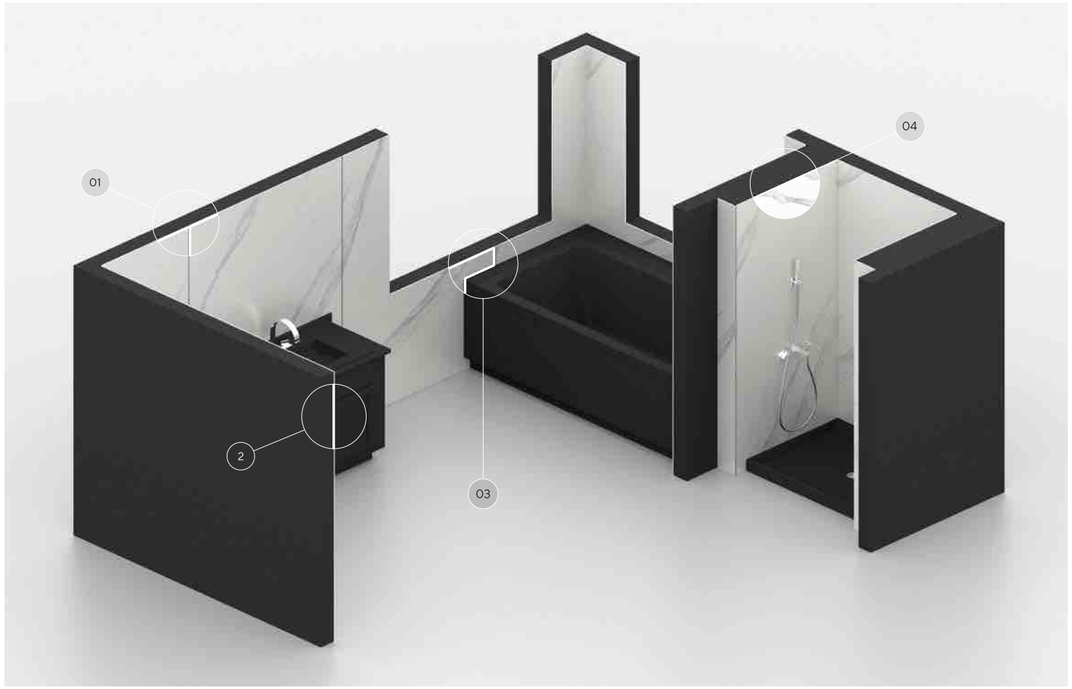

Having such a light format, but with so many possibilities, simplifies everything. Its thin thickness allows for quick cutting and on-site adjustments with ceramic tile tools.

03 → Design without limits

Dekton Slim is very easy to work with and can be cut to size. It adapts to all spaces.

04 → Maximum resistance to humidity

Dekton Slim is the ideal ultra moisture and stain resistant coating for bathrooms.
A high performance product that requires no more maintenance than a simple damp cloth.

Dekton Formats

Adaptable and versatile.
In any space.

Dekton offers a variety of standard sizes, custom sizes and thicknesses to meet the functional and creative needs of the designer in any interior or exterior project, no matter how complex.

Large format

Optimma Format → 260 x 100 cm
Large format board → 320 x 144 cm

Other formats

→ 106 x 71 cm
→ 142 x 106 cm
→ 142 x 142 cm
→ 142 x 71 cm
→ 142 x 79 cm
→ 159 x 142 cm
→ 159 x 71 cm
→ 71 x 71 cm
→ Tailor-made formats

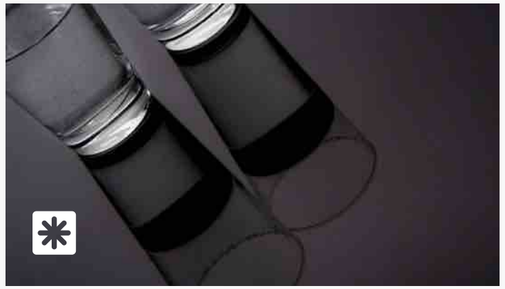

Thicknesses

→ 4 mm
→ 8 mm
→ 12 mm
→ 20 mm
→ 30 mm

Dekton Textures

Different Sensations.
Richness of Shades.

Dekton comes in different textures so that the only limit is the architect's or designer's imagination: from the finish ultra-glossy, to matte or velvety textured options.

XGloss

A luminous and dazzling finish achieved by mechanical polishing, without the need for enamels or other materials.

Matte

The matte texture pursues a natural, shine-free appearance, ideal for achieving a harmonious and timeless finish. Most Dekton products are manufactured with this finish.

Velvet

Velvet is Dekton's velvety texture. The materials chosen in Velvet create a feeling of warmth and comfort. This texture is perfect in classic colours, with veins.

Matte or Textured Velvet

Matte or Textured Velvet textures combine the warmth of velvet with the roughness of a textured, imperfect material. It is ideal for emulating a realistic finish, with the advanced features of Dekton.

Optimma

New optimized Dekton format

The ultimate interior cladding solution.

The Dekton slab has been optimized with its most common applications in mind to create a new format with improved cost, design, installation and handling. Introducing our first Optimma family format specifically for cladding:

Optimma format 260 x 100 cm x 4 mm.

260 x 100 cm in 4 mm thickness

The slabs are created in 4 mm thickness, which gives it a lightness that allows easy handling, and in case of need, it can be easily cut to adapt the product to all spaces.

Cost Efficiency

The sizes were optimized to the most common coating standards, this allows us to avoid waste, which in turn reduces price.

Design with Purpose

The board has been created to take advantage of its total height, which makes it much easier to cut it for cladding.

Easy to Install

The product is smaller and lighter, which makes it easier to use transport and handling. Cutting can be done with simple tools. The edges are already bevelled and the piece is always meshed.

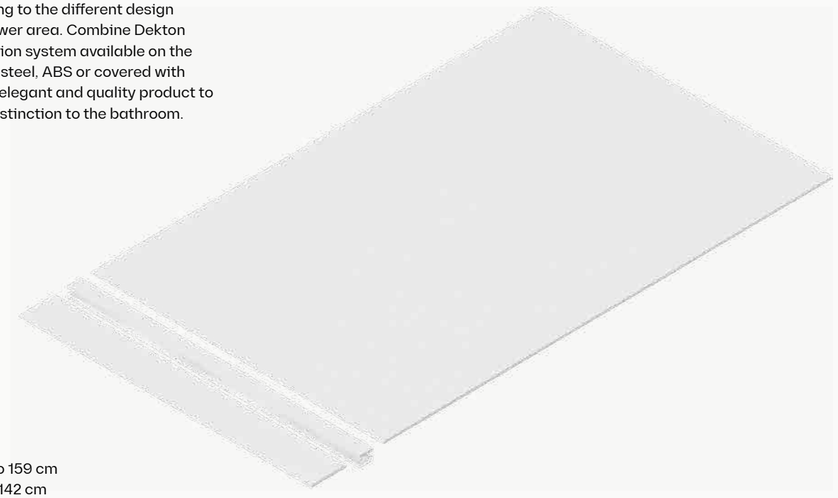

Design Match

The design has been conceived to place the boards vertically to create a continuous design.

Rainfloor

Shower floor

Solution according to the different design trends in the shower area. Combine Dekton with any evacuation system available on the market: grilles in steel, ABS or covered with Dekton itself. An elegant and quality product to give a touch of distinction to the bathroom.

Dekton Grip+
Length from 71 to 159 cm
Width from 71 to 142 cm

Match your style with Dekton

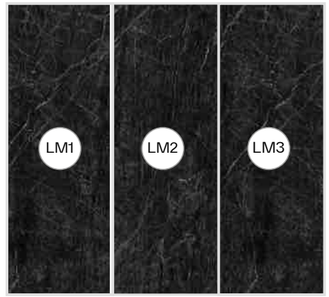

Dekton Design Match

There are designs that leave their mark. Veins that run along walls and continue on floors and facades with patterns that would be impossible for a natural stone, but not for Dekton.

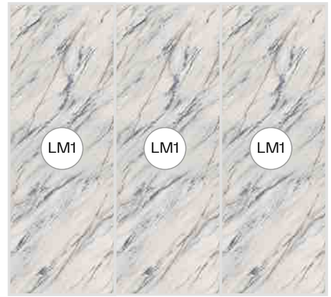

Lineal Match

We present a new concept that includes references of the same colour to create a fluid and continuous atmosphere. Focused on large-area flooring and vertical cladding applications.

A new design conceived to position the slabs vertically. The slab is rotates 180° in each of its iterations, thus creating a continuous and harmonious design.

Dekton Somnia
Available in 4, 8, 12 mm and
Optimma format 260 x 100 cm x 4 mm

Dekton Trance
Available in 4, 8 and 12 mm thicknesses

Dekton Marina NEW
Available in Optimma format
260 x 100 cm x 4 mm (LM1, LM2 and LM3)

Book Match

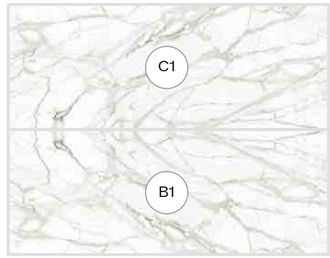

Based on some of our designs, we have created unique, symmetrical and interchangeable references that allow compositions and designs to be made where the veins have continuity between different pieces.

Each piece has a unique combination of numbers and letters to select the patterns that best suit your needs according to colour and available thicknesses.

Material on request, check availability.

Timeless elegance with a Mediterranean soul

New Collection

Pietra Edition

Designed by
Daniel Germani

Once again, the ultra-compact Dekton surface is here to decode the most iconic natural stones thanks to its exclusive technology.

With an innovative, modern andavant-garde approach, Dekton pays homage to the timeless elegance of Mediterranean natural stones while enhancing their design, characteristics and sensory perception.

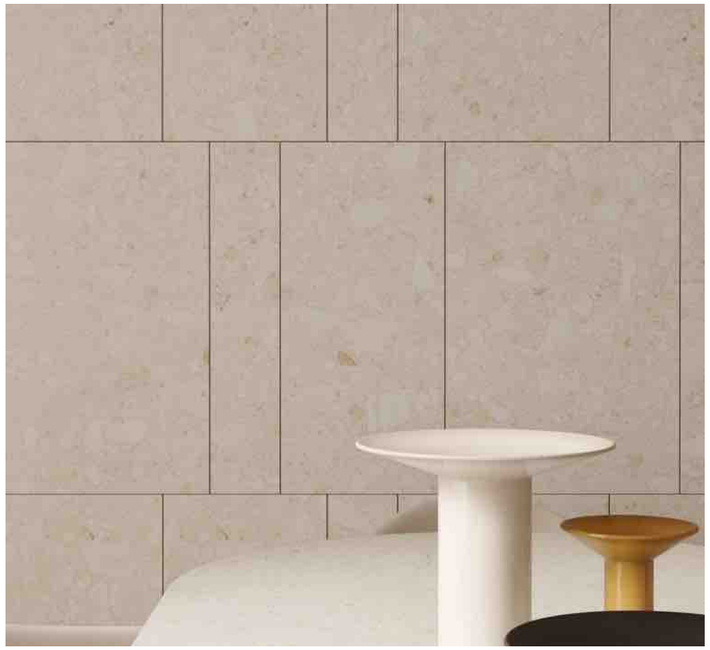

→ Kitchen island Dekton Adia / Flooring Dekton Sandik / Cladding Dekton Ava

Trevi

With a cream background crisscrossed by a parallel pattern of unique veins in shades of gray and blue, this color is inspired by the classic beauty of Roman silver travertine. A classic stone that influenced the Eternal City's architecture today infuses personality to interior design and architecture with contemporary lines.

Ava

We have drawn on the distinctive, multiform structure of the Italian stone Ceppo di Gré to create an innovative finish in shades of cream never before seen in nature. A warm design, particularly suitable for large flooring and cladding applications, both indoors and out.

Sandik

The traditional elegance of Spanish Crema Marfil marble with a smooth finish, creamy backdrop, and subtle hints of gray. A perfect color for minimalist designs with a warm touch, suitable for use in all types of projects, from interiors to floors and facades.

Adia

A versatile color with a silky finish inspired by Italian Piasentina stone, which dynamically recreates a subtle brown marbling and light white veining over a soft cream canvas.

→ Flooring Dekton Sandik / Facade and Firepit Dekton Ava

Nebu

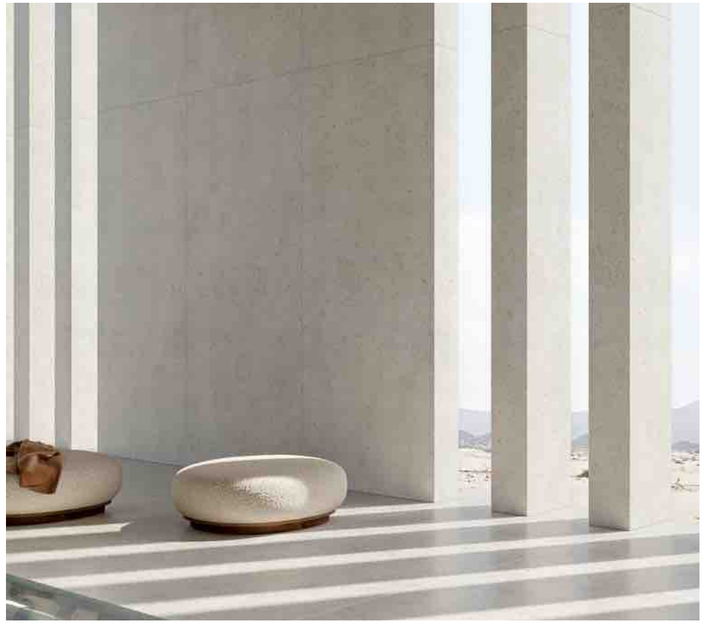

This color's hyper-realistic design perfectly recreates the depth of Roman travertine's infamous porous structure, but with a non-porous finish that brings strength and beautiful irregularities to add timeless singularity to any design.

Polar

A reinterpretation of the visual richness of Campaspero stone and its perfect imperfections. Its realistic patterns combine an irregular beige canvas intercepted by gray and cream veins and subtle fossil inlays. The beauty of classic limestone recoded with the strength of Dekton.

→ Kitchen island countertop and cladding Dekton Ava / Flooring Dekton Sandik

silestone®
MINERAL HYBRIQ SURFACES

Silestone

The first low-silica surface

Silestone is a low-silica mineral hybrid surface composed of premium minerals and recycled materials, powered by the revolutionary Hybriq+ technology.

Silestone advantages

Silestone is extremely durable in kitchens, bathrooms and other spaces exposed to constant activity and use, including furniture. In addition, it offers an unlimited range of colors and textures.

Silestone has many advantages, including minimal maintenance, high resistance to stains and scratches, and extremely low fluid absorption rate. This resistance to fluids and its minimal joints make Silestone the ideal solution for places where liquids and humidity are present. Silestone is resistant and allows for prolonged enjoyment over time, beyond what is expected.

Silestone's properties are the result of constant years of innovation that guarantee maximum hygiene and safety.

25 year
warranty
silestone

Acid and Scratch Resistant

Silestone has a high level of resistance to scratch and scuff, as well as to external aggressions and acids common in daily kitchen use.

Stain Resistance

Silestone is a non-porous surface that is highly resistant to stains from coffee, wine, lemon juice, oil, vinegar, makeup and many other everyday products.

Impact Resistant

Silestone's high impact resistance allows the handling of hard objects (pots, pans, trays, etc.) with total peace of mind.

Silestone Formats

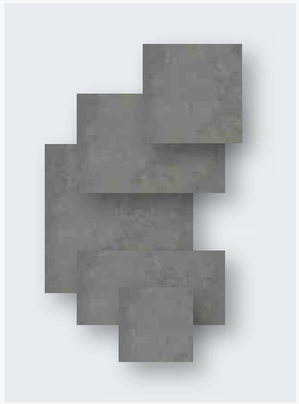

Infinite possibilities for indoor applications.

Silestone is available in slabs of up to 327 x 159 cm and in 30 x 30 cm, 40 x 40 cm, 60 x 60 cm, 60 x 30 cm and 60 x 40 cm tiles. They are marketed in thicknesses of 12, 20 and 30 mm. In addition, different pieces can be combined to simulate thicker edges.

Large format

Jumbo Boards → 327 x 159 cm
Standard Boards → 306 x 140 cm

Floor format

- → 30 x 30 cm
- → 40 x 40 cm
- → 60 x 60 cm
- → 60 x 30 cm
- → 60 x 40 cm
- → Tailor-made formats

Thicknesses

- → 12 mm
- → 20 mm
- → 30 mm
- → Customised thicknesses by adding different pieces together

Jumbo Slabs

Cosentino offers Silestone slabs in Jumbo format (327 x 159 cm max.). This format allows for the creation of large surfaces with minimal jointing, design versatility, and better hygiene. This way, the slabs' use is optimized and waste minimized.

Silestone Textures

Surface sensory perception.

In order to adapt to all styles, Silestone offers different textures for any of its applications. Polished, Suede or Volcano are three possibilities that make your imagination fly and have the worktops, floors or walls with the texture you have always wanted.

Polished

Extreme gloss, smooth surface to the touch and uniform, intense and consistent colour.

Suede

A matte appearance that conveys a unique experience to the touch for its beauty and fineness.

Volcano

Rustic and rough texture, at the same time attractive, soft and pleasant to the touch.

A carefully selected range of premium minerals chosen for their attributes and capabilities, gives Silestone XM its nuances, shine, color, depth and resistance.

MINERAL

SILESTONE XM IS THE DESIGN MINERAL SURFACE MADE OF PREMIUM MINERALS WITH LOW CRYSTALLINE SILICA CONTENT AND RECYCLED MATERIALS

Unique and personalized spaces, full of colors and depth in perfect balance where quality is paramount. Transform your home into an oasis of elegance that endures over time.

Ongoing conversion to Q10 starting in 2024.
Always look slab back side and edge label.

HYBRIQ® Mineral inside Q10

UNIQUE PATTERNS & DESIGNS

Elevate spaces with elegance and sophistication, creating unique environments.

REAL FULL BODY

Integrated veined design across the entire surface & thickness enabling finishes on edges and recesses with full continuity.

NATURAL STONE TOUCH & FEEL

An authentic look and feel that recreates the texture, depth, and warmth of natural stone, but with greater resistance and practicality.

MINERAL COMPOSITION

High performance, low maintenance and resistance to impacts and thermal shock by recently used pans, with a maximum of 10% crystalline silica.

SUSTAINABLE INNOVATION

Crafted with our exclusive Hybriq+® technology, utilizing a minimum of 20% recycled materials, such as glass, in the surface's composition.

VERSATILITY IN INTERIOR SPACES

Its design and double-sided polishing makes it versatile for interior applications in kitchen, bath, and furniture, such as countertops, cladding, sinks, trays and tables.

THE FIRST LOW-SILICA SURFACE

Our Hybriq+ technology drastically reduces the content of crystalline silica until 10% thanks to an exclusive combination of premium minerals and recycled materials, such as glass.

SUMA

Color Series

Let your space exude calmness and serenity with high-performance low-crystalline silica colors.

The colors of Silestone's new high-performance low-crystalline silica series are inspired by four elegant cream-white base stones with subtle veins.

In a world of constant overstimulation, let your home become an oasis of peace and relaxation through simple design and sleek, bright surfaces.

→ Kitchen island, countertop and cladding Silestone Linen Cream

Siberian Frost

A reinterpretation of classic Calacatta marble with a pattern of warm river-like grey veining.

Persian White

Inspired by the simplicity of its namesake, Persian White has a mixture of uniform cream veins and an organic dynamic structure. A versatile white suitable for any space craving luminosity and warmth.

→ Kitchen island, countertop and cladding Silestone Siberian Frost

→ Kitchen island, countertop and cladding Silestone Linen Cream

Motion Grey

This color reinterprets a grey limestone with a warm finish unique to the Silestone palette. The subtle two-tone background has a granite structure that provides texture to a design marked by veins of warm tones distributed throughout the surface.

Linen Cream

Inspired by the neutral and cream tones of limestone, Linen Cream plays with a rich, yet subtle, pattern of uniform veins in a two-tone play in the beige range.

→ Bathroom countertop Silestone Linen Cream

New Collection

Le Chic Bohème

The essence of Parisian sophistication and bohemian flair comes to life in Le Chic Bohème.

A new collection where elegance and freedom reign supreme. Le Chic Bohème is the echo of inspiration of the City of Lights.

silestone® XM

LE CHIC BOHÈME

COLLECTION

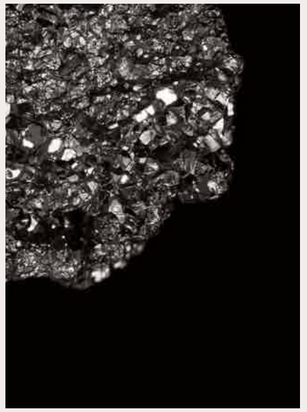

Le Chic Bohème by Silestone XM merges the beauty of natural veined stone with the technological innovation of Silestone XM, using the exclusive Hybriq® technology to create a high-performance low-silica mineral hybrid surface with outstanding beauty and the look and elegance of natural stone.

The four new color structures of Le Chic Bohème awaken the imagination with their unique shades, elegant veining, and nuanced patterns, marrying depth and sophistication to celebrate individuality and a passion for authenticity.

Journey into a radiant landscape where art and style intertwine.

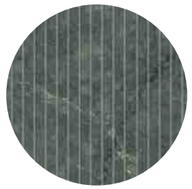

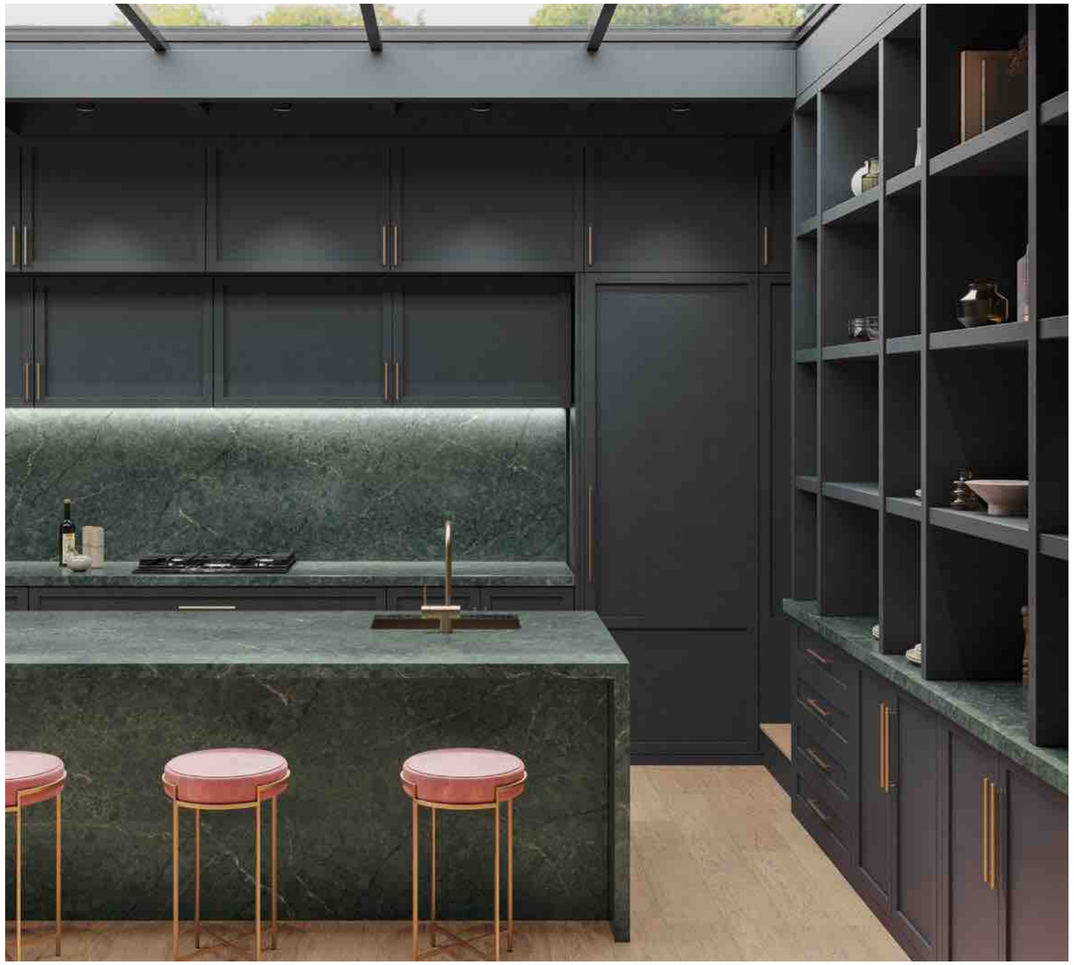

JARDIN EMERALD

Nature's symphony captured in hues of green, evoking the beauty of Parisian gardens on a sunny day.

Thanks to a sophisticated pattern of golden veins with metallic accents and black and cream color notes, Jardin Emerald reinvents the natural beauty of the most exclusive green marbles, creating a versatile finish with great graphic depth.

Finished with
UKIYO GV3

BLANC ÉLYSÉE

The timeless elegance of Paris is captured in this classic design, where warm and cool tones create a chic yet unexpected proposal, accented by gold, copper, and gray veining.

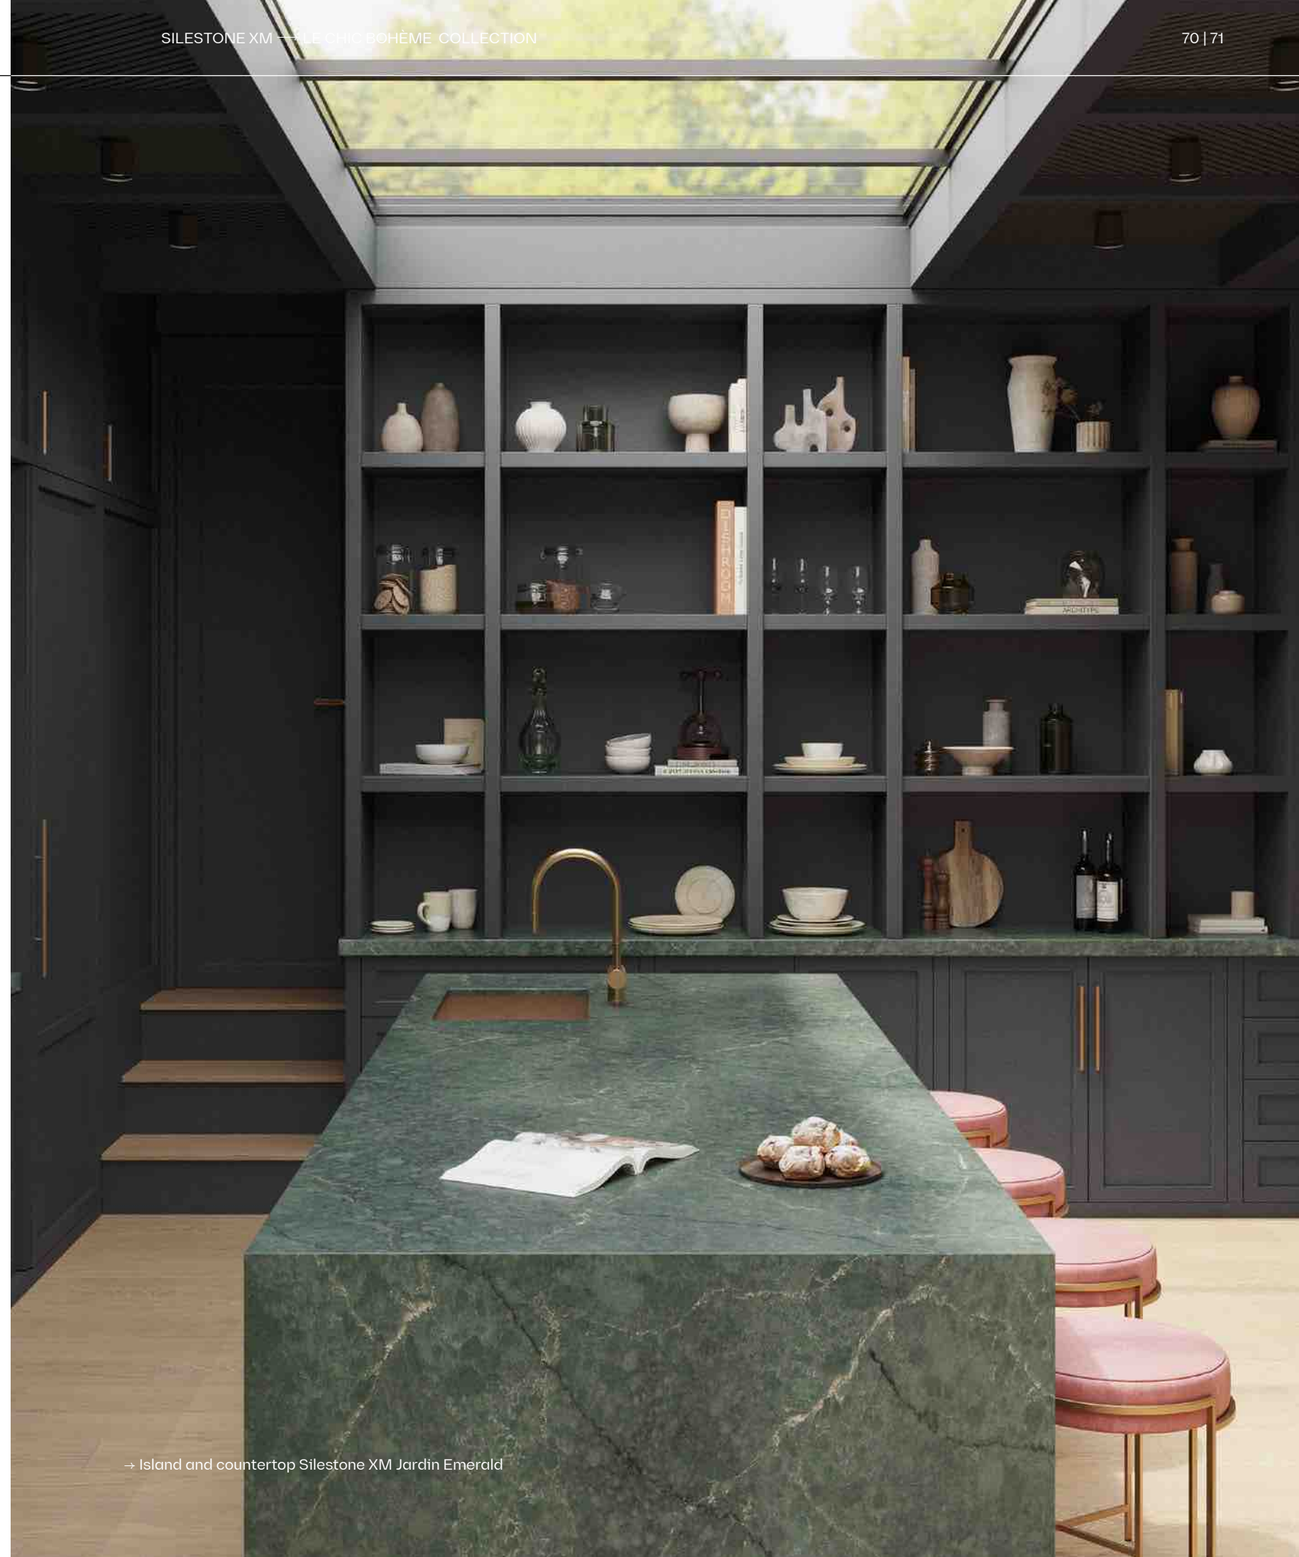

A delicate lattice of golden, gray, and copper veins along with graphic depth runs through a bright cream background that updates the timeless elegance of classic Parisian palaces.

RIVIÈRE ROSE

Transport yourself to the sun-kissed shores of the French Riviera with this warm white canvas adorned by blush pink and taupe veins.

An relentless sea of taupe and blush pink veins give personality to a warm white background. Rivière Rose pays homage to the whimsical patterns of ocean waves as they break on the coast of the French Riviera.

CHÂTEAU BROWN

This shade embraces wisps of copper pink and bronze veining that intertwine to create a one-of-a-kind composition eliciting a connection to the earth with an elevated sophistication.

A subtle marble look over an elegant dark brown background is filled with light and reflections of metallic pink-copper and bronze veining. A daring composition that connects with earthy tones and on-trend design.

Earthic is more than just a surface

New

EARTHIC®

BY SILESTONE XM X FORMAFANTASMA

Earthic is not just a product, it is a Cosentino research project on materials and sustainability in collaboration with the iconic studio Formafantasma.

Earthic is a sustainable surface with a maximum of 10% silica, created with an innovative composition and complex production process, that is the result of years of R&D. It utilizes a selection of premium minerals, recycled glass, PET, bioresin, and Dekton fragments to reduce the extraction of raw materials, limiting soil erosion and CO_2 emissions. Additionally, it's manufactured with 99% recycled water and 100% certified renewable electric energy.

Earthic incorporates up to 30% recycled components into its eco-conscious surfaces.

EARTHIC X FORMAFANTASMA

Formafantasma is a research-based design studio investigating the ecological, historical, political and social forces shaping the design discipline today.

Cosentino has partnered with design visionaries, Formafantasma, to craft a new collection that explores innovative and sustainable material sources.

Formafantasma brings forward a new approach to surface design.

Live your space

Rediscover your home's living space

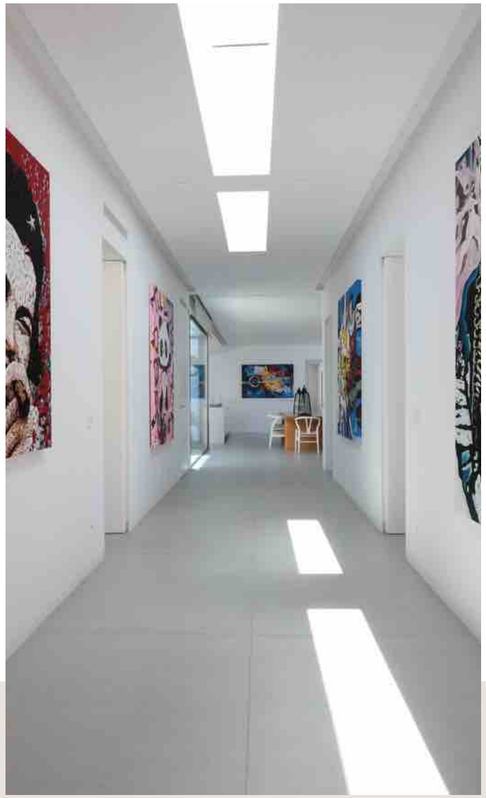

An integrated solution with maximum versatility and functionality.

Endless personalization possibilities.

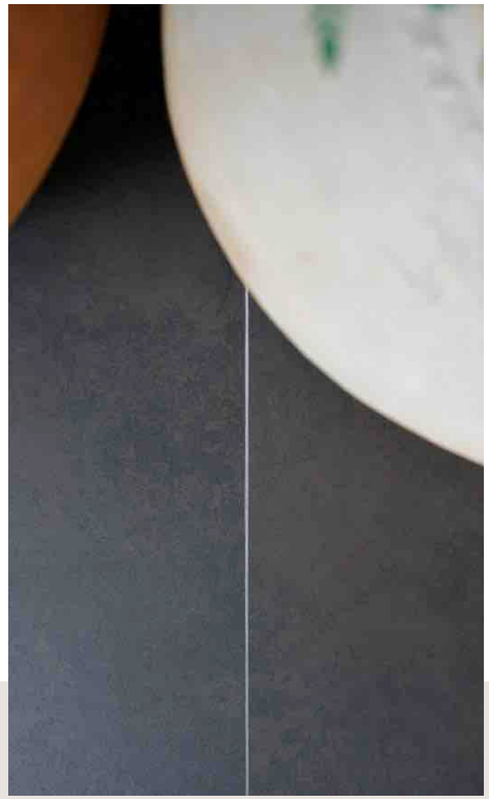

Limitless customization

Designing a living room with high aesthetic value requires versatile surfaces in a variety of colors, textures, and unique chromatic pantones, such as Dekton and Silestone, which will cover floors, furnitures, cladding, and more, to create an integrated and differential interior design experience.

Resistance to high traffic

Dekton is an innovative surface with a high level of resistance, capable of withstanding high temperatures, ultraviolet rays and any scratches. It remains unalterable to wear and abrasion, as a result of the high daily traffic in a room such as a living room.

Easy installation

Dekton is offered in a Slim format which is light, easy to cut, and adaptable to every space. Its thin thickness of 4mm allows adjustments to be made during installation, using tools for ceramic tiles.

Comprehensive solution

The same material for flooring, cladding, and furniture created visual continuity and high aesthetic impact, unifying spaces and increasing their functionality.

New Dekton Optimma Format

Dekton has been optimized for interior cladding. The Optimma format (260 cm x 100 cm x 4 mm) allows for cost efficiencies, more design possibilities and easy installation and manipulation. The results: impactful cladding and integrated spaces.

Large format, minimal joints

Dekton Slim's large format up to 320 x 144 cm and thickness of 4 mm allows you to cover large surfaces creating a continuous and homogeneous aesthetic for cladding and furniture. This size reduces the number of joints, easing cleaning and maintenance.

01/
Living Space

Dekton goes where concrete can't, creating this magazine-worthy home in New Zealand.

A contemporary home with large windows that frame the stunning views of the Manawatu River. This is the project that Nicola Ross' studio in Auckland, New Zealand, created at the request of a young professional couple who discovered that they were expecting a baby during the construction of their new home.

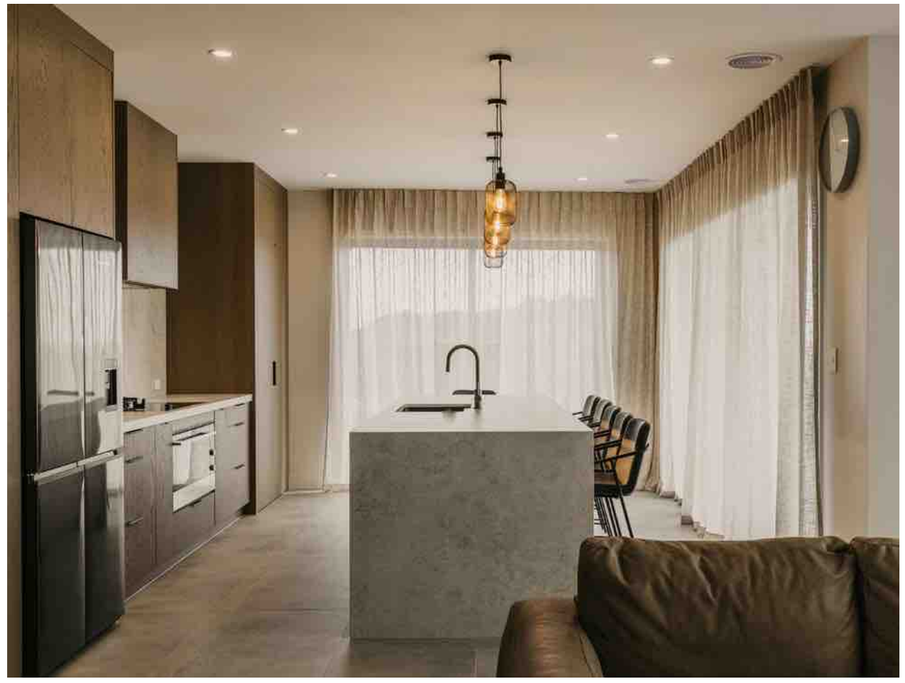

"They were looking for a relaxed atmosphere, a place where it would be easy to live". As a result, one of the studio's biggest challenges was the need to create an inviting interior even in areas with the hardest surfaces. And so it was to Cosentino materials that they turned. "For this project, we kept our material palette simple, with warmth and texture as the main drivers in the choice of products. We found in Cosentino's range everything we needed to achieve this, both aesthetically and functionally," explains Ross.

Live your space

Dekton Lunar for a concrete look, but more versatile and durable.

One of the best examples of this is the kitchen island in Dekton Lunar, a reinterpretation of traditional concrete that captures the essence of industrial aesthetics. "Our customers wanted a textured concrete island, but while they loved the look of real concrete, they didn't want to deal with the maintenance of it. The choice of Dekton was therefore a wise one, both for the design and for its use in the worktops and cladding throughout the room, achieving results that wouldn't have been possible with concrete in this project. In addition, the durability of the product was a key factor in its use," she asserts.

→ Kitchen worktop and island, cladding, furniture, flooring Dekton Lunar

Dekton Lunar was also used for the vanity top and in the 'family room' and media room. "The media room is the perfect place to get away from it all. It can be used at many stages of life: for film nights, as a reading room, as a teenage hangout and much more. We liked the idea of incorporating storage to keep things tidy, with a few shelves to display important items," says Ross.

02/ Living Space

From the facade to the dining table: this home is clad in Dekton ‘everywhere’.

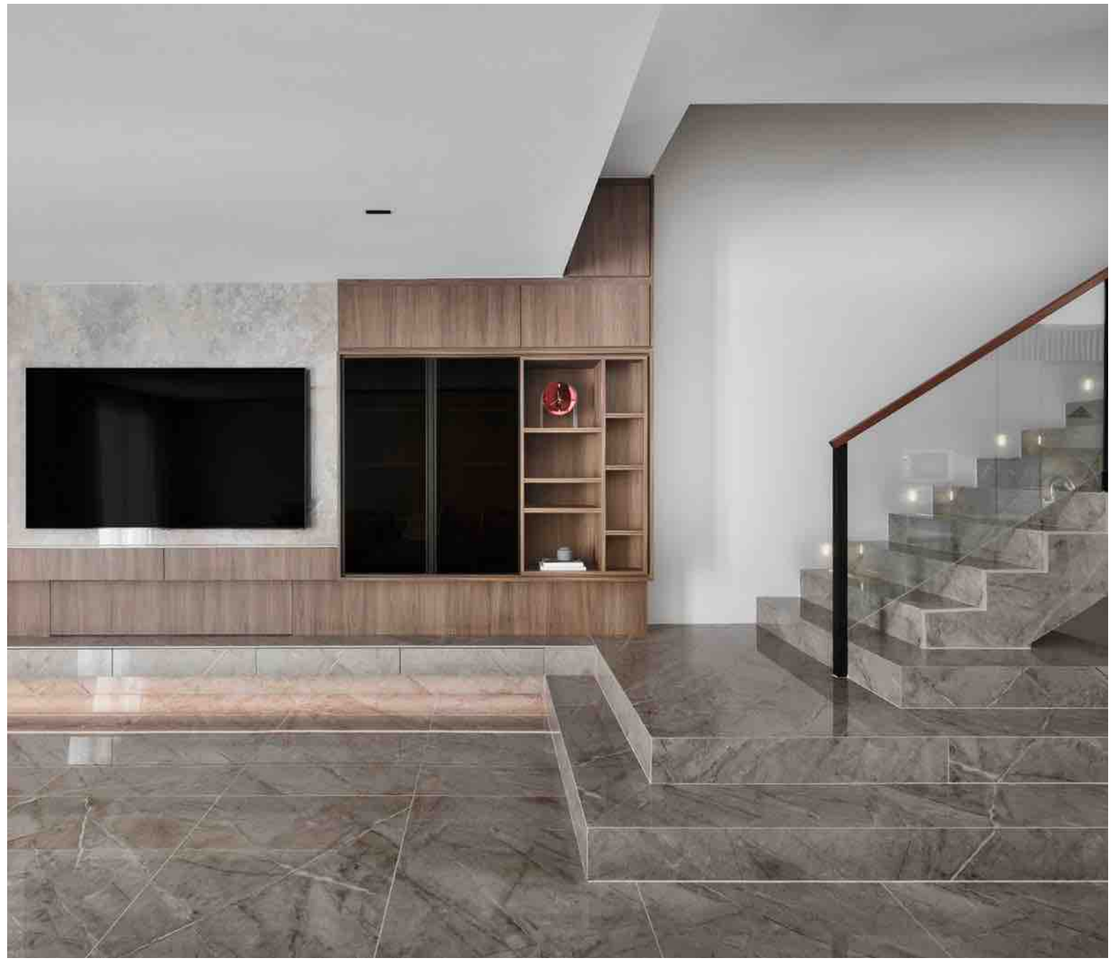

This house, named Terrace House by the studio, features Cosentino materials throughout, from the facade to the dining table. “We wanted to use as large a surface as possible to clad the bathroom, which is very difficult to find on the market”, the studio says.

The strength, durability and ease of installation of Cosentino slabs were key to the professionals’ choice: “They do not warp and are available in thicknesses of 4 mm and 8 mm for wall cladding. We also used them for the floor, so no grouting was necessary”, they further say.

Colour was also a very important factor in the decision to ‘fill’ the house with Dekton: “Cosentino is always coming up with new designs to excite us designers, as we tend to get bored easily”, the professionals joke.

→ Flooring, stairs, cladding
Dekton Sogne

→ Kitchen worktop
Dekton Albarium

The stunning dining table features a bespoke tabletop made of another Cosentino material. Specifically, the surface chosen was Sensa Taj Mahal, whose overwhelming intensity conveys the visual richness of nature to the space.

The stairs in the living area are made in Dekton Stonika Sogne, a colour with touches of natural stone and concrete on a veined background that dazzles thanks to its XGloss finish.

An extraordinary Kitchen with Dekton Khalo and Dekton Albarium

Dekton surfaces are also present in the kitchen. The walls of the island feature Dekton Khalo, a colour inspired by the world-famous Patagonia natural stone, while the worktop and front are clad in Dekton Albarium. This off-white colour is very special, as it features transparencies and colour gradations typical of Roman stuccoes that imitated white marble. Although it has a matt finish, depending on the incidence of light, reflections and sparkles that simulate marble dust can be seen.

03/ Living Space

Flooring enhance the design of this Mediterranean villa.

'A house for living in the landscape, a large living space, a house that is a territory, an organism to be inhabited' is how the architects from the studio of José Jiliberto describe this villa in the Torrox Park area of Málaga (Spain). Its sinuous curves cut across the horizon, blending in perfectly with the Mediterranean landscape and paying homage to the light of the Costa del Sol. The architectural design is also fully adapted to the unevenness of the site, with the main house and an annex forming a single unit. The focal point is a large horizontal hall that articulates the spaces and adapts to the topography.

The architects opted for Cosentino's ultra-compact surface to create an aesthetically coherent design with top technical qualities. Specifically, Dekton can be found in all its splendour as cladding for all facades and floors, both inside and outside houses. 'We chose Dekton for its exclusivity and quality. In addition to the technical properties of the material, its colour and texture,' says architect José Luis Jiliberto Herrera.

—

Architecture
José Luis Jiliberto Herrera

→ Flooring
Dekton Nilium

A solid and aesthetically pleasing floor in Dekton.

The minimalist concept of this colour, from Cosentino's Industrial range, is inspired by silver metal. Its delicate appearance, which depicts the beginning of an oxidation process, brings a contemporary character to all rooms: kitchen, dining room, living room, bedrooms and bathrooms.

05/ Living Space

An exceptional modern haven facing the Aegean Sea that uses Dekton to blur the boundaries between inside and outside.

There are houses with a design that takes your breath away. Perched high on a hill overlooking the sea, this is clearly one of them. Its open plan design, fully oriented towards the sea, its common areas and even its master bedroom stand out for their ability to blend indoors and outdoors through the use of glass and similar materials in these spaces of neutral and warm shades.

However, what is more striking about the architecture of this modern villa is, without a doubt, its vast swimming pool, which borders the entire front perimeter of the house. In addition, to enhance the feeling of indoor-outdoor integration, water is 'brought' inside, making it accessible from the living room through a large glass door.

—

Architecture / Design
Dermice Norms

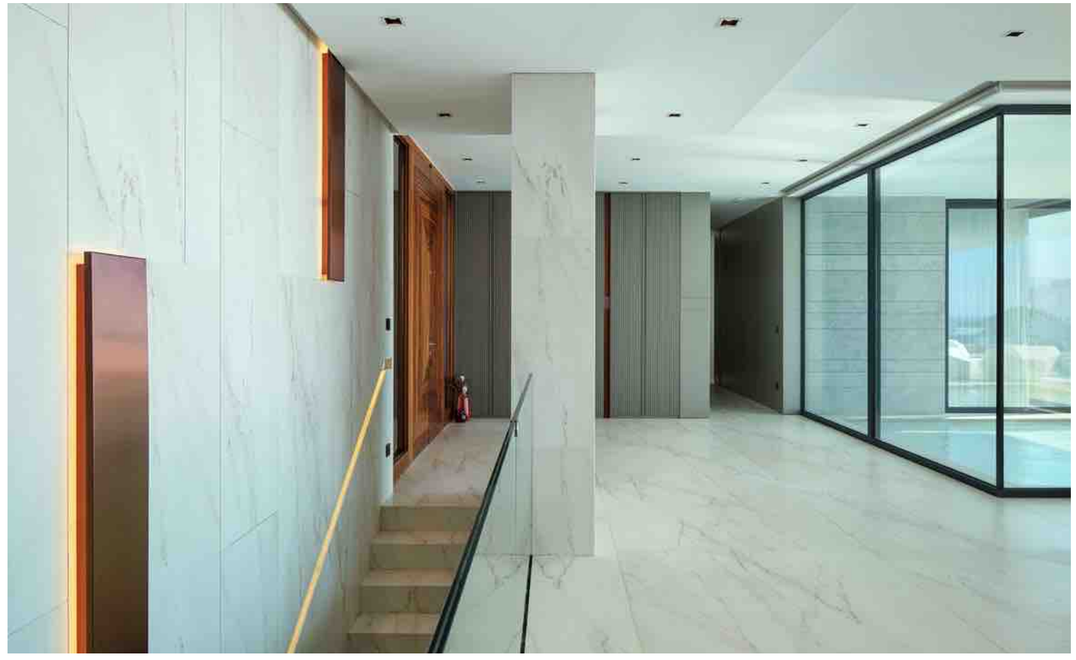

The marbled look of Dekton Rem for an elegant and refined finish.

For this project, Dekton Rem was used to clad different walls, floors and pieces of furniture, as well as the kitchen worktop and island. Even the outdoor furniture was clad with this high performance material, giving the house a homogeneous appearance.

→ Kitchen wortop and island, cladding, flooring, outdoor applications Dekton Rem

06/ Living Space

Dekton Kreta brings a sense of unity and sophistication to the extension of a villa's minimalist interior design.

The contemporary wood and glass extensions feature large windows, creating a seamless transition between indoor and outdoor spaces. The same openings have been replicated throughout the house to harmonise the style of the two units, giving the old building a brighter, more contemporary aesthetic.

Its design is homogeneous and restrained, although it includes darker or lighter areas depending on the density of the pattern, adding visual interest. "The exceptionally irregular finish of each piece contributes to the sense of quality of the space in each room," say the professionals. In addition, the matt texture and shade of grey perfectly complement the black-painted metal of the windows and openings, as well as the wood used throughout the structure.

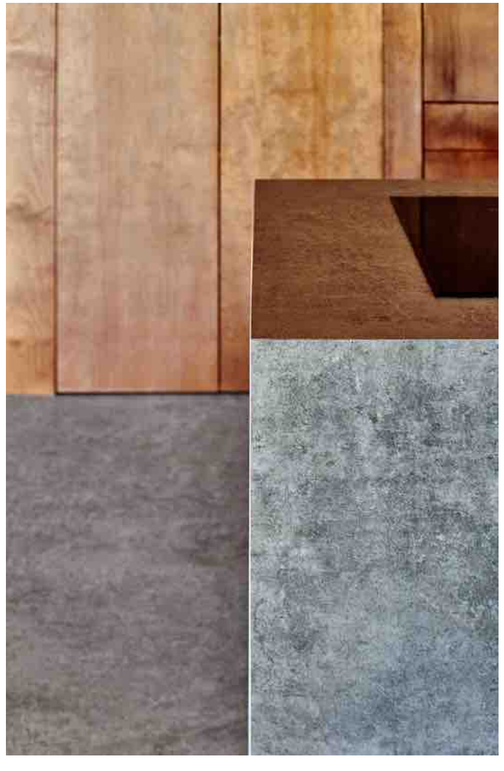

—

Architecture / Design
G34 Arquitectos

Dekton, a versatile material ideal for creating continuity throughout the space.

To maintain this sense of continuity, architect Ignacio Marqués Martínez decided to use the same floor throughout the space. The material chosen was Dekton Kreta ultra-compact surface, which, inspired by classic cement floors, brings a sense of calm to the environment.

→ Kitchen island and flooring
Dekton Kreta

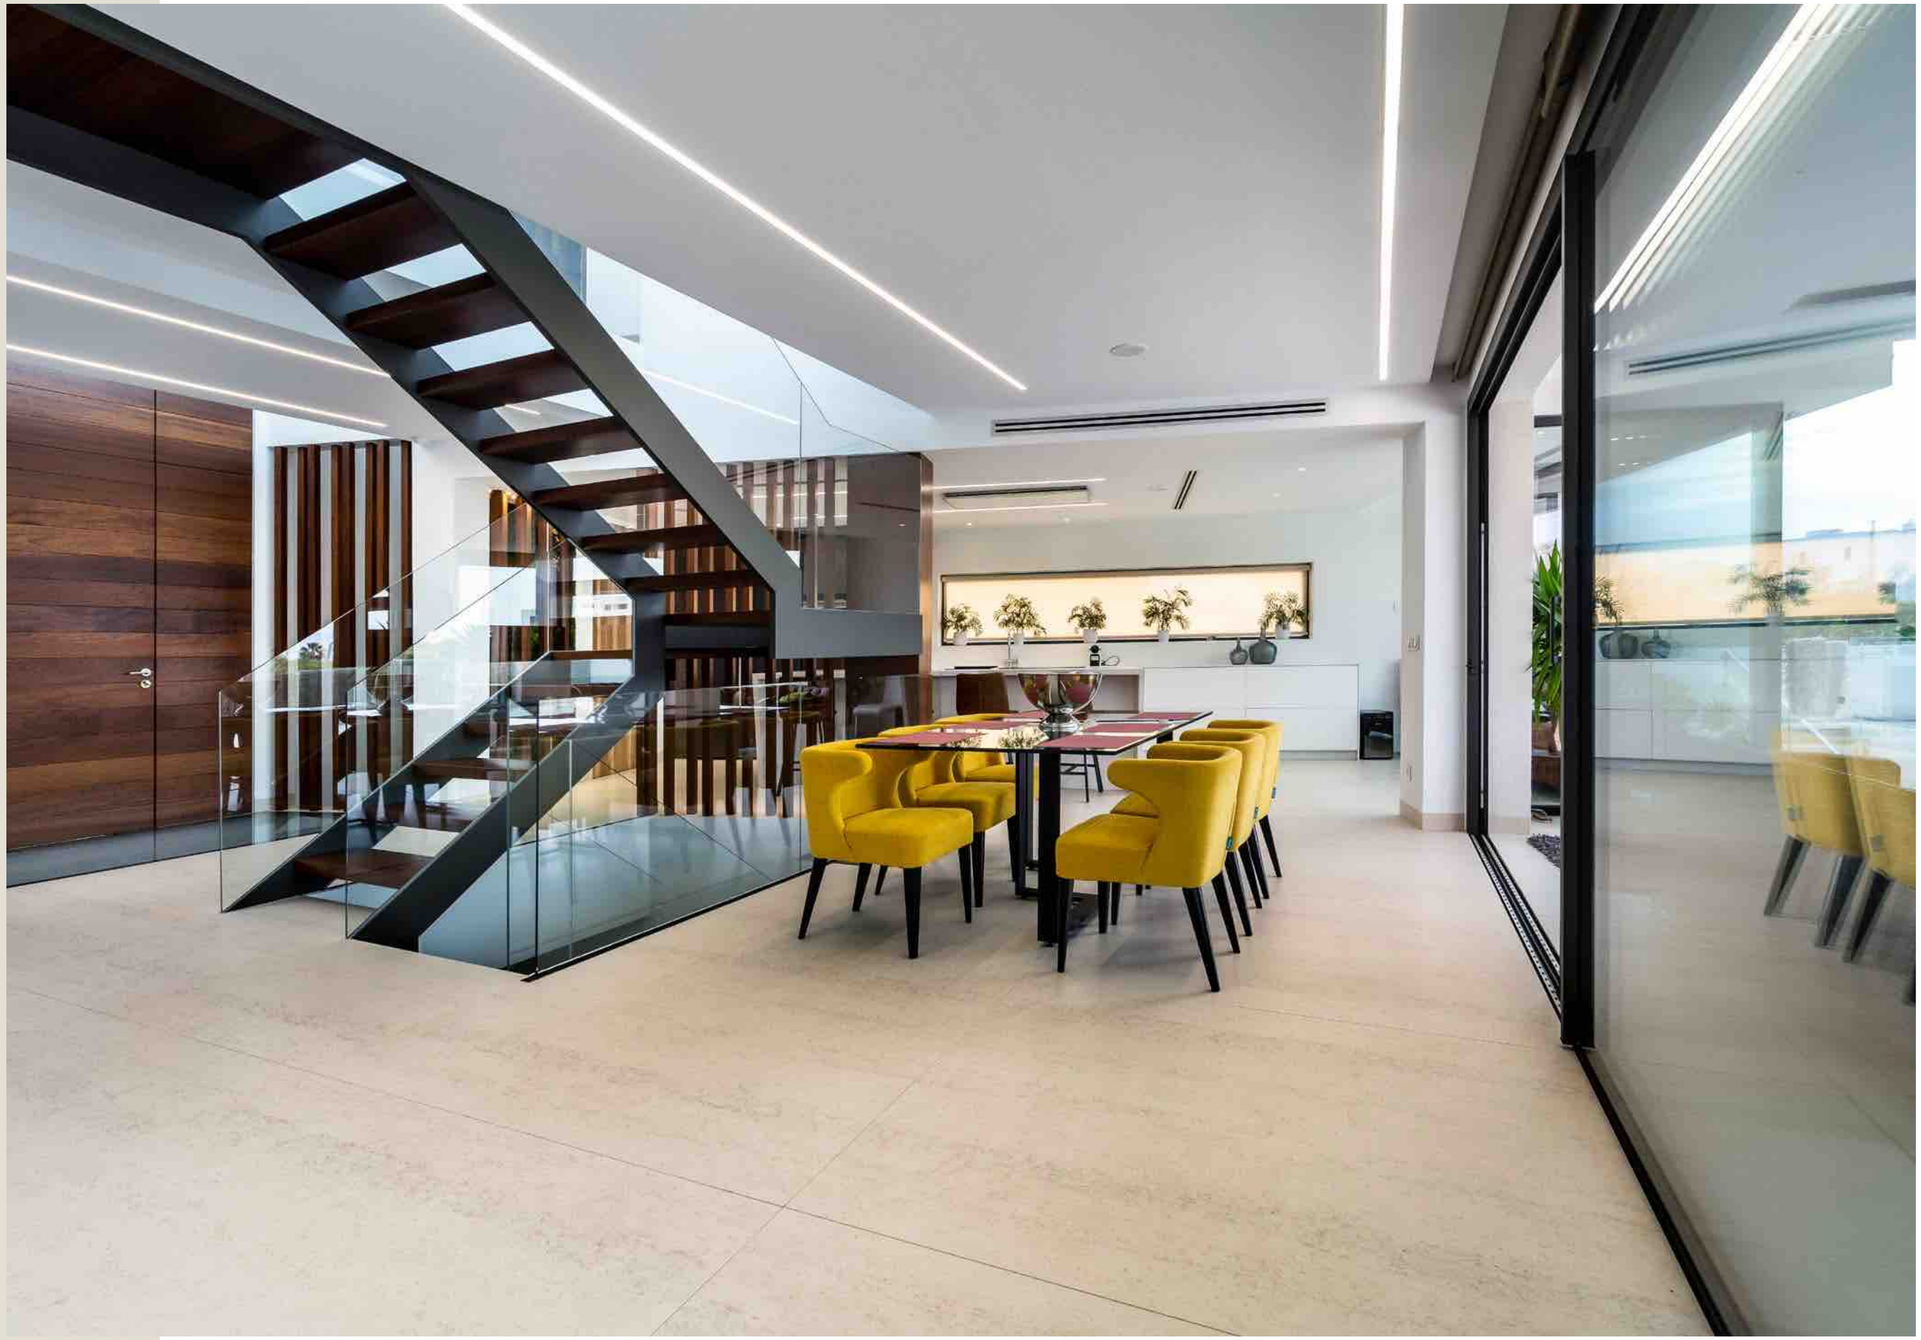

07/ Living Space

Ochre color range whith iron and glass to reinventing classicism.

Sophistication and mid-century style with Dekton Danae throughout the home.

In this living room, the designer's aim was to maintain the classicism of dark wood and mustard velvet armchairs together with a modern cantilevered iron and glass staircase. This results in a seamless look thanks to the color balance provided by the large-format Dekton Danae flooring.

Alberto Rojas

→ Flooring,
Dekton Danae

A format for every space.

The designer of this home has used large-format Dekton Danae slabs for flooring. This creates a very neutral and uncluttered effect, helping to highlight the designer furniture, such as the Barcelona chair.

The staircase allows for a different format, giving the impression of floating in space.

Cosentino Bathrooms

Cosentino helps you to rediscover your bathroom through a unique and integrated design concept.

Bathroom Spaces

Reimagine the most personal space in the home. Create a unique experience in which the most beautiful and functional Cosentino surfaces transform unique, warm, and exclusive spaces.

From wall and floor claddings in different yet perfectly balanced formats, colors and textures, to attractive vanities and shower trays, carefully designed with great attention to detail and simplicity.

Solutions of great aesthetic and functional value to suit every requirement and style of bathroom, which redefine the way in which we experience such a personal space and feeling of well-being.

Large format

Large format, minimal joints. Tailor-made floors and wall cladding.

Bathrooms are exposed to constant activity. Using a high-quality surface for floors and cladding reduces joints and guarantees hygiene and cleanliness.
The strategically placed slabs in XXL make the room look bigger, creating the sensation of a larger bathroom.

Shower Trays

Shower trays with Dekton Grip+ and Silestone: exclusive and integrated designs in the bathroom with limitless customization possibilities.

Cosentino offers an extensive collection of shower trays in the material the architect or designer chooses and adaptable to any space. It is an interesting alternative to the traditional shower that simplifies installation and assembly.

Sinks

Sinks and worktops with great versatility that adapt to any space. Sophisticated designs with maximum beauty and durability.

Silestone sinks are built with a unique and innovative design able to live up to the most demanding creative proposals. From sinks that integrate into the worktop, to above-worktop options, double bowls...everything is possible with tailor-made fabrication.

Optimma Format

Dekton Optimma Format. Optimized for interior bathroom cladding: taking full advantage of the space, easy installation, and design continuity in a vertical format.

The Optimma slab format is 260 x 100 cm y 4 mm thick, able to meet any vertical cladding need creating a continuous design, taking advantage of the full height with easy installation and minimum waste.

Total Integration

Total aesthetic integration and visual continuity. The same material for your entire bathroom: floor, cladding, shower tray, and sink.

A single surface applied to every component of the bathroom allows for complete esthetic homogeneity, creating harmony, balance, and amplitude.

Colors and textures

New collections of innovative, on trend colors and textures, to create bathroom spaces full of originality and impact.

Innovative Silestone and Dekton surfaces possess a wide variety of solid and veined colors, unique chromatic pantones, and sensory textures to rediscover bathroom spaces.

01/ Bathroom Space

A Mediterranean style villa in Murcia with a total look by Cosentino.

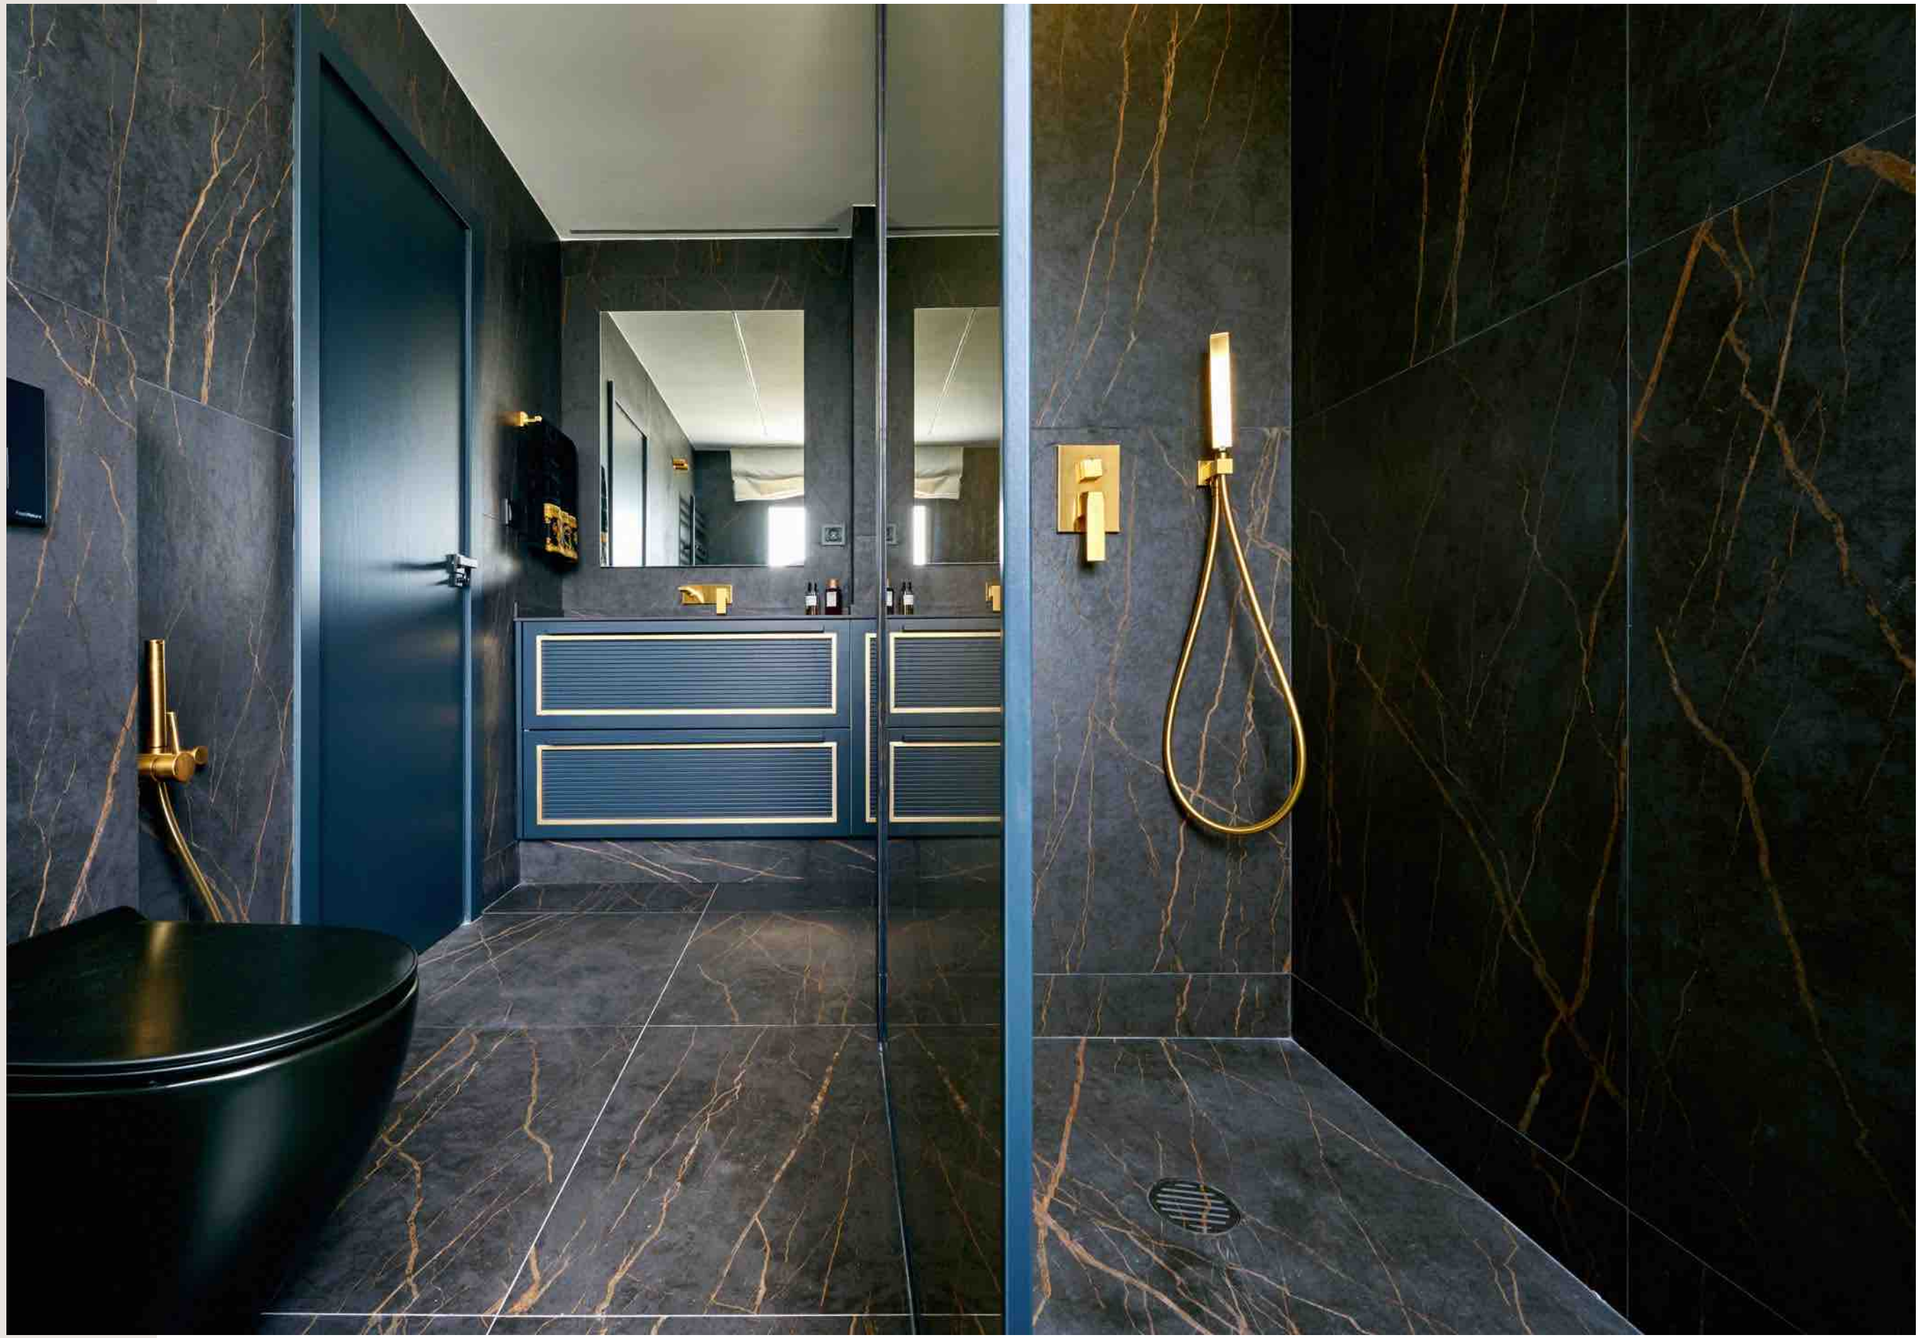

From the washbasin to the walls, the fireplace, the flooring, the shower trays... Everything in this house in Murcia features Cosentino surfaces. According to its designer, María Conesa: "The complete renovation of this Mediterranean style villa has been carried out entirely with a range of Dekton surfaces".

There were many factors that led Conesa to choose this ultra-compact surface: "It is resistant, beautiful and pleasant to the touch. It is very convenient to have these surfaces at home: they are designed to be lived in and enjoyed", she says. "We were looking for a relaxed luxury that would last for years in perfect condition and still look as beautiful as it does now. We are very pleased with the result".

Dekton's ease of cleaning was also a determining factor in its choice: "It is very easy to clean and maintain, which is no surprise: I was lucky enough to visit the headquarters, research centre and factory in Almería and realised how much technology there is behind these seemingly simple products", says the interior designer.

—

Architecture / Design
María Conesa

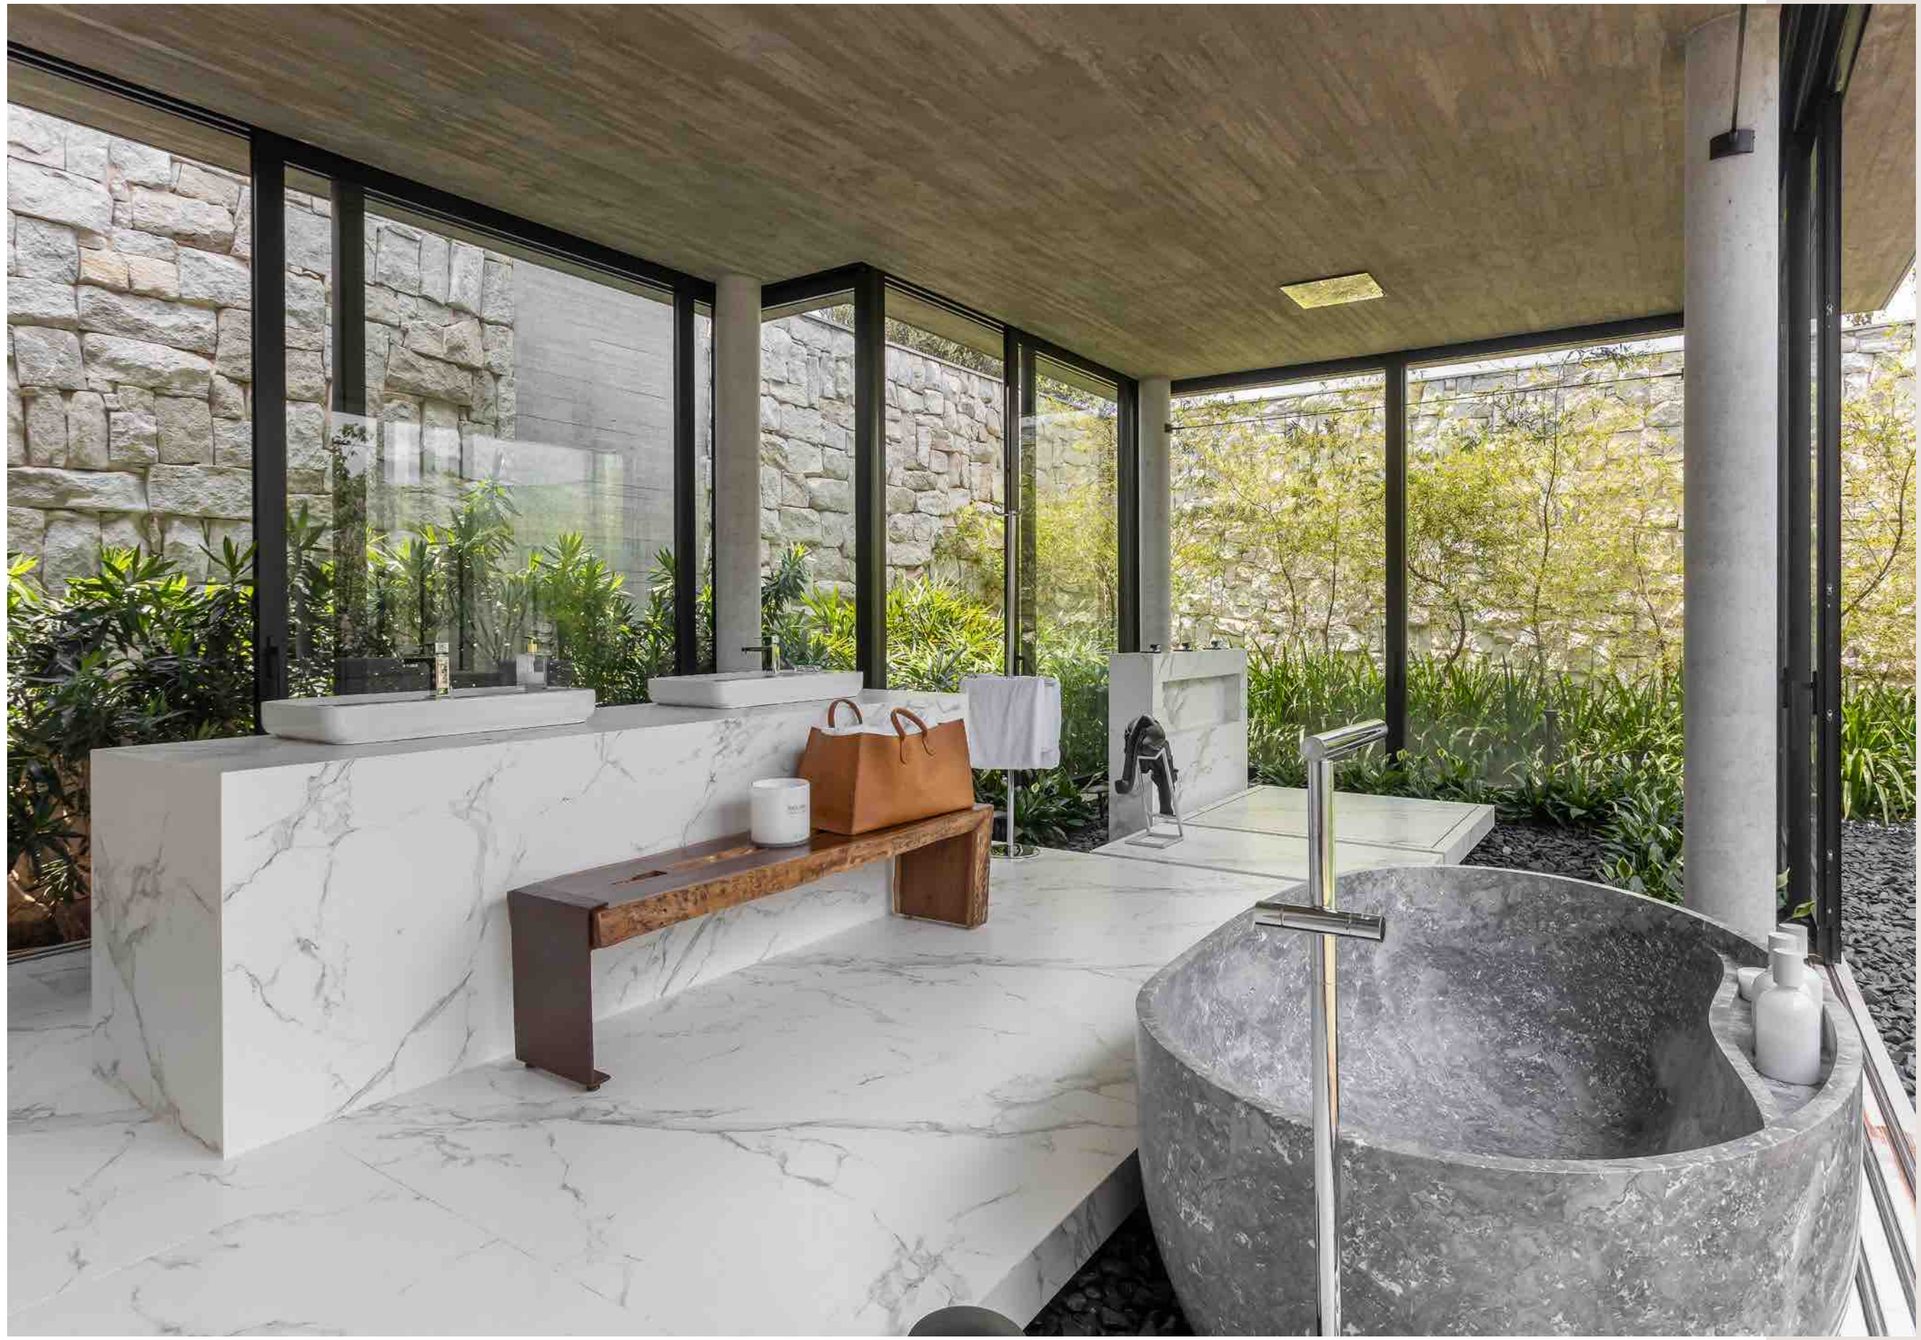

In the guest bathroom, the golden veins of Dekton Laurent dominate the space. From the whashabin to the walls, everything features Dekton ultracompact surface.

02/ Bathroom Space

A unique fusion of sophistication, modernity and funcionality in this house in Brazil.

The project has always aimed to harmonise with the outside and its surroundings, using natural materials and a minimal yet elegant design. For both studios, it was essential to create a dialogue between the inside and the outside, ensuring that the finishes in the most specific areas of the house met the requirements of durability, resistance, aesthetics and functionality. So Cosentino was the natural choice, especially Dekton and some of its finishes.

—

Architecture / Design
Gledson Marques de Castro and Magnun de Castro from Studio Castro/ Fernanda Marques

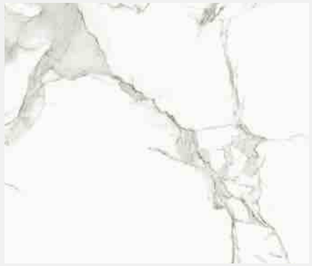

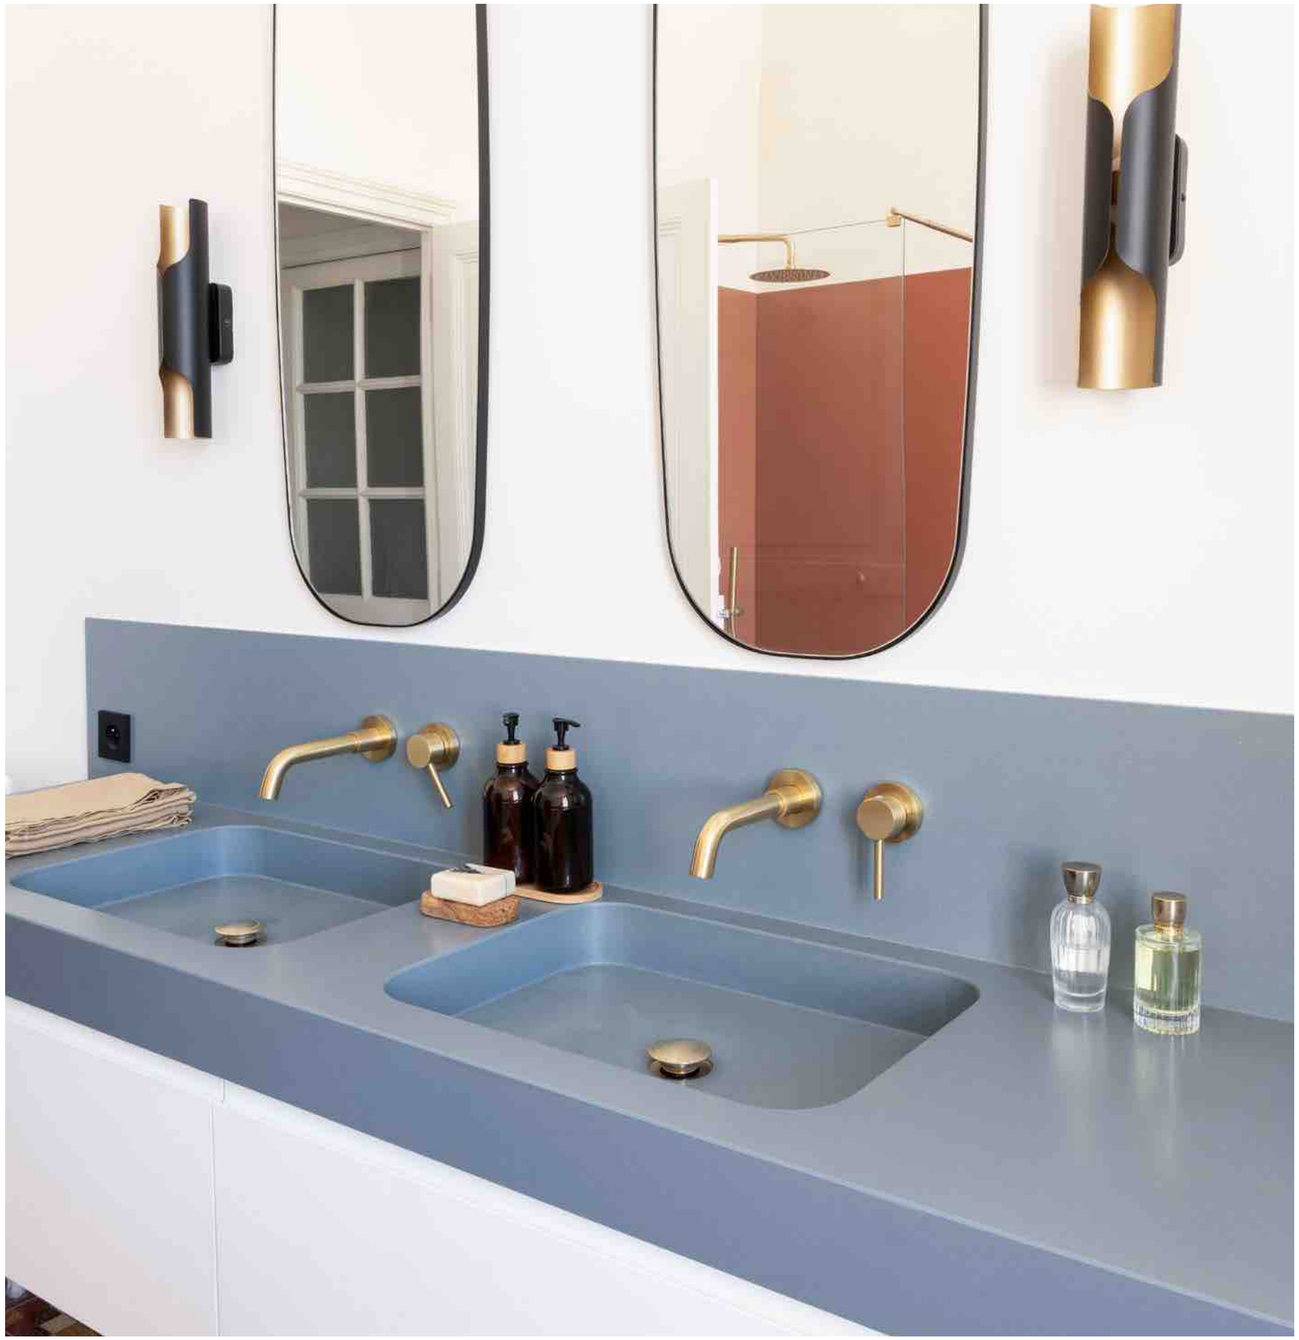

A chromatic change is made in the bathroom, pantry and sideboard of the master suite, where the architects opted for Dekton Aura. This colour pays homage to Calacatta and Carrara marble, with a white background decorated with veins that evoke the intricate lines of the natural stones.

→ Flooring, shower tray, worktop and cladding Dekton Aura

The 8 mm thick slabs have been used for both floor and wall cladding in the bathrooms, enhancing the sense of luxury and sophistication in an environment surrounded by nature.

Trendy Silestone colours adorn the bathroom of a French media architect.

—

Architecture / Design
Gaëlle Cuisy

Since 2021, Gaëlle Cuisy and Karine Martine, have both appeared on the programme 'M comme Maison' on the French channel C8. In this TV show, architects deliver bespoke projects that meet the specific needs of their clients, all within a strict budget and to very tight deadlines.

However, their most important project is, of course, their own home. In the case of Cuisy, it has recently been realised in Nîmes after a refurbishment that has not only given it functionality and elegance, but also brought it into line with contemporary design trends. In this project, Silestone by Cosentino was chosen for the bathroom.

Silestone by Cosentino was chosen for the bathroom of this project in Nîmes.

Specifically, three colours from the new Sunlit Days collection were used, trendy shades that are among the interior designers' favourites. Gaëlle Cuisy opted for Arcilla Red, a deep, earthy red that creates cosy, warm rooms, for the wall cladding, while Cala Blue was used for the countertop and double Marie washbasin. Cala Blue is a modern and stimulating blue colour which, with its interplay with light, balances between the depth and the surface of the sea.

Finally, Cuisy went for Faro White for both the shower tray (using the Kador Suite model) and the bathtub cladding, a powdery white colour that gives the room a sense of calm and serenity. All in all, the room exudes style and personality, with a decidedly contemporary touch.

Knight Varga Interiors Design a Family's Forever Home in West Vancouver.

When selecting surfaces, Silestone and Dekton were an easy choice for the designers. The materials offer versatility and are used extensively throughout the home. The open concept was designed to soak in natural light and views from every room, so the finishes needed to flow naturally and seamlessly.

Knight Varga Interiors incorporated Dekton Rem for the primary ensuite walls and benches, "we love Rem's subtle tones and textures," they shared. Silestone Et. Noir was also used in the powder room, where the designers ordered a counter with an integrated sink.

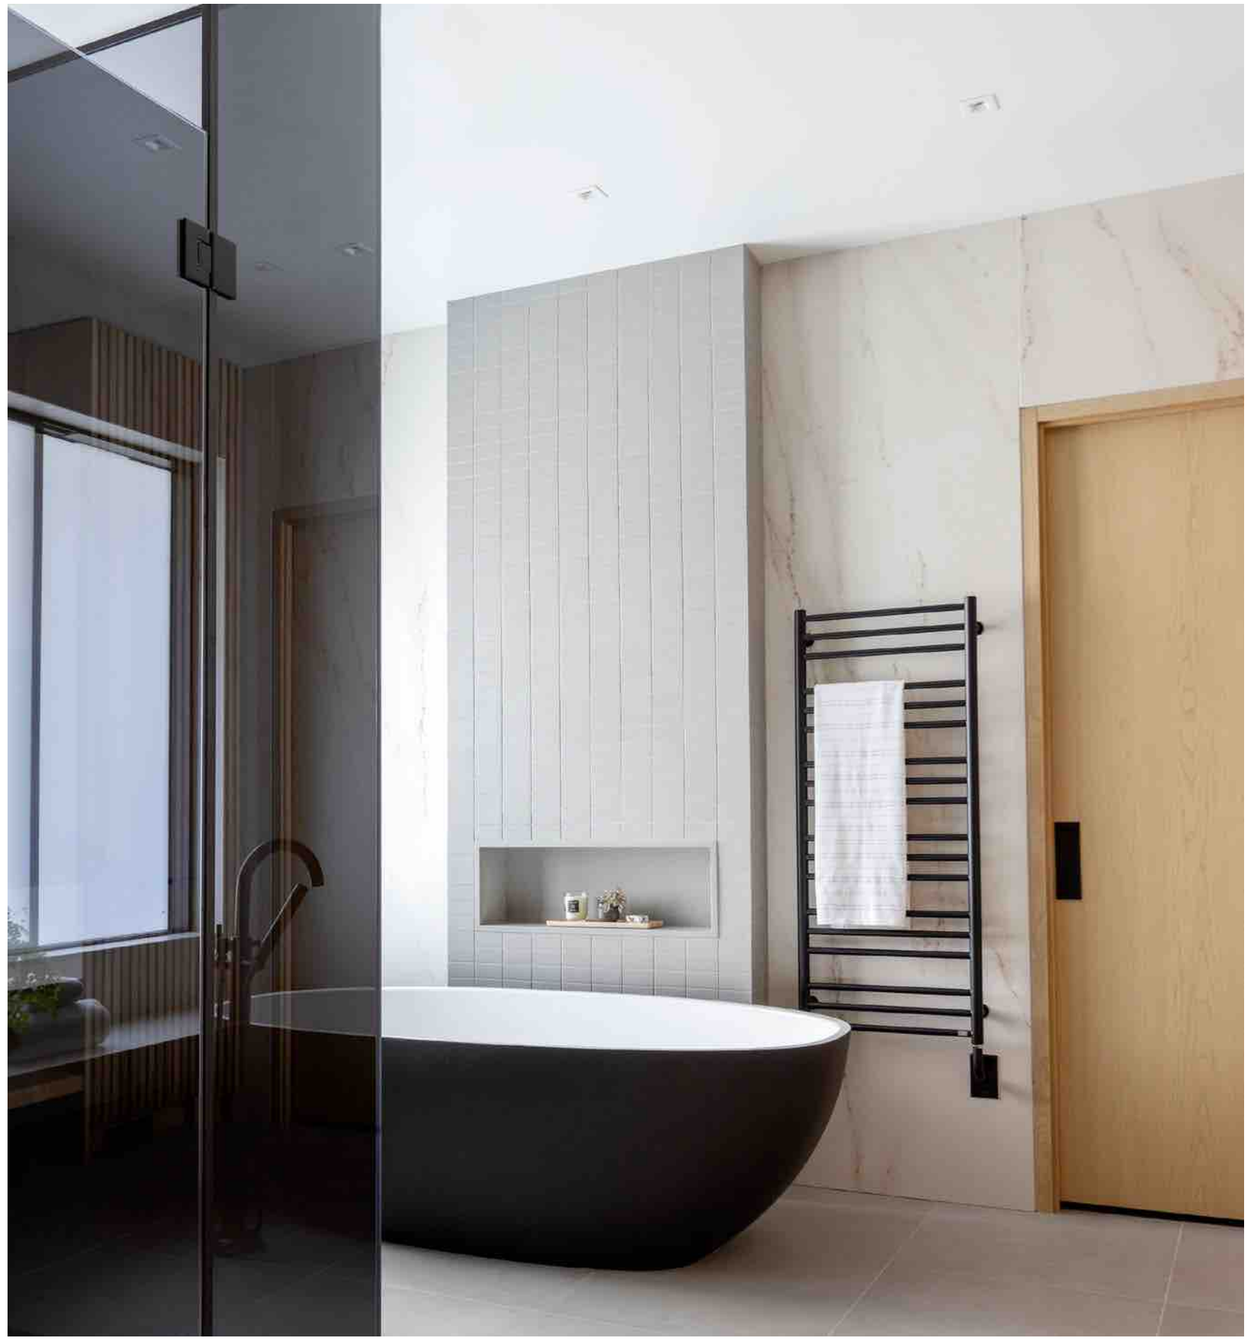

The floor of the powder room as well as the adjacent lounge and office is Dekton Kovik, a natural gray base with subtle veining.

05/ Bathroom Space

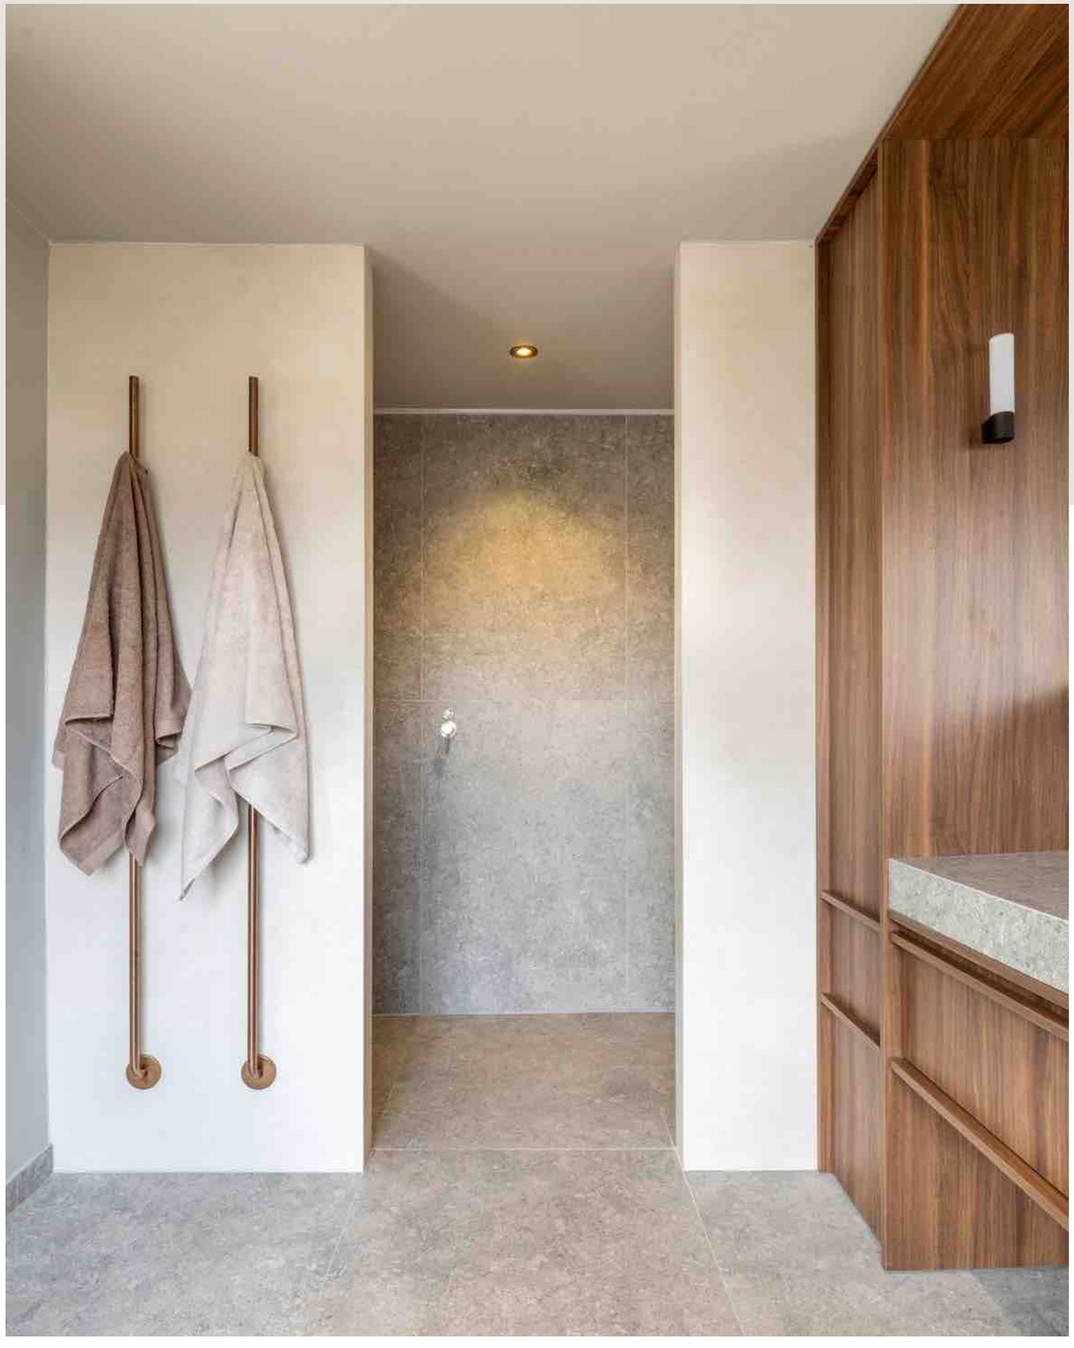

A serene space for rest & relaxation.

In her most recent project, her own home, Carolina Rusinek, owner of KENISUR, chose Cosentino's materials for both the bathroom and kitchen. The inspiration for the bathroom comes in part from the walnut wood that was already present in other rooms of the house.

—

Architecture / Design
Caroline Rusinek

→ Worktop, flooring, shower tray and cladding
Dekton VK03 Grigio

→ Cladding
Dekton TK06 Marmorio

To create a calm basis, she chose the combination of Dekton Grigio and Dekton Nacre for the floor and walls. The washbasin top and the back wall of the furniture are also made of Dekton Grigio. With its warm nuances and gray undertones, Dekton Grigio fits perfectly with the walnut wood that has also been used for the generous bathroom furniture.

In addition to the toilet installed in the bathroom, there is also a separate toilet room in which Cosentino materials have been used. Here, Dekton Marmorio was chosen for the floor and back wall, and Dekton Nacre for the side walls. Nacre has a stucco structure with a unique appearance. A beautiful combination that gives a lot of depth to the space. Together with the beige-colored sanitary ware and the playful niche with mosaic, this results in a beautiful toilet room.

06/ Bathroom Space

A spacious and practical bathroom that is dressed with elegance and minimalism.

Light tones predominate in this space, in counterpoint with some dark-colored elements, thus creating a harmonious and unique combination.

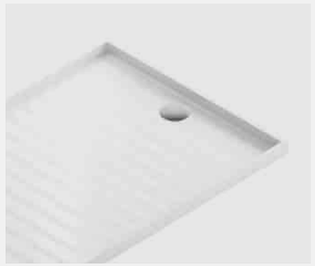

Silestone XM Eclectic Pearl, applied to walls, worktops and Simplicity washbasins, features a cream background and delicate silver veins.

This design is part of the brand's latest collection, Le Chic, which aims to revive marbled patterns, providing bright touches. The shower tray is also one of the models from the Silestone Kador Suite bathroom collection completely adapted to the rest of the space.

07/ Bathroom Space

A modern space with relaxed lines.

Inspired by the timeless beauty of Travertine marble, this bathroom reinterprets the concept of Roman baths with two diferent patterns in dialogue. Dekton TK06 Marmorio and Dekton TK05 Sabbia add elegance to the whole.

The colour chosen for the walls was Dekton TK06 Marmorio, a recoding of Travertino Navona, the stone out of which ancient Rome was built. Its distinctive parallel lines add solemnity to the whole.

As for the flooring and washbasin area, the colour chosen was Dekton TK05 Sabbia, a stylised version of Travertine characterised by a strong horizontality and veining that maximises the expressiveness of natural stone while giving it the highest performance of ultra-compact surface.

4→ Silence S washbasin
Dekton TK05 Sabbia

1

2

3

4

TK05 Sabbia was also used for the Silence washbasin, achieving total integration, while the simplicity of Silestone Exelis was chosen for the shower tray.

Thanks to the use of two totally different patterns based on the same stone, the sense of spaciousness is enhanced.

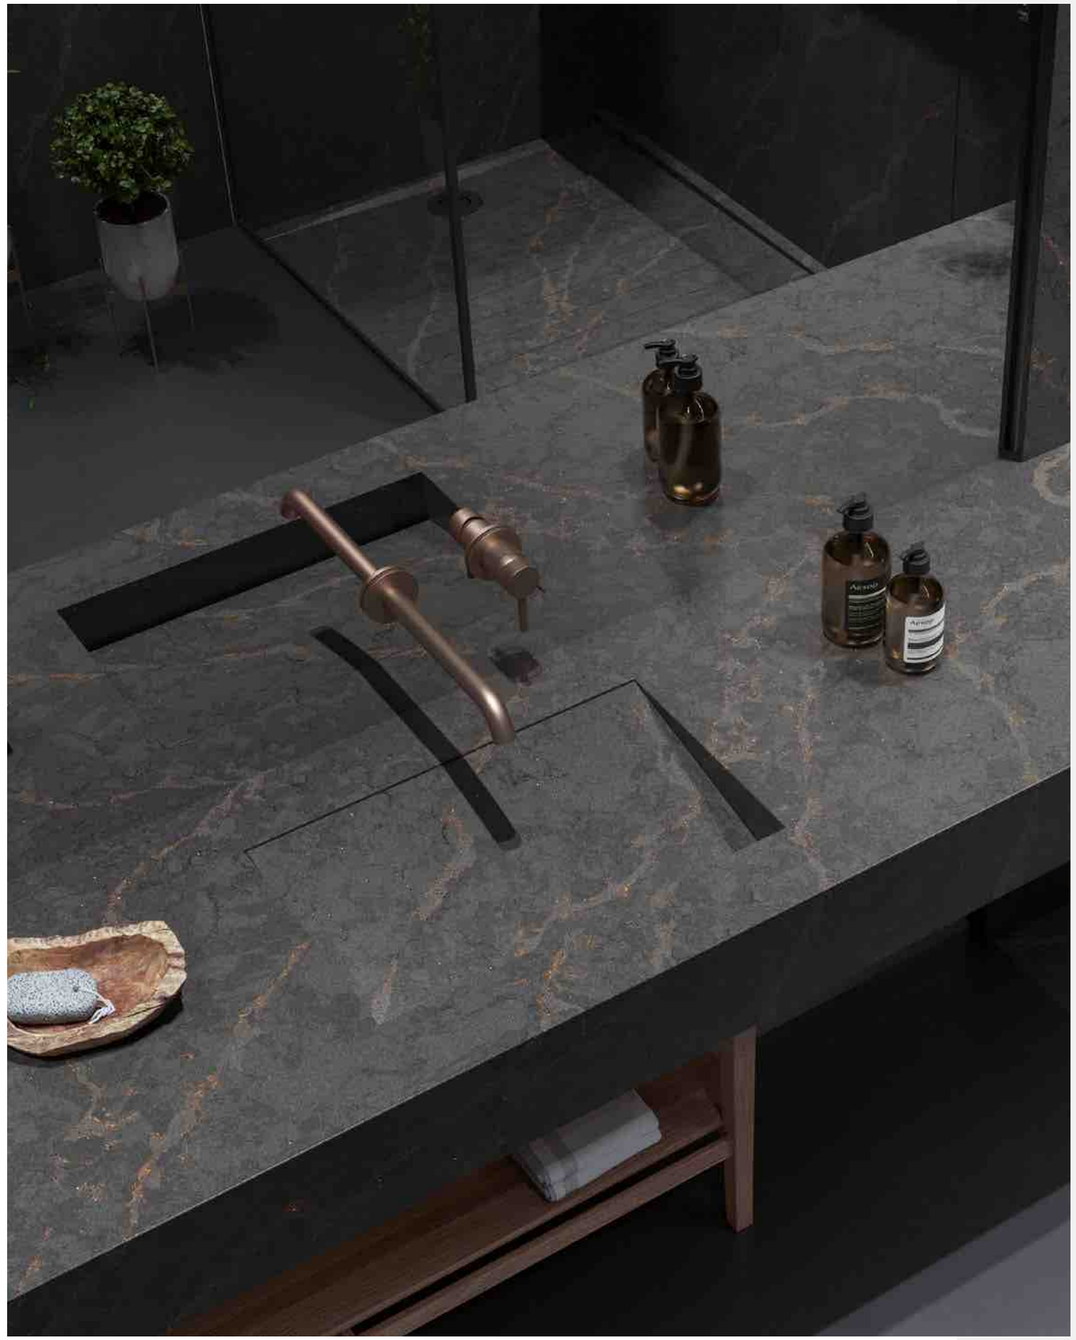

08/ Bathroom Space

Industrial style and sophisticated touches: a bathroom to enjoy functionally and aesthetically.

With dark colors in all its applications, this space has Silestone in the wall covering, worktop and sink. Bohemian Flame, one of the designs from the brand's latest collection, designed to redefine timeless classics, is chosen for the creation of this uniquely designed bathroom.

The veins that intersect the dark background are inspired by the movement of golden lava flows that create scars in the volcanic soil.

The flooring, for its part, has been covered with Sirius, one of the dark classics of the ultra-compact Dekton surface.

The shower tray installed is the Silestone Wakka Brim model and the washbasin is Silestone Armony. Both complete an environment that demonstrates the versatility and visual continuity of all Cosentino products.

09/ Bathroom Space

The updated classic style of this luxurious bathroom is expressed in every detail.

The use of light, neutral colours, contemporary touches such as black taps and a sophisticated texture inspired by natural stone create a space that exudes a quiet elegance. To maximise the light, the surfaces, furniture and Marie TOP L washbasins feature light colours.

Used on the washbasin area, floor and walls, Dekton Awake shines in its own light and elevates the tone of the entire room. Its design inspired by Paonazzo stone gives an elevated look with its thick veins in shades of light grey, terracotta cream and subtle blues. To define the wet area, such as the bathtub and shower floor – perfectly integrated thanks to the use of Dekton Rainfloor–, the colour chosen was Dekton Nacre, a more neutral tone that contributes to creating a more relaxed space.

Cosentino Exterior Space

Beautifully continuous and durable outdoor spaces.

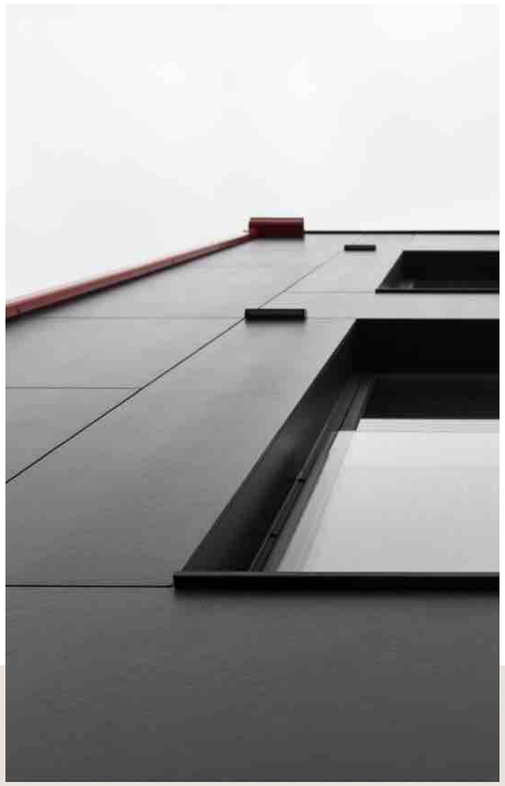

Redesign your outdoor spaces to include porches and terraces that blend in with your home.

Customization without limits

Open spaces with freedom for inspiring, designing with a unique purpose: personalizing your outdoors spaces.

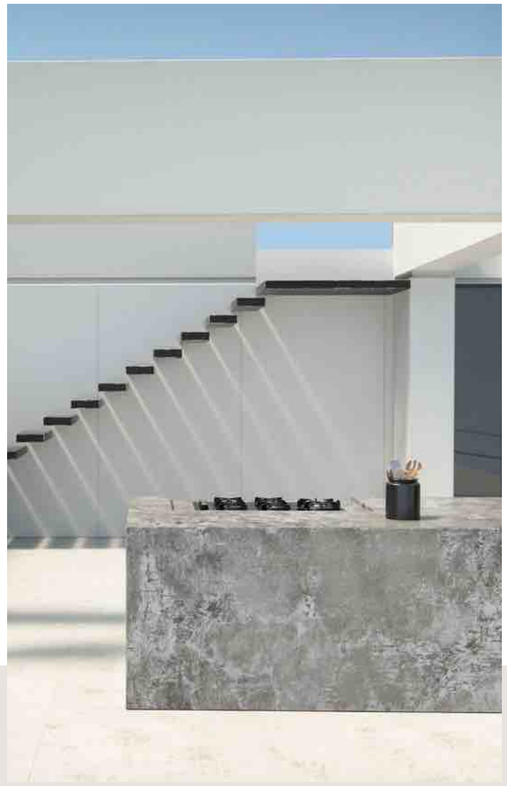

Easy installation

Dekton is very lightweight, easy-to-cut and adaptable format.

High transit resistance

It remains unalterable faced with daily erosion and abrasion in outdoors spaces, used in terraces, stairs and pool surroundings.

Dekton Outdoor Worktop

Dekton outdoor worktop is resistant and durable. Innovative surfaces turn into functional and beautiful worktops.

01/ Exterior Space

The white Dekton facade of this single-family house in Sanxenxo catches the eye.

In the heart of the rural landscape of the Galician town of Sanxenxo, characterised by the predominance of single-family houses, stands this remarkable project by Estudio JASS, led by José Antonio Sueiro Sueiro. An architectural marvel, dazzling in its white colour and finishes. Designed in different volumes and levels to respect the topography of the site, the residence features large windows to enhance the natural light and stunning views that surround the property.

The studio chose Dekton for the facade and the upper part of the walls because, according to the architect himself, it met all the project's requirements in terms of the material's technical properties, colour, texture and design.

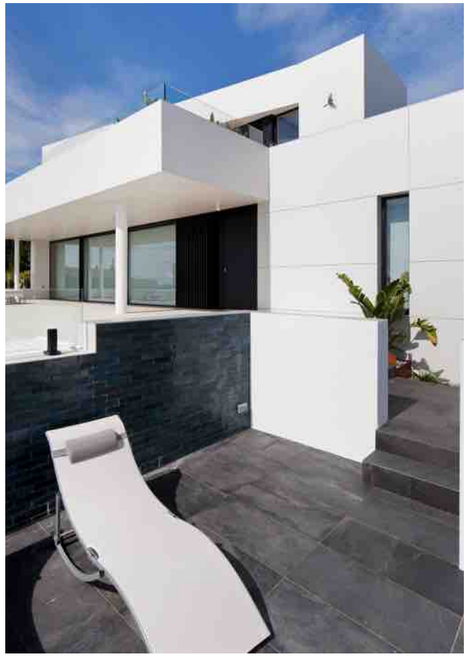

—

Architecture / Design
José Antonio Sueiro Sueiro,
Estudio JASS

→ Facade
Dekton Zenith

A Nordic white for clean rooms.

As first impressions make all the difference, the exterior of the house had to be something very special. In order to create a facade to match the scale of the work, Dekton Zenith was selected for the cladding. It is a Nordic white, perfect for fresh and spacious environments.

The clean, matt finish suits any style and blends in perfectly here. The studio chose it because it had "confidence in the quality of the material, as well as the colour and finish qualities".

02/ Exterior Space

A brutalist and industrial style house in Brazil with unique Cosentino finishes.

With an exterior dominated by straight lines and a seemingly simple style, there is nothing to suggest that this 1,150-square-metre house in Brazil has a magnificent interior, halfway between industrial and minimalist, but combining warmth and elegance in a sumptuous way. The project was brought to life by architects Gledson Marques de Castro and Magnun de Castro from Studio Castro, with interior designer Fernanda Marques leading the interior design. The result is a unique fusion of sophistication, modernity and functionality, with Cosentino playing a key role in the finishes.

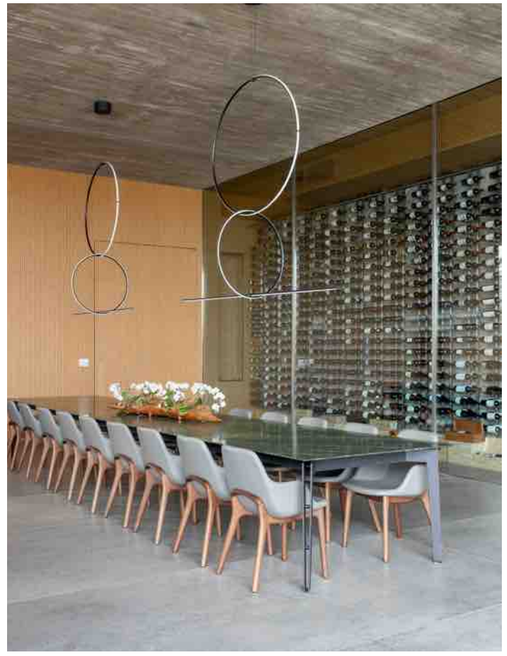

—

Architecture / Design
Gledson Marques de Castro and Magnun de Castro from Studio Castro/ Fernanda Marques

→ Kitchen island, flooring, cladding and furniture cladding Dekton Kreta

The design is uniform and controlled, featuring darker or lighter areas depending on the density of the pattern. In addition, its matt texture and grey shade match all types of materials, making it suitable for any application. The fact that this is an outdoor area meant that it had to have the performance that only Dekton can offer in terms of resistance and ease of maintenance.

03/ Exterior Space

A Mediterranean style home with a total look by Cosentino.

From the washbasin to the walls, the fireplace, the flooring, the shower trays... Everything in this house in Murcia features Cosentino surfaces. According to its designer, María Conesa: "The complete renovation of this Mediterranean style villa has been carried out entirely with a range of Dekton surfaces".

In this sense, the elegant Dekton Rem, a surface inspired by Calacatta white marble, dominates the barbecue area, the living room and the kitchen.

There were many factors that led Conesa to choose this ultra-compact surface: "It is resistant, beautiful and pleasant to the touch. It is very convenient to have these surfaces at home: they are designed to be lived in and enjoyed", she says. "We were looking for a relaxed luxury that would last for years in perfect condition and still look as beautiful as it does now. We are very pleased with the result".

—

Architecture / Design
María Conesa

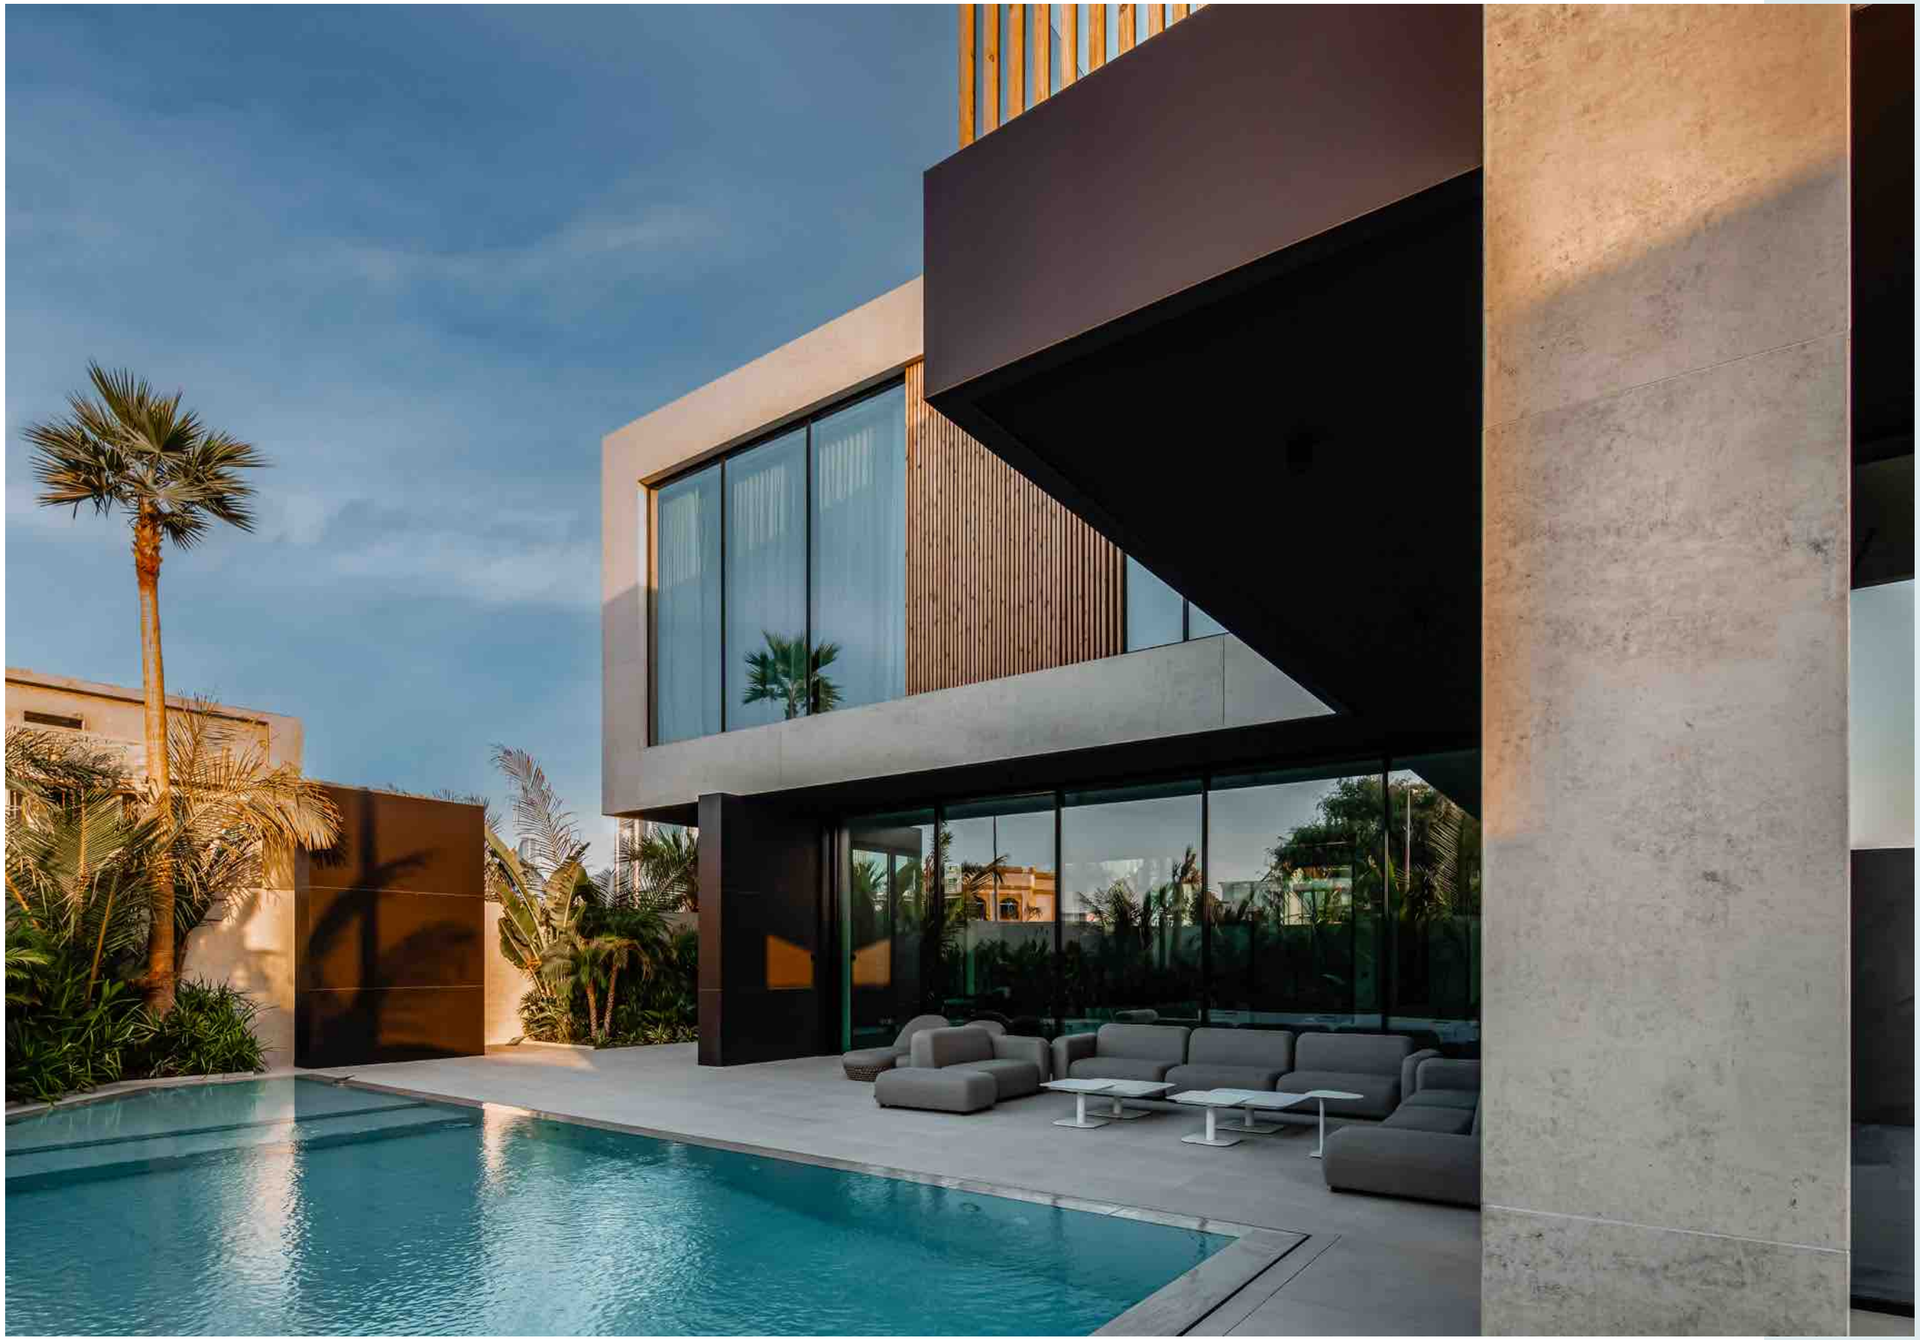

→ Kitchen island and worktop
Dekton Rem

Dekton, a “resistant, beautiful and pleasant to the touch” surface.

In fact, according to Conesa, even things that seemed more complicated, such as the use of large-format slabs for the fireplace, the kitchen island and the barbecue island, were easily solved.

“I like working with the best, and in Spain we have the best. Cosentino is a benchmark here and around the world. At no point did I compare its products with other materials: I already knew them from other projects and I bet on the winning horse”, the professional says finally.

04/ Exterior Space

Nordic elegance at the heart of Dubai.

To talk about luxury is to talk about Dubai. And to talk about an unstoppable style is to talk about Nordic style. The result of combining these two factors is Nordic Luxe, a villa in the prestigious Al Wasl residential neighbourhood that stands as a monument to ultra-sophisticated luxury and has been designed and built by the Fam Group. This project is a masterful example of how Dekton by Cosentino meets the most demanding requirements and offers innovative technical solutions ahead of its time.

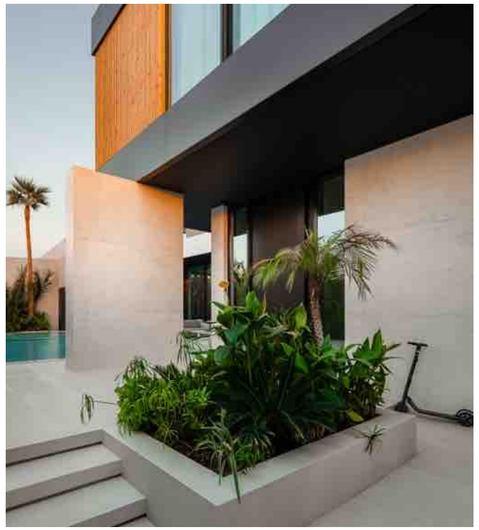

"We chose Dekton for the villa because of its large format slabs, which give the facade a seamless appearance. Its durability, UV stability, heat resistance and wide range of colours are some of the other advantages that made it the perfect choice for the project," says Fam Group. These words highlight the unique properties of this material, including its ability to withstand extreme weather changes, a crucial requirement in Dubai's desert environment.

—

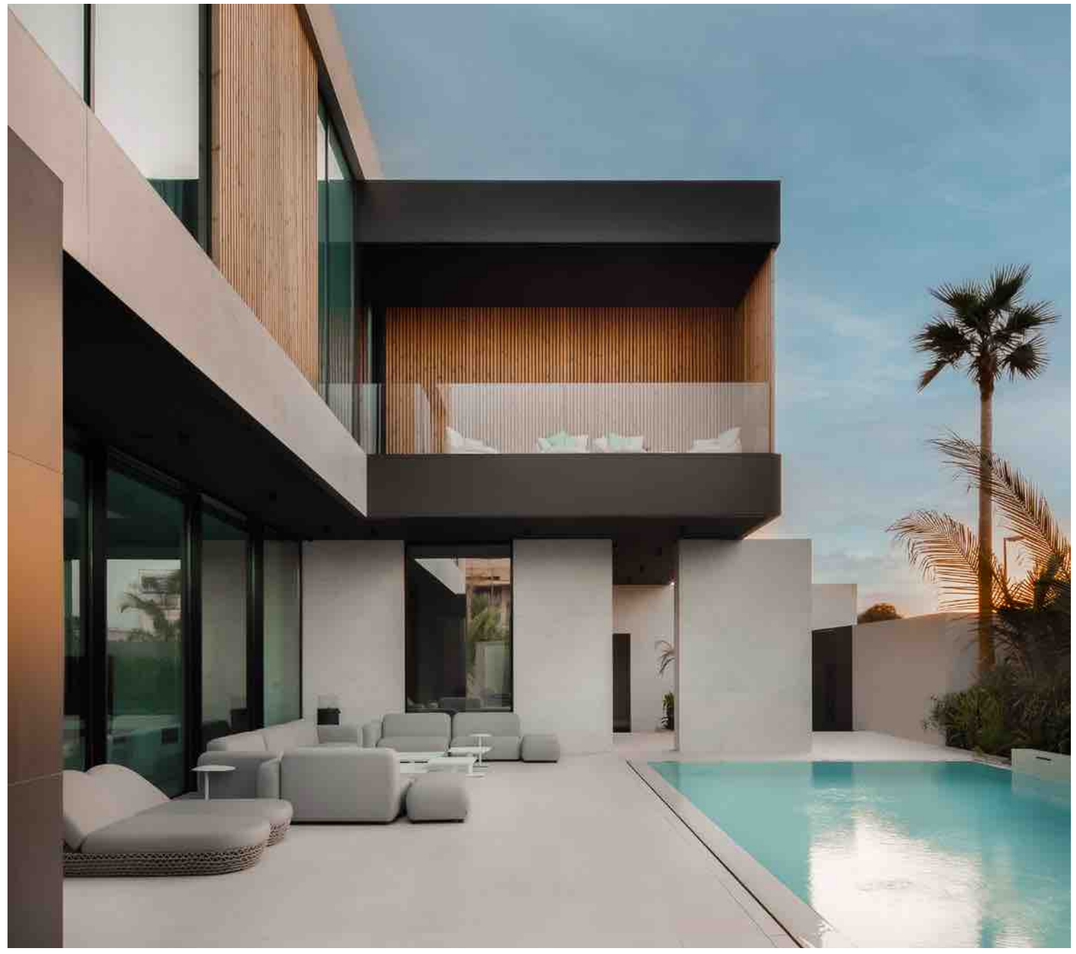

Architecture / Design
Fam Interiors

→ Flooring, cladding and facade
Dekton Lunar

→ Facade
Dekton Domoos

The use of Dekton on the facade of the villa is a statement of intent. One of the colours chosen was Dekton Lunar, an ultra-compact surface that mimics the texture and colour of the moon, providing a smooth and uniform aesthetic that blends perfectly with the overall design of the villa. Its combination with the graphite black of Dekton Domoos and the use of wood accents creates a facade with an elegant and refined design.

05/ Exterior Space

A facade with suspended volumes that takes advantage of the lightness of Dekton.

Located in the rich historical region of Morelia, in the state of Michoacán (Mexico), this house defies the laws of gravity by playing with the optical and, above all, the geometric. Its contemporary design, by Enrique Romero from ZET Arquitectos, stands out in its surroundings while establishing a balanced dialogue with the landscape. 'Integration with the surroundings and the topography provides the basis for generating the forms and spaces,' explains the architect. 'The result is a geometry based on vertices that produce seemingly suspended volumes,' he continues.

The facade of the house has a very strong aesthetic appeal, to which Dekton contributes as the main material. Inside, the design team selected other Dekton colours to give character to the rooms, which retain a taste for geometric shapes as seen on the outside.

—

Architecture / Design
Enrique Romero/ZET Arquitectos

→ Facade and flooring
Dekton Kreta

A sturdy and eye-catching facade.

'We chose Dekton because it is lightweight and easy to adapt to the shapes generated in the project,' says the architect. The versatility of Dekton makes it possible to combine two facade systems: a ventilated facade, featuring 4 mm Dekton panels glued on profiles with a certified adhesive system using cleaner, adhesion promoter, double-sided tape and adhesive line; and a glued facade, featuring 8 mm Dekton panels on a continuous substrate with cement-based adhesive. In both cases, the fixing is concealed and allows the facade planes to be continuous, interrupted only by the joint between panels of up to a maximum of 3.20 x 1.44 m. This type of fixing is common in residential projects where the facade starts from the ground floor and is highly visible at close range.

06/ Exterior Space

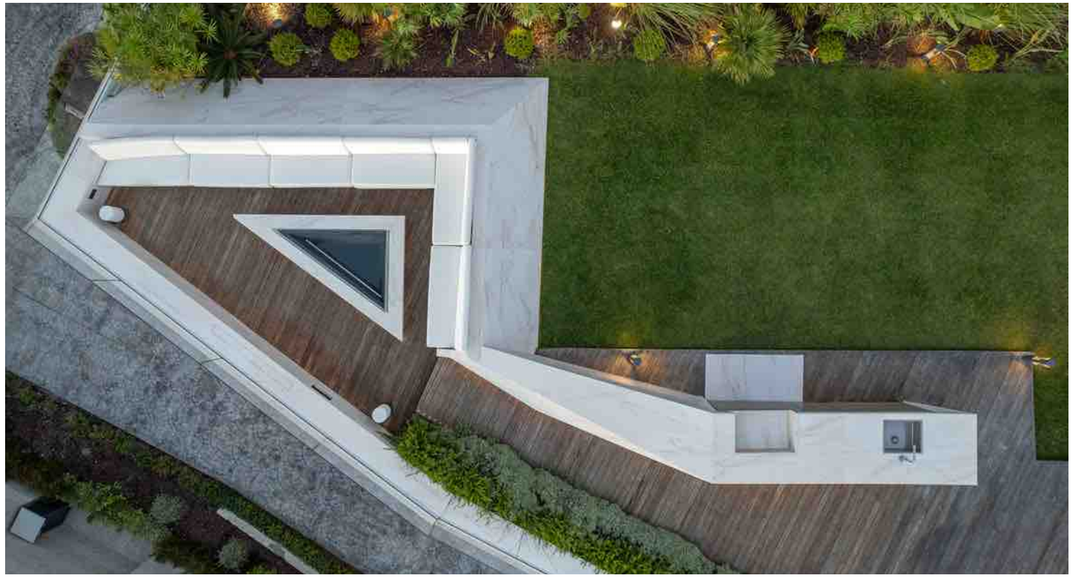

An exceptional modern haven facing the Aegean Sea that uses Dekton to blur the boundaries between inside and outside.

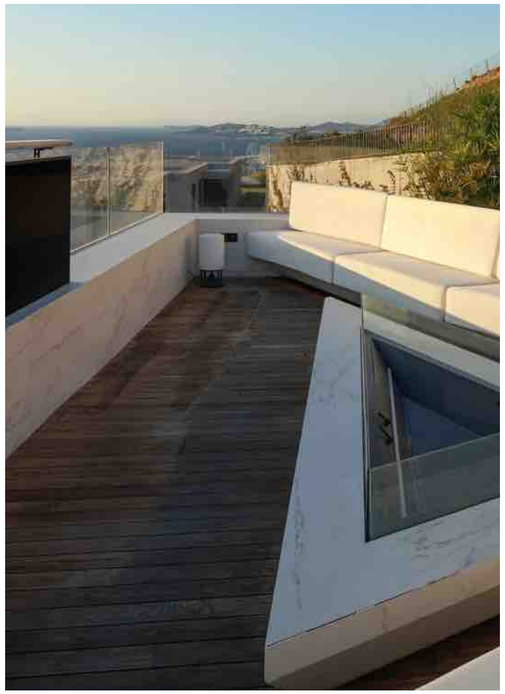

There are houses with a design that takes your breath away. Perched high on a hill overlooking the sea, this is clearly one of them. Its open plan design, fully oriented towards the sea, its common areas and even its master bedroom stand out for their ability to blend indoors and outdoors through the use of glass and similar materials in these spaces of neutral and warm shades.

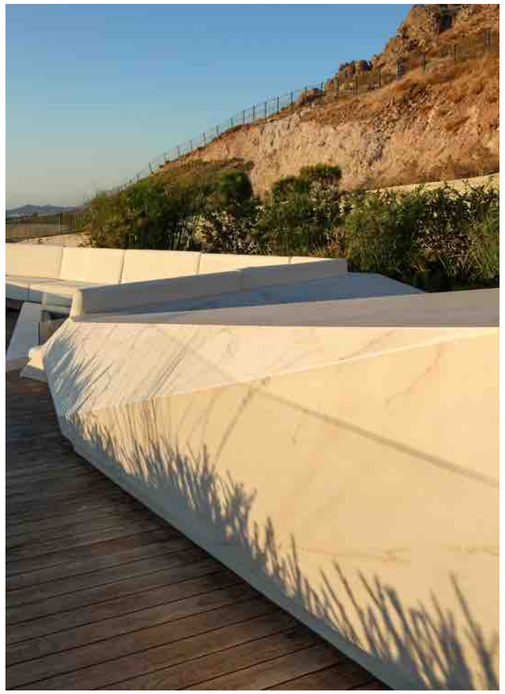

However, what is more striking about the architecture of this modern villa is, without a doubt, its vast swimming pool, which borders the entire front perimeter of the house. In addition, to enhance the feeling of indoor-outdoor integration, water is 'brought' inside, making it accessible from the living room through a large glass door.

—

Architecture / Design
Dermice Norms

→ Kitchen Island, cladding and table Dekton Rem

Dekton, the material chosen for its perfect resistance to moisture, sea salt and UV rays.

"To achieve the desired effect, we needed a large, long lasting, useful and natural material. We also appreciated its ability to remain as good as new for many years, despite the wear and tear caused by UV rays and sea salt. The fact that Dekton is a durable material, which does not stain, was a key aspect of our decision", the studio explains.

And they go on to say: "Thanks to Dekton Rem we achieved our dream architectural effect: the possibility of using it both indoors and outdoors allowed us to achieve the integrated design that we wanted. The result satisfied both us and the customer."

07/ Living Space

Facades and flooring enhance the design of this semi-detached Mediterranean villa with two dwellings.

'A house for living in the landscape, a large living space, a house that is a territory, an organism to be inhabited' is how the architects from the studio of José Jiliberto describe this villa in the Torrox Park area of Málaga (Spain). Its sinuous curves cut across the horizon, blending in perfectly with the Mediterranean landscape and paying homage to the light of the Costa del Sol. The architectural design is also fully adapted to the unevenness of the site, with the main house and an annex forming a single unit. The focal point is a large horizontal hall that articulates the spaces and adapts to the topography.

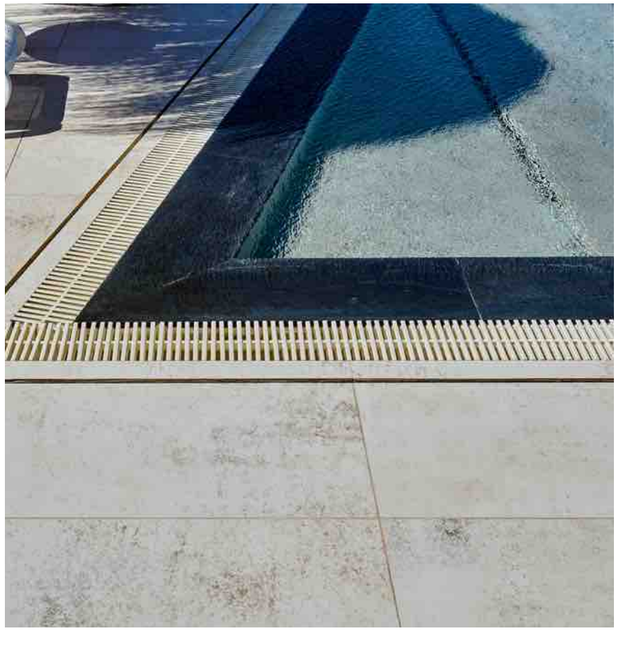

—

Architecture / Design
José Luis Jiliberto Herrera

The colour of choice for the facade, which was installed using an adhesive system, was Dekton Aeris. This is a light shade with cream details inspired by white limestone, which blends in perfectly with the landscape and its surroundings.

→ Flooring
Dekton Nilium

→ Perimeter of the pool
Dekton Laos

A solid and aesthetically pleasing floor in Dekton.

Dekton Nilium was also used to create a relaxed atmosphere with character. In combination with this colour, the perimeter of the pool was framed with Dekton Laos, a dark shade with a worn structure that enhances the industrial and modern look. Its soft matt finish and warm grey veining is the perfect complement to highlight the element of water in this outdoor area of the villa.

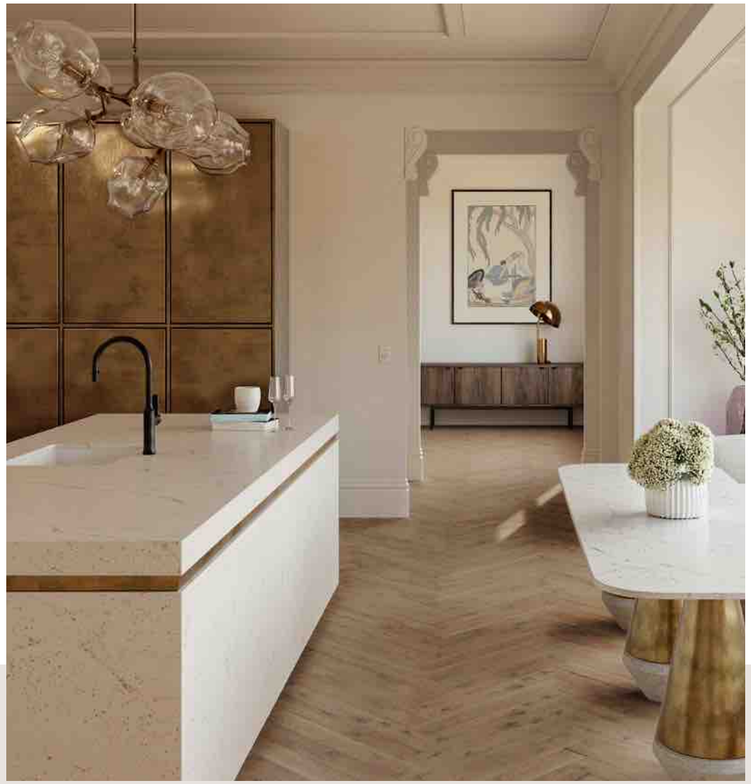

→ Facade
Dekton Aeris

Cosentino Kitchens

Reinventing the kitchen to make it the heart of the home.

It’s been a long time since the kitchen was a forgotten room in the darkest part of the house. The kitchen is now a key space that can integrate with the living-dining room and share the same design.

Integration within the space

The kitchen as a living space connected to the rest of the house. Total integration of the worktop with the living room cladding or floor.

Kitchen worktop and island

Thousands of households all over the world have trusted Cosentino to provide them with a kitchen that is not only functional and beautiful, but also plays a key role in the daily lives of their families. We offer a wide range of colours and textures, so you’re sure to find your perfect worktop.

Kitchen flooring and cladding

In this so-called “reconversion” process, the island plays a major role, as it serves as a connecting element between the two environments as well as a meeting place in the home. In this project, the interior designer built the entire design around the island.

Kitchen Sinks

The sink is a crucial feature within the room: it must guarantee resilience, safety, and hygiene. At Cosentino we use a low-porosity material which can withstand impact, high temperatures, and frequent exposure to water and grease.

Find your style: colours that combine with everything

For choosing the textures and colours that could fix better with your kitchen, it is key that you know the designs available. Maximise it with the unlimited variety of materials, formats and colours that Cosentino offers you.

01/ Kitchen Space

Dekton for the curved lines of this bold Madrid flat.

A “bold, demanding and creative” design. These are the words used by architect Héctor Ruiz Velázquez to describe the project that has transformed a compartmentalised flat on Ortega y Gasset street, in Madrid’s Salamanca neighbourhood, into an ode to curves, Scandinavian style and organic, sinuous forms. “The owner, a businessman who loves living in the city centre, was looking for a home that was designed without boundaries and where the different spaces were all connected,” explains the architect.

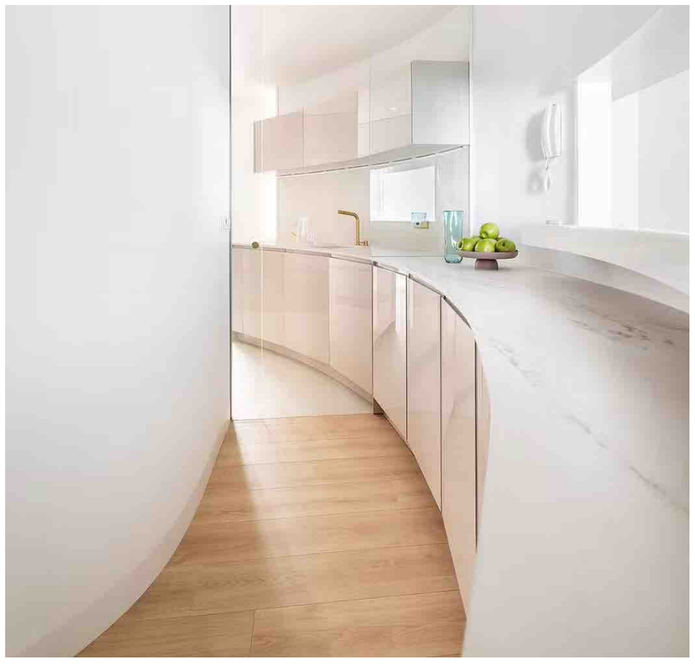

The interior architecture of the project was a great challenge that demanded both creativity and quality materials to match the project. It also had “to offer functionality and practicality to its inhabitants, while at the same time moving visitors in terms of aesthetics.” And in the end, it was the curves and versatility of Dekton that won the day.

—

Architecture / Design
Héctor Ruiz Velázquez

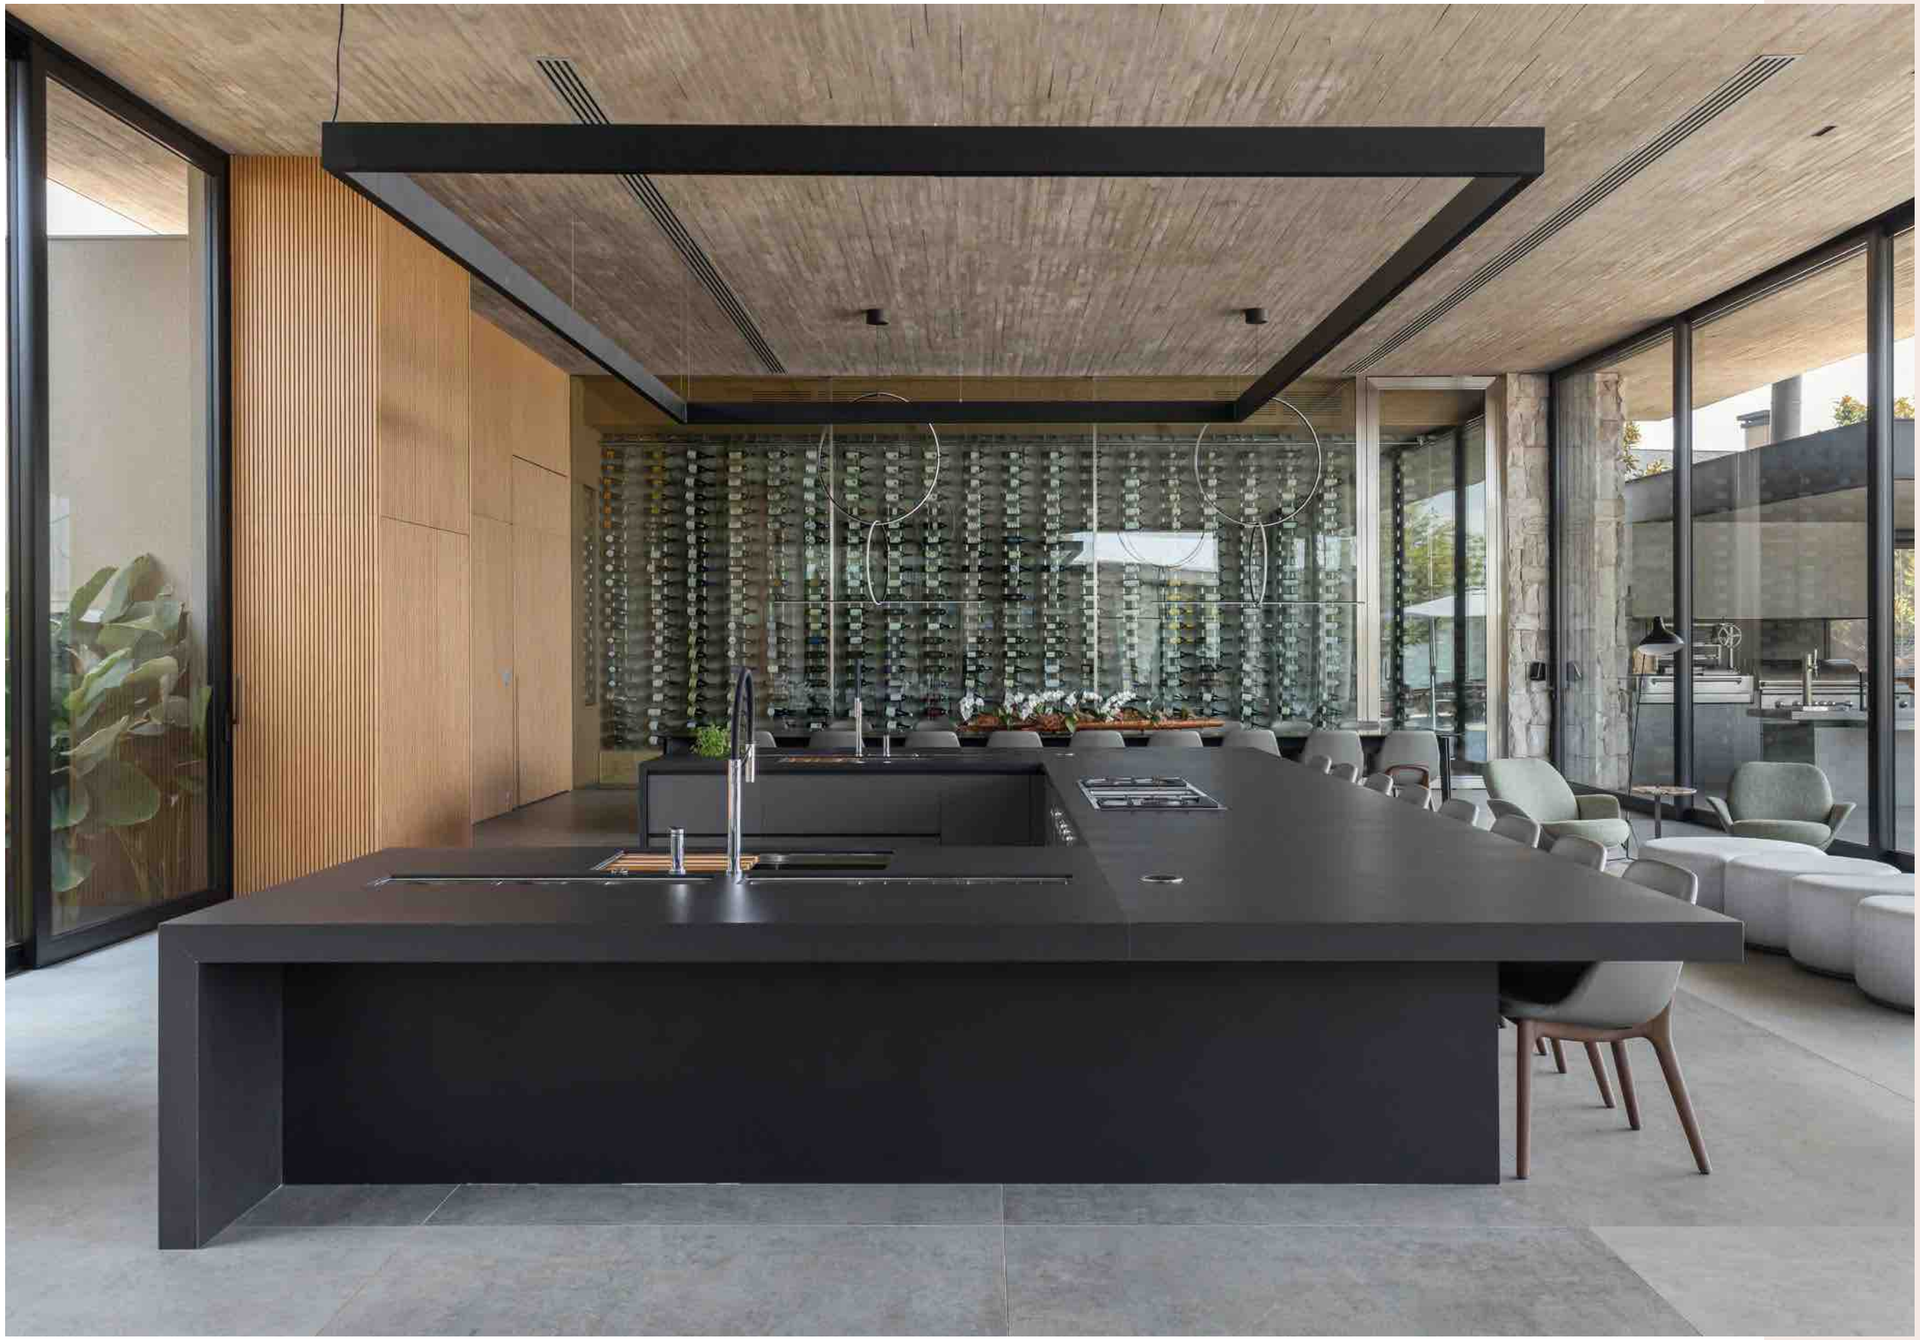

A kitchen with a circular design.

Dekton Rem was the material of choice for the second worktop – this one with a straight design – and the small bar top that connects the kitchen to the living room. The result is a very unique space full of contrasting geometries.

→ Worktop and cladding
Dekton Rem

02/ Kitchen Space

Luxury and sophistication meet the beauty of stone.

This project in Brazil has always aimed to harmonise with the outside and its surroundings, using natural materials and a minimal yet elegant design. For both studios, it was essential to create a dialogue between the inside and the outside, ensuring that the finishes in the most specific areas of the house met the requirements of durability, resistance, aesthetics and functionality. So Cosentino was the natural choice, especially Dekton and some of its finishes.

—

Architecture / Design
Gledson Marques de Castro and
Magnun de Castro from Studio Castro/
Fernanda Marques

→ Kitchen island
Dekton Domoos

In the kitchen and dining area, Dekton Domoos adorns the worktops, seamlessly integrating the cooking area, island and dining table into one continuous line. Its graphite black colour exudes an elegant and refined aesthetic, making Dekton Domoos ideal for those who appreciate understated elegance.

A brutalist and industrial style.

The worktop in the gourmet area, for example, is clad in Dekton Kreta, inspired by classic, moderately trafficked concrete floors.

→ Flooring
Dekton Kreta

03/ Kitchen Space

Dekton brightens up the second life of a century-old house in Denmark.

—

Architecture / Design
RJ Arkitektur

Scandinavian style.

To achieve such warm, enveloping textures, RJ Arkitektur relied on the luminosity provided by Dekton Aura 15. Its white background crossed by dark marbled veins convinced the team of architects to use it, as for them "Dekton is a modern, beautiful alternative to marble. If you didn't know it was Dekton, you'd think it was a natural stone.

→ Kitchen island, worktop and fireplace
Dekton Aura 15

04/ Kitchen Space

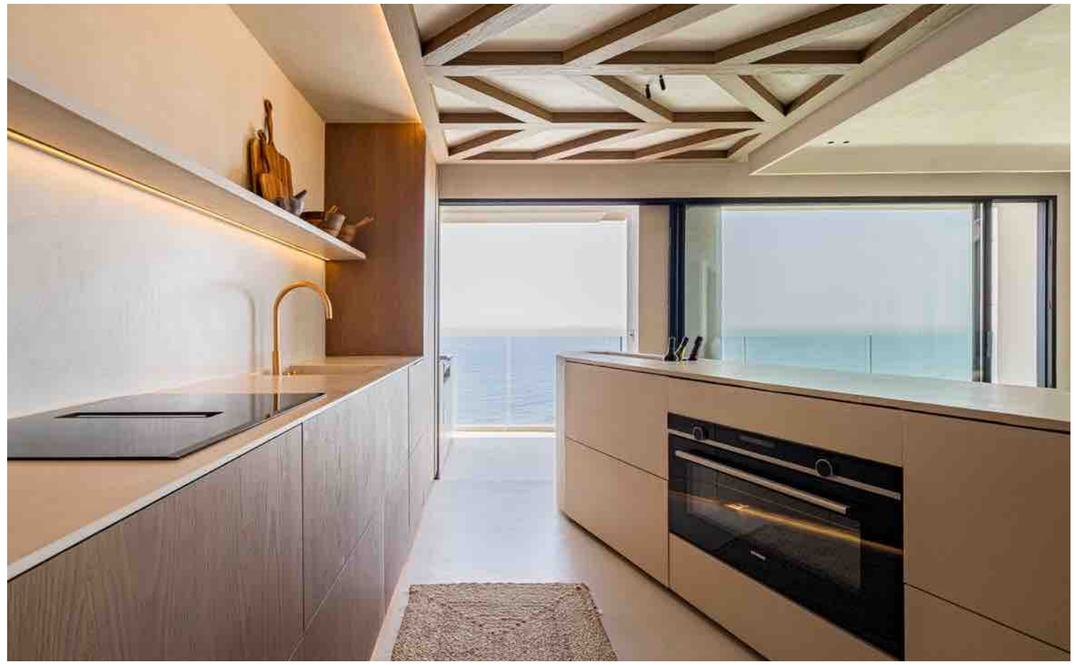

Mediterranean style, natural materials and Dekton and Sensa to elevate the design.

Taking its excellent location as a starting point, architect and interior designer Javier Tomás decided to enhance the sea views that this flat with three bedrooms, two bathrooms and kitchen-living room has to offer.

The project focuses on the day area, where the living room, dining room and kitchen take on great importance. In fact, the kitchen is elevated, which further enhances the perception of the exterior. The kitchen island, the wet areas of the bathrooms and the outdoor barbecue are clad in microcement to ensure the balance and harmony that characterise the project. The work area in the kitchen is made of Dekton Albarium, which was also used to create the double height sink integrated into the worktop.

—

Architecture / Design
Javier Tomás

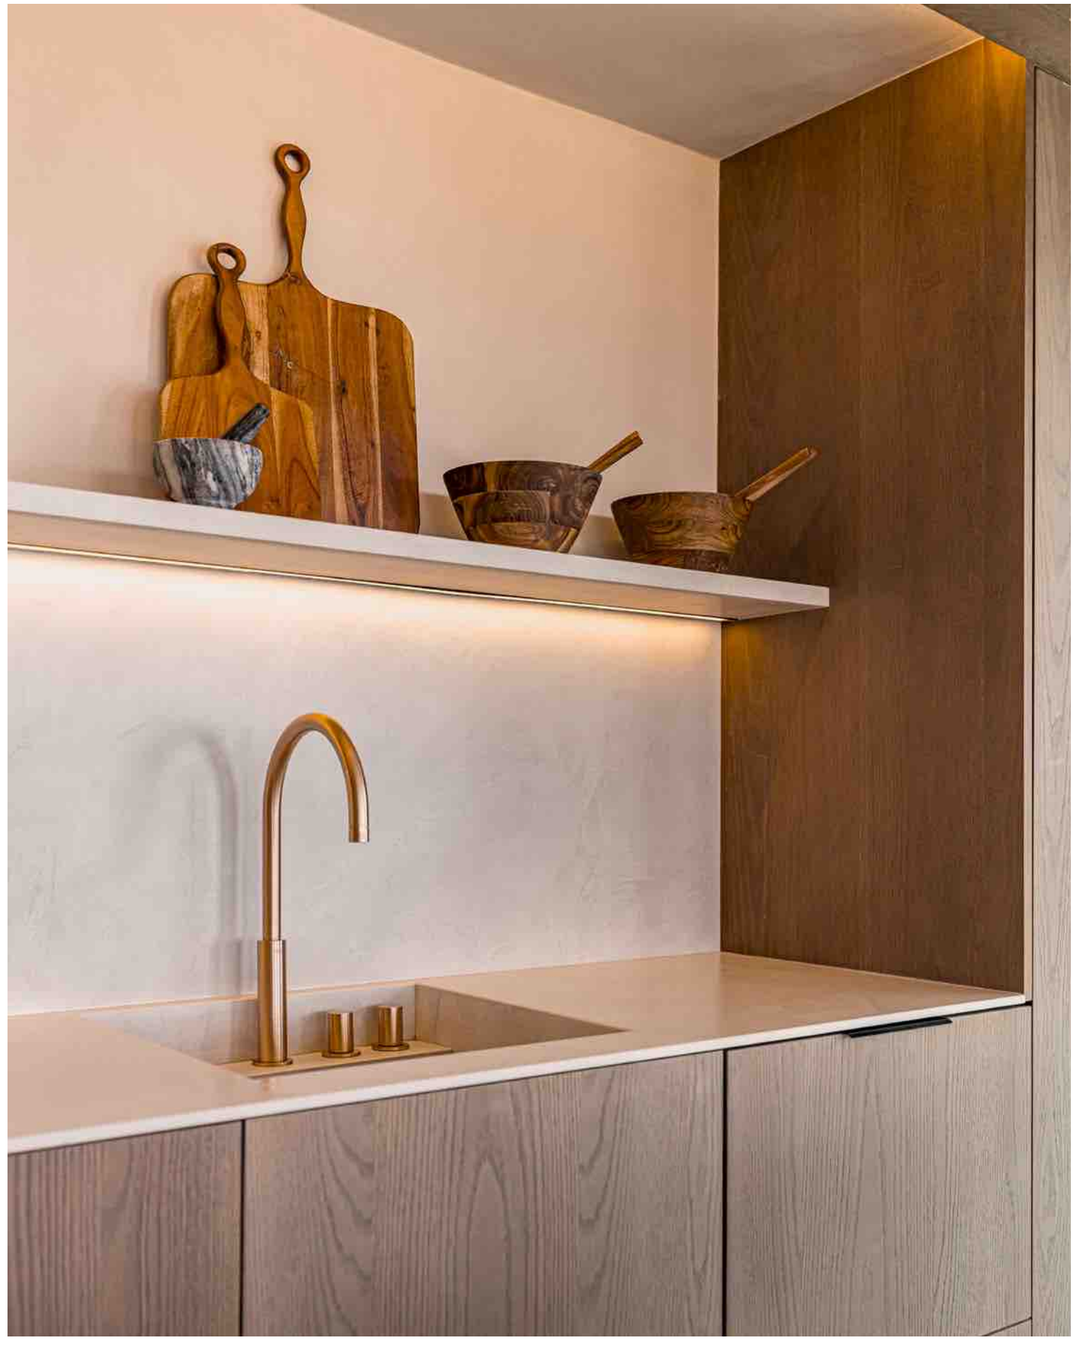

Mediterranean style and noble materials.

Dekton Albarium was the material of choice for both the kitchen worktop and the sink. The latter features a double-height design, with the built-in tap located at the upper part.

→ Worktop, cladding and sink
Dekton Albarium

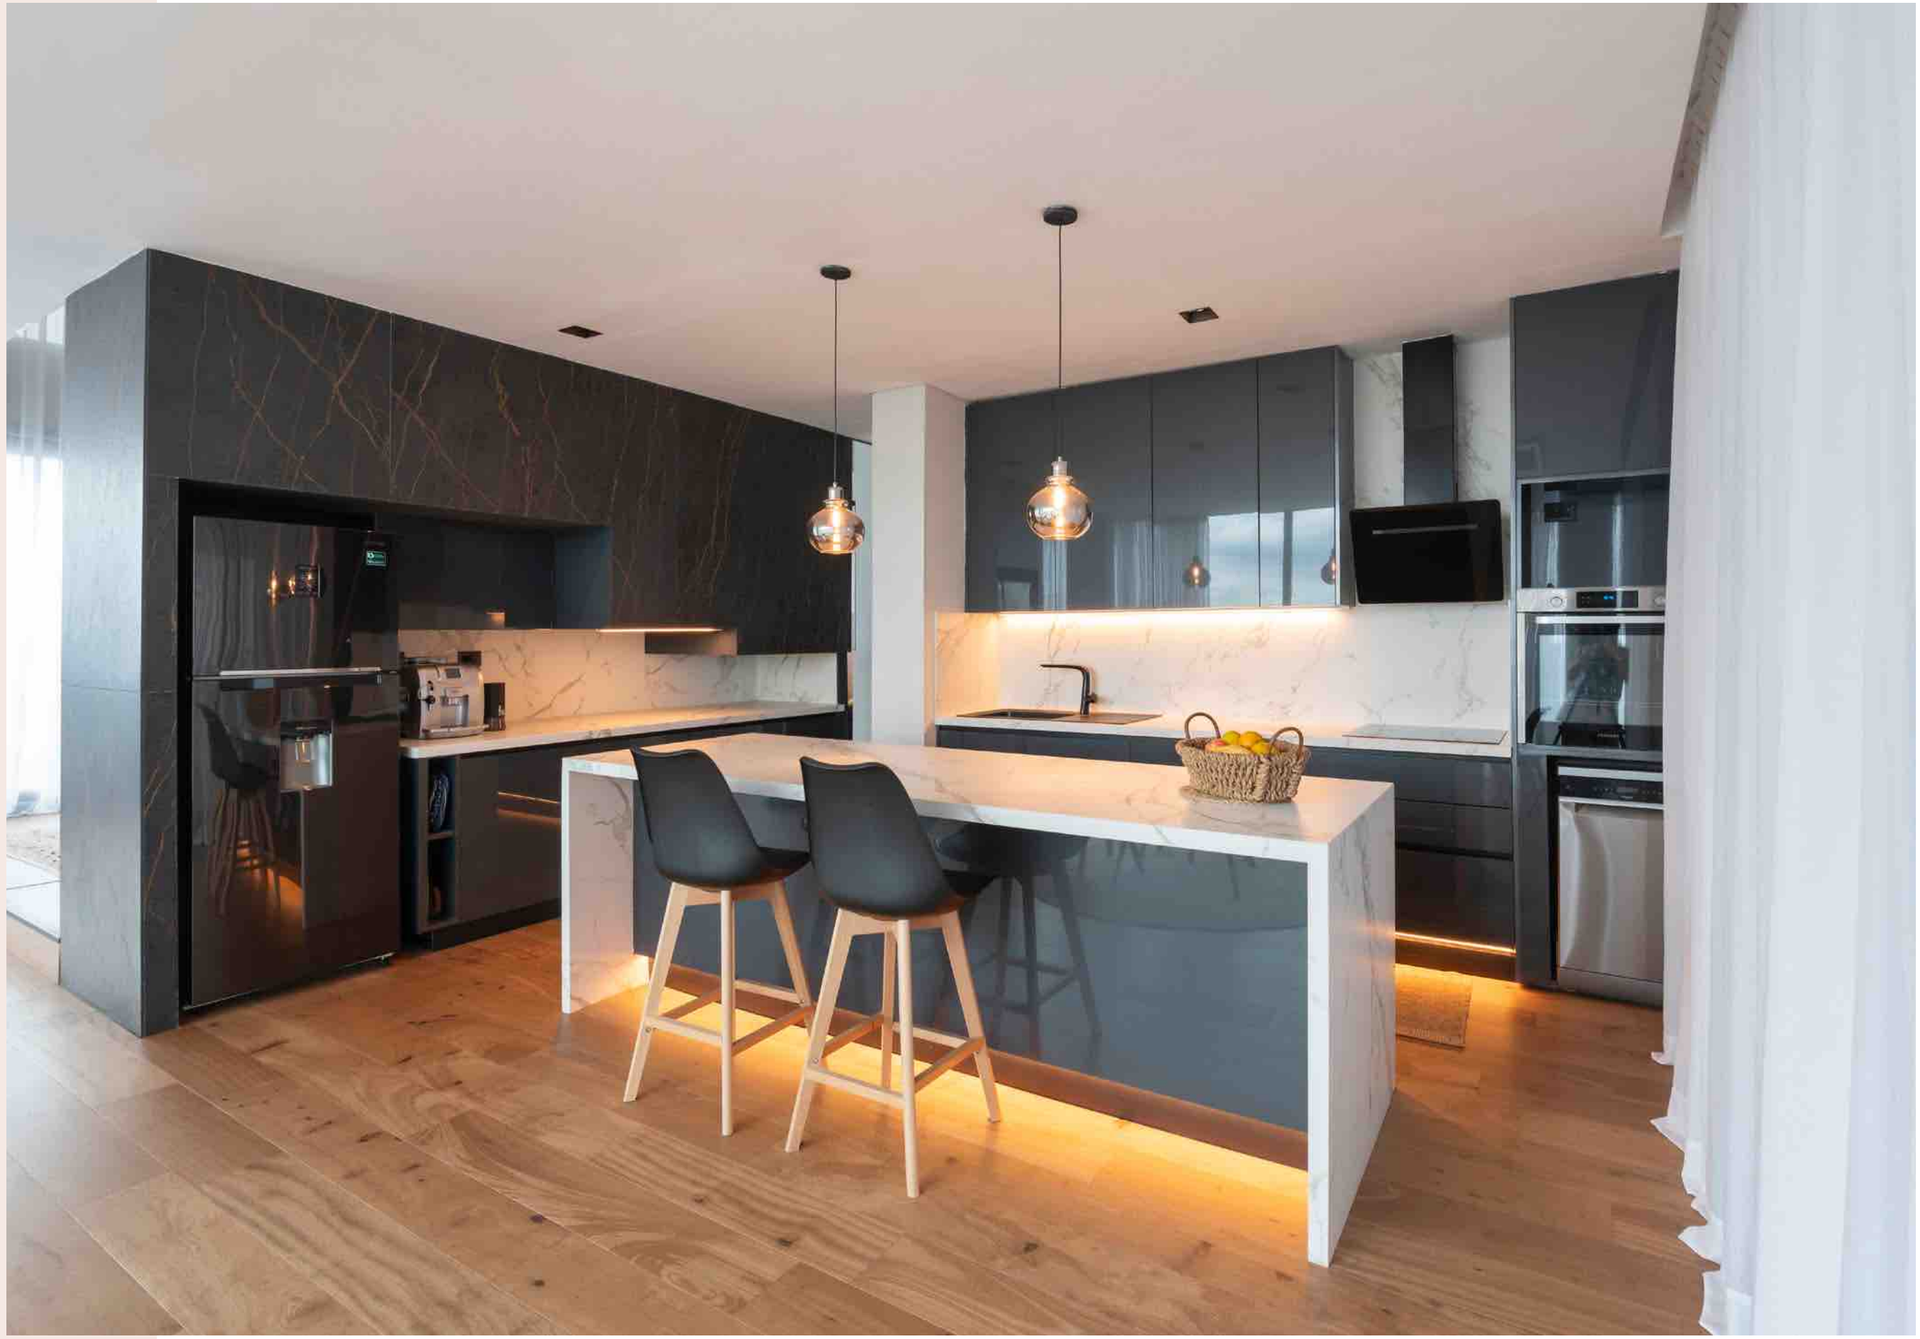

05/ Kitchen Space

Large windows and a simple concept where Dekton and Silestone are the key players.

The abundance of natural light and open spaces, in this house in Argentina, made it possible to use dark colours in rooms where they are not normally used, such as the kitchen, living room and bathrooms. But this project allowed it, and it added a very sophisticated touch to the whole.

The kitchens are spectacular, with a double line consisting of a work area and a peninsula, while the bathrooms are powerful and elegant spaces dominated by the colour black and featuring Silestone Night Tebas, Dekton Laurent and Dekton Aura. “Cosentino materials were chosen for their sustainability features, quality finishes and respect for the end product. These are materials with high hardness, low absorption and wear, high durability and, of course, great aesthetics. And the choice of colours was based on their combination with the furniture, the choice of flooring and their timelessness.”

—

Architecture / Design
Facundo Priotti, Julieta Alaniz

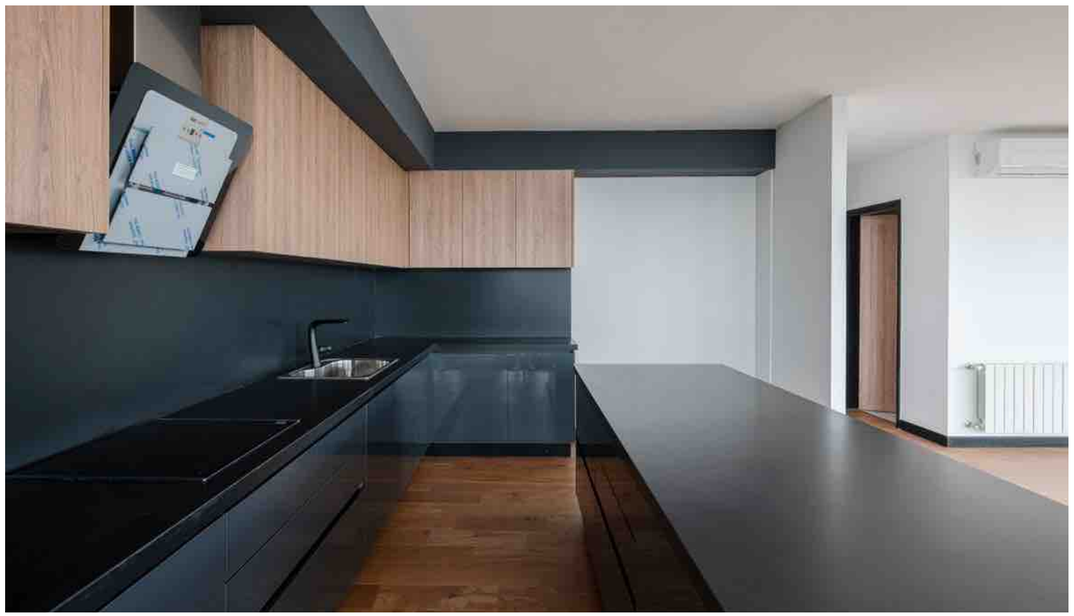

→ Kitchen island, worktop and cladding
Dekton Aura 22

→ Cladding
Dekton Laurent

Elegant and powerful spaces.

With this in mind, the choice fell on Silestone Night Tebas, a pure, captivating, veinless black that is spotless, flawless and shiny thanks to N-Boost technology. In contrast, paying homage to Calacatta and Carrara marbles, the character of Dekton Aura 22 speaks for itself, with its white background crossed by veins reminiscent of these two natural stones. Meanwhile, inspired by the natural stone Port Laurent, Dekton Laurent has a surface texture that creates a play of shades that enhances the contrast of its tones, while its golden veins dominate the space and bring warmth to its dark, cold background, which gives depth to the whole.

→ Kitchen island and worktop
Silestone Night Tebas

06/ Kitchen Space

Dekton's most elegant colours grace this modern flat in a classic style.

In this immaculate setting, where even the doors are tinted white, the kitchen stands out above all for its blue furniture and for being separated from the living room by a sliding glass door with golden profiles, one of this season's favourite interior design solutions.

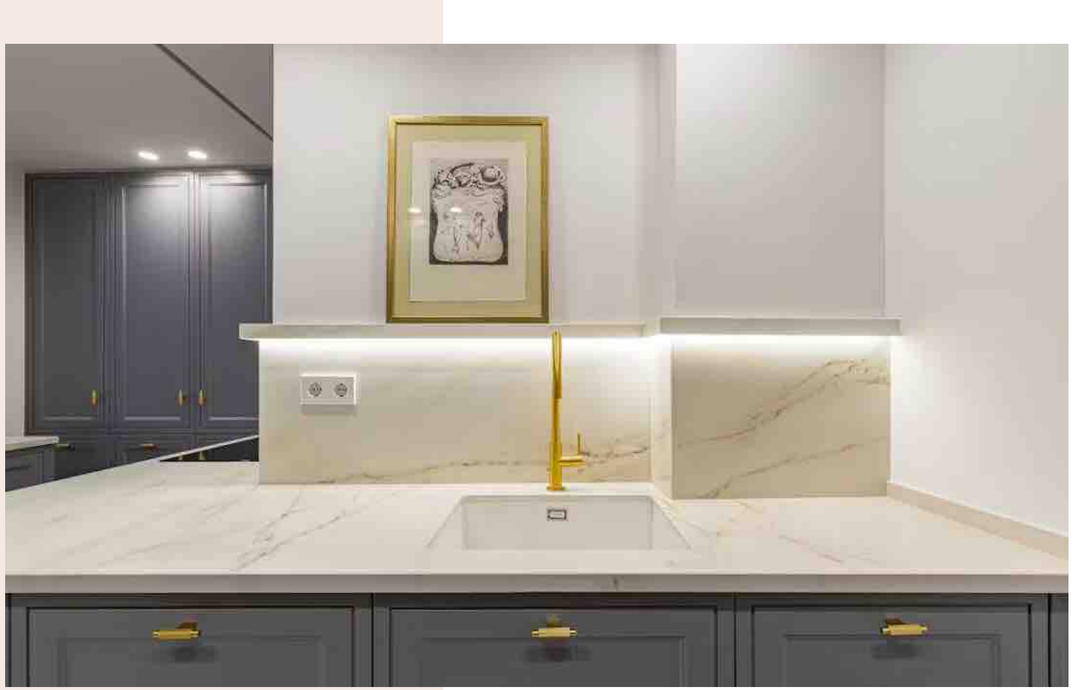

Its colour is matched by the Dekton Rem worktop, which adds interest to the room through the detailed design of its brown and grey veining with touches of gold.

→ Kitchen island, worktop and front Silestone Coral Clay

—

Architecture / Design
Elin Alemdar

07/ Kitchen Space

Silestone Coral Clay graces designer Elin Alemdar's beautiful summer house.

To build her dream summer house, Elin Alemdar chose to stain the wood of the structure white to increase the brightness. Natural wood and beige tones are the main features of the rest of the colour scheme, as can be seen in the kitchen, specifically in the worktop, island and front in Silestone Coral Clay with Hybriq technology. The surface is also used in the living room, where the designer liked the colour so much that she used it to create a cubic pedestal.

08/ Kitchen Space

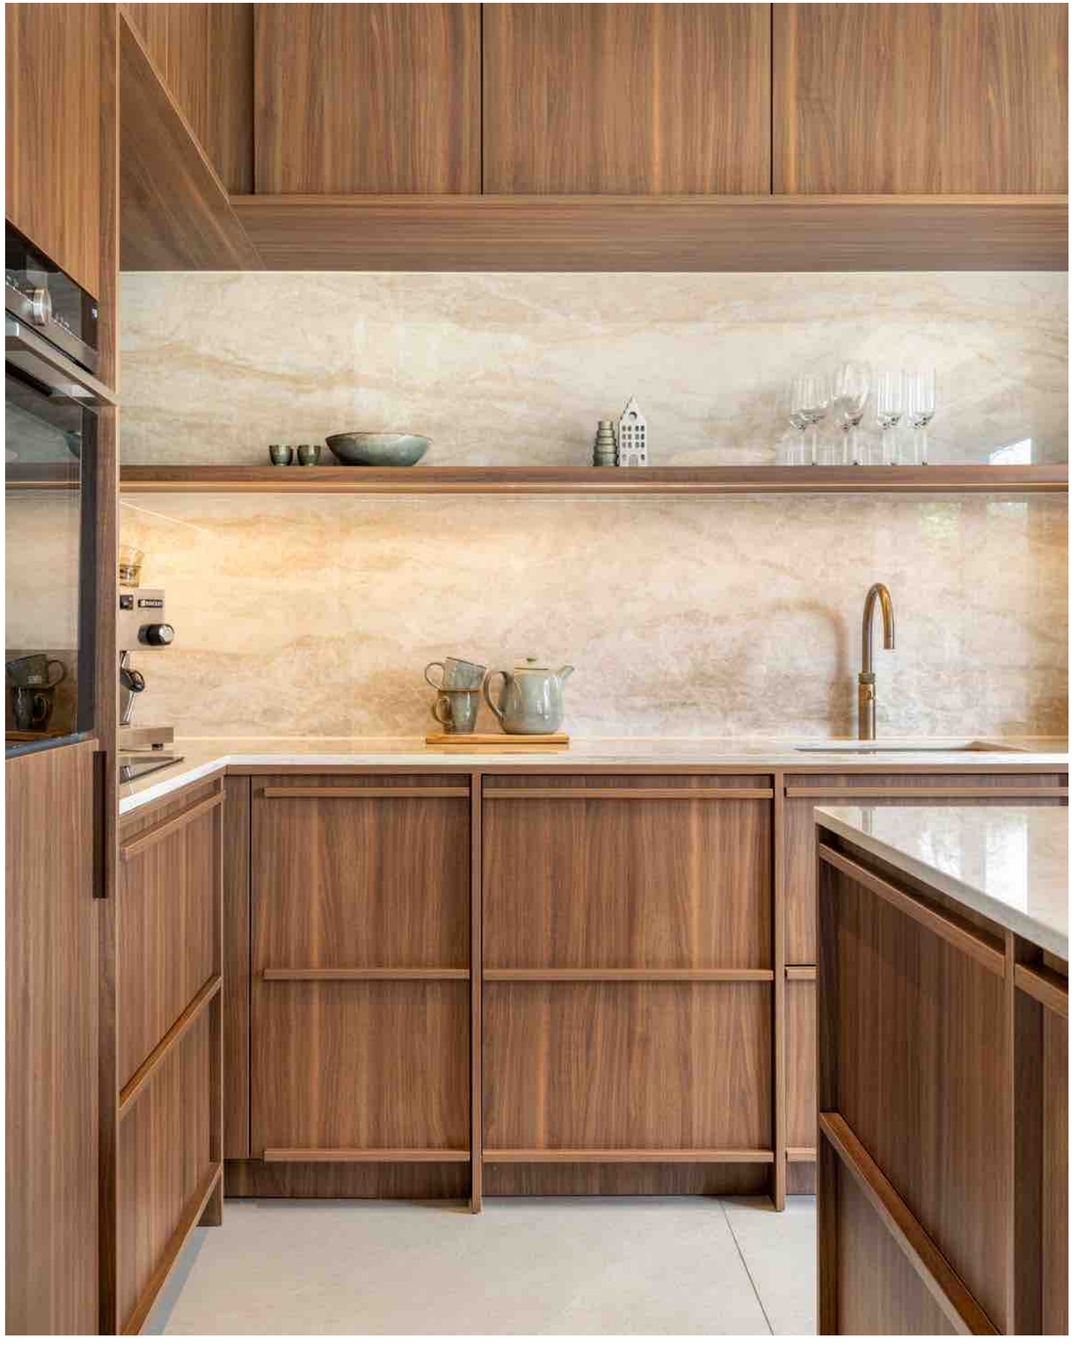

A perfect combination between wood and Dekton.

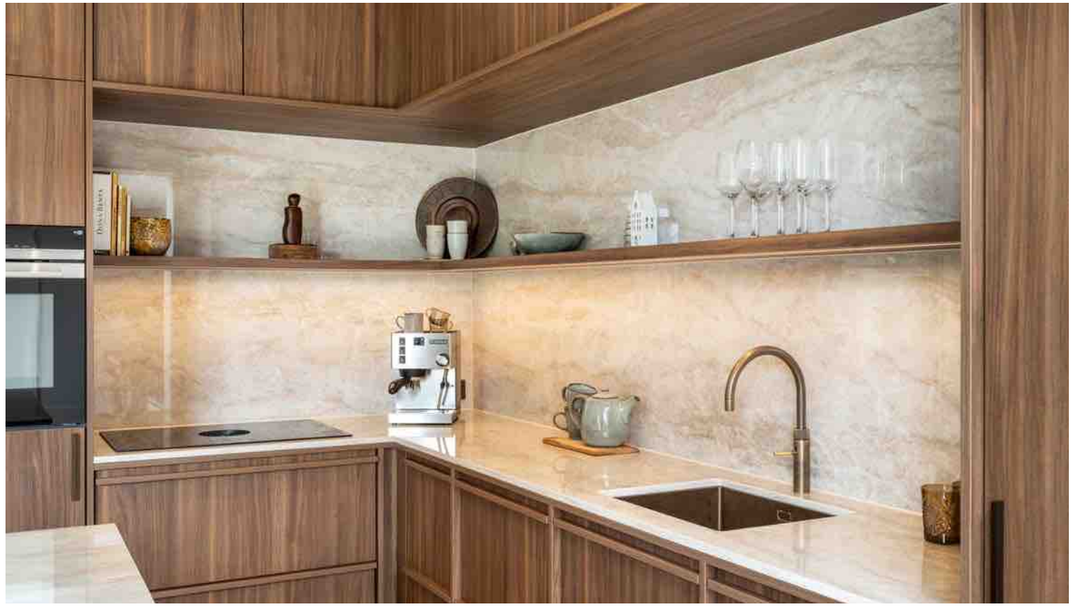

When designing a space, Caroline Rusinek thinks extensively about its multifunctionality: “Our way of life and habits change in a new phase of life and that affects how we deal with our home and spaces. With a more flexible home, you and your home can grow old together.” In addition, an interior must have a timeless basis. Accessories, furniture, and walls that are more easily replaceable can be executed in trend colors.

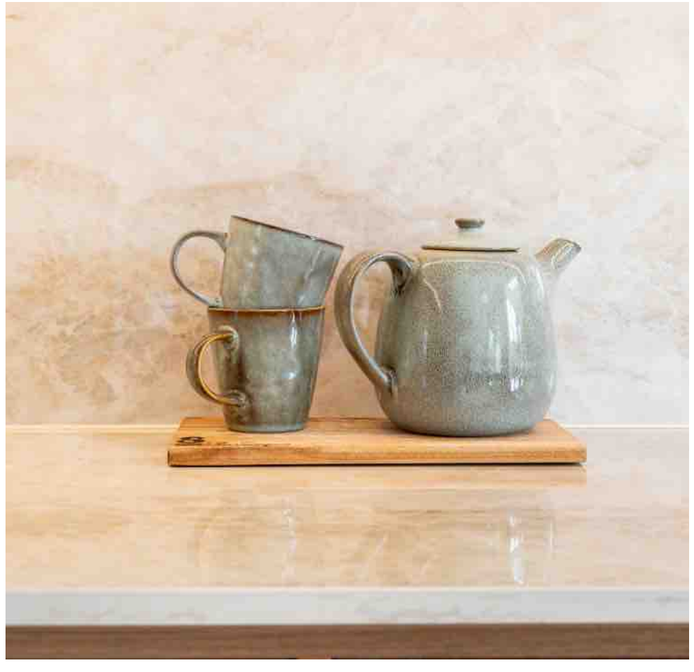

—

Architecture / Design
Caroline Rusinek

The kitchen is equipped with a Dekton worktop, Dekton Arga from the Stonika Xgloss collection. This color also combines beautifully with the walnut wood.

→ Table top, worktop and cladding Dekton Arga

09/ Kitchen Space

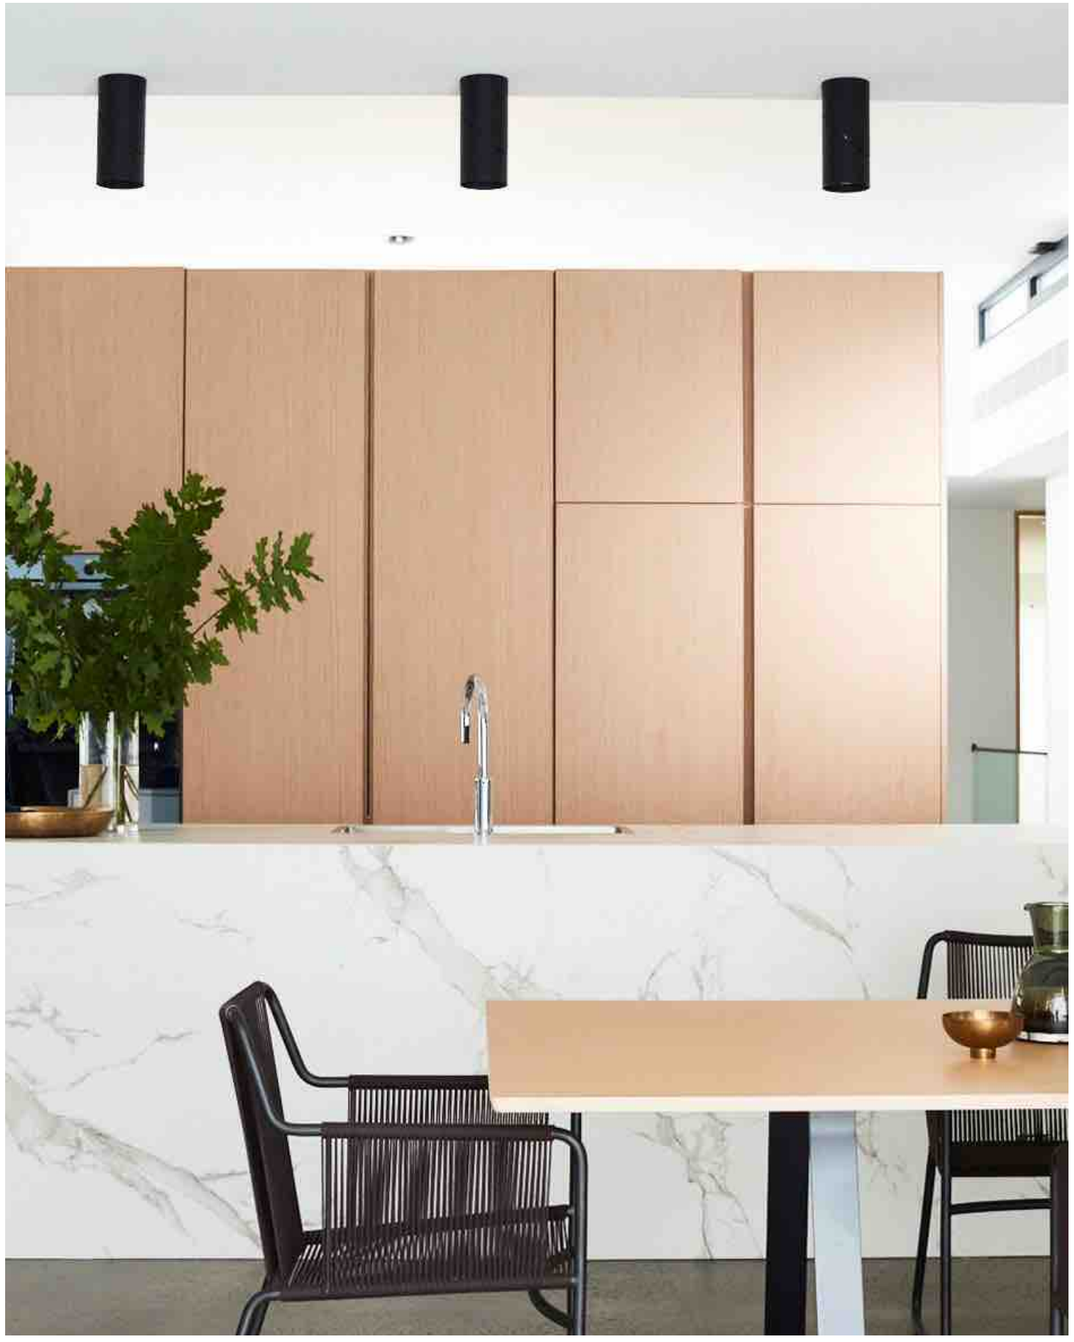

Movement and personality in the kitchen.

In this kitchen, the extra-large island features a built-in sink and extra space for the dining area. In order to achieve visual continuity in such an open space, both the island and worktop are made of the same material, Dekton Aura.

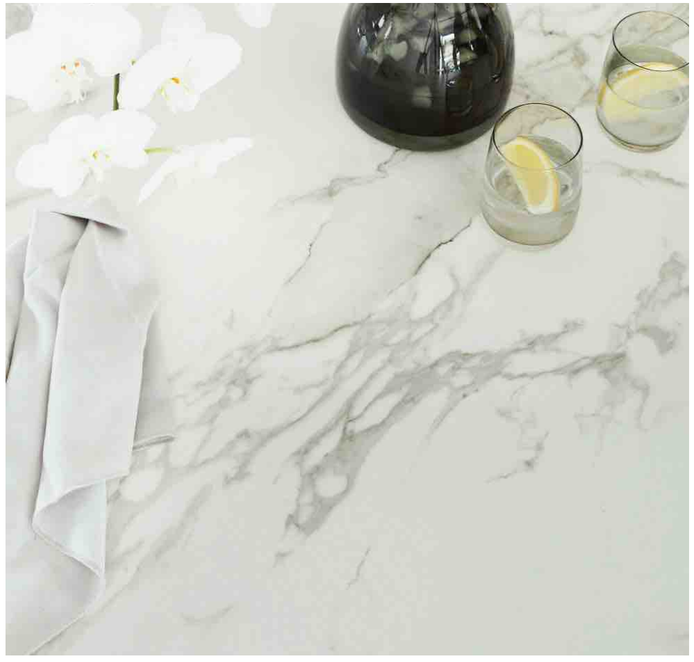

The kitchen is visually separated from the rest of the house by a wall of cabinets, hiding the electrical appliances.

—

Architecture / Design
RJ Arkitektur

Island in Dekton Aura.

The designer chose Dekton Aura for the island and worktop. The use of a classic material with veins in such a well-balanced kitchen brings movement and personality to the room.

→ Kitchen island and worktop

10/ Kitchen Space

A norwegian mountain cabin adorned by Dekton Arga.

Traditionally, mountain cabins are characterized by timber walls and often a dark color palette. But Tonje had other wishes. As the kitchen at home was dark, she wanted the cabin to be bright. The surface she had fallen in love with was Dekton Arga from Cosentino. It is a surface inspired by Taj Mahal quartzite with a dramatic texture of golden brown tones on a smooth cream background. “The rest of the cabin’s interior is based on the delicate tones of Dekton Arga,” says Tonje.

→ Kitchen island, worktop, cladding and table top Dekton Arga

—

Architecture / Design
Tonje Bjerknes

Exquisite and user-friendly surface.

"I get many questions from my followers about how I manage to keep the surfaces so nice without any scratches or stains. The truth is that I don't use anything but a damp cloth and regular soap. Especially the table is being used all the time. Children sit there and bake, draw and paint. The stains disappear easily, says.

Tonje also likes to have cube lights standing straight on the table, even though the candles tend to spill over the table. When it has solidified, it is easy to remove. "There are no stains on the table at all. Dekton makes it easy to keep the cabin both delicate and neat. The surfaces are super practical, durable and spectacular. We are incredibly happy with Dekton," states Tonje.

Silestone Integrity Sinks

Full range of products.

Without joints, cracks, or limits. Integrity wants to unite your kitchen with surfaces don't have an ending or beginning. Integrity brings a sense of unity and perfect integration with the rest of the elements on your worktop. A single piece available in a range of Silestone colors, so your kitchen is endless.

Furniture

Surfaces integrated with unique and timeless furniture design.

Dekton, the furniture's skin.

It's on-trend to use the same cladding on the kitchen or bathroom worktop to clad drawers and wardrobes. This allows you to achieve continuous and clean surfaces where joints disappear, creating a monolithic effect.

This decor trend is only possible with the technological evolution of materials. 8 mm and 12 mm thicknesses are ideal for tables and coffee tables. The slim 4 mm thickness format allows kitchen and bathroom furniture cladding, and also answer the creative restlessness of the designer: table tops for the interior and exterior completely personalized and exclusive.

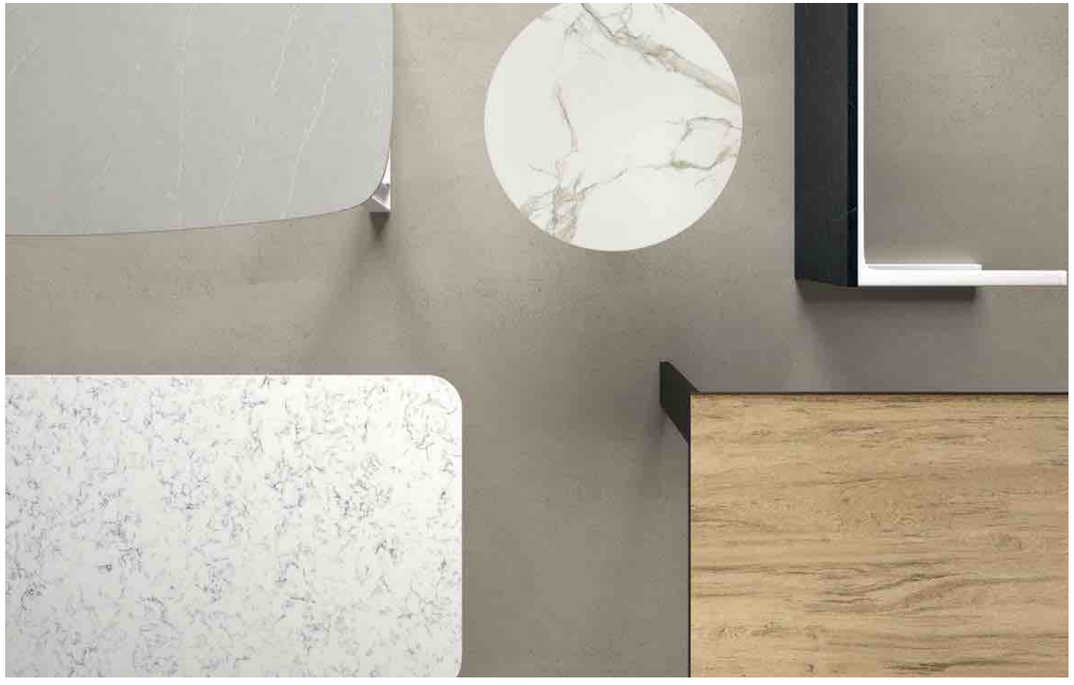

Furniture

Unprecedented durability and design

Cosentino surfaces redefine furniture thanks to their versatility, durability, and beauty

Dekton Slim ha all the advantages and properties of Dekton, high resistance to scratches and stains.

Dekton Slim, 4 mm thickness makes it an incredibly easy material to work with. Its light weight and properties make it the ideal solution to clad all types of furniture and adapt to any aesthetic proposal: in white and gold, in black and chrome...

→ Kitchen furniture cladding Dekton Slim Zenith

Ideal for cladding wardrobe doors and kitchens.

Dekton Slim Zenith and Dekton Slim Opera were the two tones chosen to hide these drawers under the stairs or on the front of the kitchen. The result is a camouflaged surface of this practical storage solution, without compromising the aesthetic of the space.

→ Kitchen furniture cladding Dekton Slim Opera

→ Kitchen furniture cladding Dekton Slim Kreta

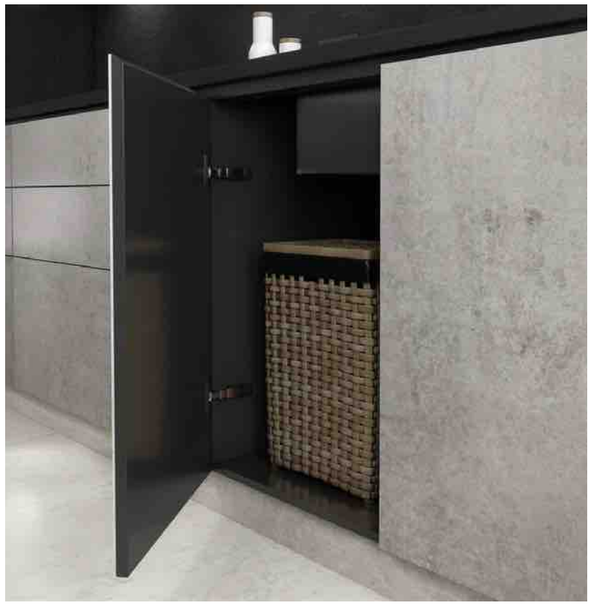

Cabinets integrated into the island.

Dekton Slim is the perfect solution to clad drawers in the kitchen island, achieving a monolithic effect.

For this industrial project, the designer chose Dekton Trilium: a finish inspired by volcanic rock with a touch of oxidation, which adds great character to the space.

Once again, Slim's 4 mm thickness allows the creation of an island totally integrated with drawers.

Dekton Khalo, “a mixture of the Sahara and Norway” for Mona Berntsen, one of Norway’s biggest dance stars.

The living room table and side table are also Dekton in the colour Khalo, made by Milla Studio. “There is a lot of Dekton here, and I like it so much! When we have such an open space between the kitchen and the living room, it’s nice that you don’t get tired of the ultracompact surface. I have become so fond of these beautiful slabs from Dekton. Now I can only look forward to filling the house with friends and family”, says Mona.

A refined design to suit the imagination thanks to Dekton.

“I sketched a low, rectangular-shaped, simple coffee table. I wanted it to be made from a material similar to marble, but not real marble, as its porosity kind of scared me. I fell in love with Dekton Khalo, and thought that a table in that material would be really wonderful and spectacular”, says Yönsini.

Quality chooses quality: leading Dutch brands choose Cosentino.

Borek is a Dutch brand of high-quality outdoor furniture. For over four decades, Borek designs and produces collections that are used in top locations at home and abroad.

Not surprisingly, many well-known designers link their name to this company and design collections for the brand. Dutch designers Bertram Beerbaum and Frans van Rens belong to this select group of designers and for the tables they designed for Borek they chose Dekton by Cosentino for the tabletop.

Lexx by Frans van Rens.

For those who enjoy extensive outdoor dining, drinking and relaxing, designer Frans van Rens has created the unique table series Lexx. The series includes four tables, including a “high dining” table. The Dekton top is available in two chic colors: the light color shade Dekton Rem and the dark color shade Dekton Kelya.

Both indoors and out.

"I designed the pieces with the aim of displaying them both indoors and outdoors. Thus, the sturdiness of Silestone surfaces allows the pieces to shine even in hostile outdoor environments, which means they will be just as comfortable in an outdoor garden as on a lush patio with a balcony," says the designer.

Spacemen Studio, Edward Tan

The Dune Series, the most sophisticated armchair and side table on the market made entirely in Silestone.

In a very challenging project for Cosentino, designer Edward Tan of Spacemen Studio chose the company's products for the Dune Series, an armchair and side table designed to break the mould. Original and groundbreaking, Dune is an ode to movement and sinuous curves and, at the same time, an almost sculptural work of art that does not detract from the comfort of this type of furniture.

Ideal for work spaces.

The properties of Dekton and Silestone make these materials the perfect choice for work spaces. With their endless possibilities in terms of finishes and designs, they add a deco touch to these spaces and create attractive and functional tables suitable to work from home.
